True Holstein cattle are red and white and are found in the province of Holstein, which lies north of the river Elbe. The cattle called Holstein now in America are not Holstein, but Dutch...

When fish manure is pure and dry it is rich in phosphates and nitrogen, containing from six to eight per cent. of the former and five to seven of the latter.

The shipment of canned rabbit meat from New Zealand to England has become quite a business. The meat is packed in two-pound cans, thirty cans to a case.

Speaking of the injury to the hides of cattle inflicted by the barbs of wire fences, the New York Shoe and Leather Reporter says: The introduction of wire for fencing in large tracts of grazing and farming lands has undoubtedly proven a great saving and benefit to the heavy land owners of the West...

Many complain that their tomatoes are sour. All tomatoes are sour, if we may judge from our own observation, that are grown in rich soil. We want a maximum of fruit and a minimum of leaves and stems if we would have sweet tomatoes...

Agriculture.

Never feed your fowls with damaged grain or tainted food. See that the water they drink is clean and good. The cottager whose abode is in the neighborhood of a stream and a common, could not possibly fix on any live stock more profitable than geese.

Many breeders recommend buttermilk as a drink for poultry. It is said to be an egg-producer, and that it also fattens. We know that poultry are exceedingly fond of it, and drink it with avidity.

The business of shipping dressed beef is to be pushed from many new quarters. The latest of these is the head waters of the Missouri, where it is said beef can be killed and shipped at a saving of at least five dollars per head less than sending it alive to Chicago.

At the beginning there is so much to learn, and we know a great many lovers of flowers that are always in difficulties because they do not recognize the fact, that watchful care and unwearied attention are required to make a bed of earth blossom and bud into the myriad glorious hues of perfect flowers.

Lord Sudeley an English nobleman, has gone into the jam business. He is building a large jam factory on his estate at Taddington, in Gloucestershire. Two years ago he planted 93,000 gooseberry trees, 167,000 black currant, 20,000 plum, 3,000 apple, 900 pear, 9,000 damson, 500 cherry, 10,000 red currant, 25,000 raspberry and 100 cobnut, and 52 acres were planted with strawberries.

A Minnesota farmer says that a year ago he sowed in drills, amber sorghum cane and early Minnesota sweet corn for forage, and commenced feeding it early. His stock, both horses and cattle, preferred the corn and ate it first when both were fed at the same time.

Scotch Polled Cattle. The New York Morning Journal thus announces the expected arrival of a herd of Aberdeen Polls: 'A detachment of the Scotch nobility is on its way hither which has not been as widely written about as it members deserve. They are coming to settle, and will be a real addition to our national wealth...'

Time and Expense.

The rapid progress British India is making in the production and exportation of wheat, has recently been brought to notice by the last report of our Consul-General at Calcutta. It appears that about 20,000,000 acres are now devoted to wheat culture in India, with an estimated annual yield of considerably over 200,000,000 bush, of which last year 37,000,000 were exported.

The wheat of America may have in England's Indian provinces a competitor in European markets which will compel the farmers to employ every means to cheapen production, and to railways to reduce the cost of transportation, to maintain a hold upon the foreign demand.

But the most significant fact for the consideration of American wheat-growers, who imagine that they can always control the foreign wheat market, is the result of some recent experiments made in British India, in October last, the Secretary of State for India, instructed a milling firm of London to institute a series of experiments to ascertain how far Indian wheat compared as to the yield and the quality of flour with American and other supplies.

Where to place the Hive. Let the apiary be placed on a dry soil, and, if convenient, in some quiet spot away from the busy routine of the domestic circle. It should be shaded by trees to relieve the little occupants from the scorching rays of a burning sun, and shield them from north-east and strong winds.

Adamson's Botanic Cough Balm is prepared only by FRANK W. KINSMAN & CO., Sole Proprietors. To protect yourself from an imposture, examine the bottle and see that the name of FRANK W. KINSMAN, Druggist, Augustin St., Montreal, is blown in the glass.

Swarming and Hiving Bees.

There is, perhaps, no operation connected with bee culture which is more interesting and exciting than that of the swarming and hiving of bees. There is a rare pleasure in it for the bee master, which is not, perhaps, shared by any other work with the bees, if we may except that of securing a large surplus of honey.

After this 'consummation so devoutly to be wished' has been consummated, and that, after the bees have clustered a thing which they would very naturally do nine hundred and ninety-nine times out of a thousand, an old weather-beaten, split from top to bottom 'bee box' is brought from the garret or smoke-house and is carefully washed out with salt and water, or with some other safe method of cleansing, which ever is thought most agreeable to the bees' affections.

Perhaps a majority of the beekeepers of the present time do not permit their bees to swarm at all, although a great many do, thinking it the best and safest method of increase. When swarming time comes a hive or two should be fixed where we wish them to stand, and provide with either empty combs or frames filled with foundation. Different methods are used of getting the bees to the hive; some use a basket in which they shake the bees and carry it to the hive, while others use what is called a 'swarming box' which is a box made of thin boards about 8 or 9 inches square, and about 14 or 15 inches long, into which a pole is put from the center of one side through the box, and serves for a handle.

Look at the Stock. A good shepherd will count his flock every time he sees them, so will the successful poultryman count his chickens. In this way one sees the first intimation of anything that may be wrong. If the owner of a herd looks carefully over the stock on every convenient occasion, he will find many things to attract notice and that may need immediate attention. It is in this way that disasters are prevented and diseases averted. The owner's eye should take in everything. A cow once fell through a loose plank in a stable floor and broke its leg. It was not until she was down that the owner had been, for even such an injury as this may be remedied. The hired man had seen the loose plank and had forgotten to speak of it. Of course he never thought of repairing it with a few nails. A man that could exercise so much forethought and good judgment as that would not be so careless of his own health. And the owner did not see it. But to see all such things is the owner's business. It is by exercising his brains only that he can earn more money than a laboring man. His eye must take in everything. The smallest detail should be observed, and one who has been in the habit of doing this will be astonished by the many things that will be found worth looking at. This is especially true in a dairy, where every little thing that may go wrong will have an injurious effect upon the yield or the quality of the product; and where the cows, especially, require the closest watching. An accident is always liable to occur, and where there is no neglect, and work is done under a thoroughly careful and observant system, there are no accidents. The last thing done at night should be to go around the stock and see that every animal is all right and safe. The Dairy.

Many horses are actually killed by kindness. Letting them stand in the stable from one week's end to another without any exercise of any kind, because they might hurt themselves, is very injurious. To keep them in the right condition it is necessary that they be exercised every day.
