In case of fever and summer must give them continuous good care timated that had Canadian cattle complaint, milk is now given with exbeen classed with American in this cellent results. The idea that milk is enough to make a generous applicarespect the loss to our people would feverish has exploded, and it is now have been nearly four millions of the physician's great reliance in bringing through typhoid patients, or those in too low a state to be nourished by to nothing without fertility. With solid food. It is a mistake to scrimp plenty of manure the trees are made the milk-pitcher. Take more milk

Farmers Taking Stock.

Every farmer should know just

Scap to Destroy Lice on Cattle.

NO. 31

Lice rarely injure cattle very much during the summer season, while they are running in the pastures. The hair is then short, and it gets a frequent washing by the summer showers, all of which helps to keep lice from increasing much, even though they may be a few left upon some may live several weeks or months in the rubbish of a stable. At any rate, lice are very apt to increase rapidly in a herd of cattle kept in stables after

And it agrees with our experience on the youngest animals of the herd. It is time now to look the herds over for lice, and to use some means for ed the use of some kind of soap.

Preserved Meat. For some time past beef and mutton developed in their growth, and thus at the opening of the season. A con-

The Wheat Crop of the United

States. The Report of the Commissioner of Agriculture, called for by the United States Senate, sets forth that the area of wheat in that country has doubled in sixteen years, the rate of yield increasing in districts where mixed farming and recuperative methods obtain. and decreasing in regions of consecutive crops of spring wheat. The aggregate exports of breadstuffs and animals and their products since 1881 exceeded in value the cotton exported during that period; the amount was more than four billions. The average weight of the wheat crop of 1883 is placed at 57 pounds a bushel. The stock on hand in commercial ware-

ments not first taken from it, yet the brings the most profit to the farmer. fact is undoubted that soils abounding Just so many as can be kept without in clay will endure this exhausting crowding, and with ease and conwhich heavy soils most suffer from is Poultry will not bear crowding any a system of cultivation and cropping more than sheep or pigs or people, which exhausts their due proportion and it is well known that when any of vegetable matter. When this is of these are too closely kept disease gone the labor of tilling is greatly appears and works mischief. It is a

increased as the crop is lessened .- necessity of the case, because cleanliness must be sacrificed to necessity. One of the strong points in preparing horses for spring work is in having their shoulders in a good, sound condition. With this to start with and soft and well-fitting collars there need be but little fear of any difficulty in keeping them all right, no matter how hard the labor the horses have to endure. By keeping the collars well with cold water, there need be but

> If orchardists would seenre continuous returns from their orchards they and frequent fertilization. It is not tion one year, and neglect to do it for several years thereafter. Better fertilize light and often. Care amounts fruitful in otherwise barren years. After all, isn't it more manure for what you have that is wanted, rather

> than more trees? Think of it. There is scarcely a family in the country that cannot add to its income by careful management of a few swarms of bees. The work is light, and much of it may be done by women labor. There are not nearly so many mysteries connected with bee-keeping as were once supposed.

THE FARMER only \$1 per year.

New Five and Ten Cent Store fancy articles, usually costing from 10 to 30 cts., which you can buy at this establishment for 5 and 10 cents each.
