KING'S EVIL Was the name formerly given to Scrofula because of a superstition that it could be

cured by a king's touch. The world is wiser now, and knows that

SCROFULA can only be cured by a thorough purifica-tion of the blood. If this is neglected, the disease perpetuates its taint through generation after generation. Among its Eczema, Cutaneous Eruptions, Tumors, Boils, Carbuncles, Erysipelas, Purulent Ulcers, Nervous and Phy-

sical Collapse, etc. If allowed to continue, Rheumatism, Scrofulous Catarrh, Kidney and Liver Diseases, Tubercular Consumption, and various other dangerous or fatal maladies, are produced by it. Remnants in Homespun, Tweeds, Ducks, Ticking, Swansdown, Cotton, &c., always on hand. Prices away down. In the Red River Valley at \$3.00 per Ayer's Sarsaparilla acre is an opportunity for a profitable never allows to WSE pass; and during the past year a

Is the only powerful and always reliable blood-purifying medicine. It is so effect-ual an alterative that it eradicates from the system Hereditary Scrofula, and the kindred poisons of contagious diseases and mercury. At the same time it en-riches and vitalizes the blood, restoring healthful action to the vital organs and rejuvenating the entire system. This great Regenerative Medicine

Is composed of the genuine Honduras Sarsaparilla, with Yellow Dock, Stillingia, the Iodides of Potassium and Iron, and other ingredients of great potency, carefully and scientifically compounded. Its formula is generally known to the medical profession, and the best physicians constantly prescribe AYER'S SARSAPARILLA as an

Absolute Cure For all diseases caused by the vitiation of the blood. It is concentrated to the highest practicable degree, far beyond any other preparation for which like effects are claimed, and is therefore the cheapest, as well as the best blood purifying medi-

cine, in the world. Ayer's Sarsaparilla, PREPARED BY Dr. J. C. Ayer & Co., Lowell, Mass.

' [Analytical Chemists.] Sold by all Druggists: Price \$1; Six bottles for \$5.

Proper care, gives rise are delusive, because races less, neglected care, or rather lack of an unusual quantity of food a larger feeding and exercise will do much to are not won by knee air-beaters or it. insure success. Mares should be used flashes of speed. It may cost a little regularly, but kindly, until very near more to breed a good stallion than to the time of foaling, and then should a poor one, but the use of the higher be given a large roomy stall, where, priced animal will pay in the end. free from halter, they may secure relief from the violent pains to which will-o'-the-wisps. There are many and to secure it all through the season scalded oats and linseed, and a daily pean war would prove of greater benefit to they are subject the last few weeks. The feed all along should be of oats rather than corn, for the fats are not wanted. Those grains, strong in the phosphates, should be fed to sustain the two distinct, yet united lives. The udder should be bathed after working, and kept free from fluids. Attention should also be given to the condition of the bowels, that, by having all the various organs in a healthy condition, the dam may be kent in the not weigh the good man down. In ed. Beets, turnips and carrots make their first calf. The tendency is inbest possible condition. Good hay, vegetables and oats, should form the chief articles of diet.

After birth, the feed should be to promote the flow of milk, and in the working or exercising, care should be taken not to heat the blood. The de Farmer. sire is to raise the best colts possible, and to do this, there must be steady growth from the day of birth. This can only be secured by keeping the mare in a normal condition. It does not pay to work our brood mares while the colts are small. There is A Barbed and Twisted Steel Ribbon. too much loss of growth in the colt, and it is well to remember that that loss can never be recovered. If the mare is over heated, the milk cannot but be changed, and the colt will suffer. As it grows, demanding more and more, the dam will gradually become weakened, unless the supply of food is proportionate to the drain on the system. When four and a half to six months old, they should be weaned

but before this a small quantity of oats can be fed daily with profit. In this way, we can lay the foundation for future size and service, and make CLARKE, KERR & THORNE, our breeding a source of profit.
