What Handling Indicates. Agriculture

Chicken Fights in Mexico.

Nearly every town of any size has its cookpit, and mains are fought in some place every day. But Sunday gather around the pit. Then the those who have had the most experimen of business, who could not find ence in handling cattle, as strenuously time for the fights on secular days, insist that one of the best tests in de are on hand with their money and termining the quality of the flesh their birds.

twenty five or thirty feet in diameter, generally coarseness of structure in enclosed with a fence some thirty one part is rarely, if ever, allied to inches high, outside of which seats fineness in other parts; a course, are variously arranged for spectators. hard skin, and a dense unyielding Inside the ring some thirty or forty cellular tissue, has never been, and game cocks are tethered by one leg to never will be, found over-lying tender, pegs in the ground, just far enough juicy marbled sparkling flesh. The birds may here be seen, combining have had much experience in the every element of beauty that shape handling of cattle. It may not be and color can produce. Most of the possible to become so skillful as to birds are lithe and trim, while others indicate quality to very great exactare solidly built, yet with no sacrifice ness, but that a knowledge of good of shape. A deep red back with a quality as indicated by touch, or black breast are the prevailing colors, "handling," is desirable, because usethough there are many elegant birds ful, does not admit of question. of golden back and neck whose lustre The handling qualities of cattle, as outshine even the red ones.

is generally some one who has grown moderately thick and the flesh old in the business and knows nothing mellow and yielding to the touch, the two chickens that remain to fight thumb and fingers; when relaxed it ready been made. But this principal elastic shin and mellow touch-indibet, though perhaps the largest in cates a vigorous flow of good blood. golden one, to facilitate the ready cattle are invariably good handlers; making and settlement of bets.

To ROBERT Cowe of the Parish of Stanley, in the County of York, Farmer, a pocket whetstone, the gaffs are weak circulation and unthrifty habit bound upon the birds, one upon a leg Such animals are not profitable feedvirtue of a Power of Sale contained in a certain Indenture of Mortgage, bearing date the natural spurs, but are perfect razors, —a fact which experienced feeders sickle shaped, sharp as possible on and dealers understand; and it is by Stanley, in the County of York, Farmer, of the one part, and Timothy McCarty of the City of and a half inches long. After being of cattle are tested the most when adjusted they are covered with a of the other part, and duly recorded in Book X, 3, pages 49, 50 and 51 of the York County Records, sheath of heavy leather. A line is there will, for the purpose of satisfying the moneys secured by the said Indenture of Mort- then drawn in the centre of the pit, thereof, be sold at Public Auction, in front of the and each man standing on one side. County Court House, in the City of Fredericton, in the County of York, aforesaid. on THURS-DAY, the eighth day of July, next, at 12 Both of them crow, try to peck eagh o'clock, noon, the lands and premises mentioned other, and struggle to get loose. When sufficiently excited to insure the feeder. their rushing at one another each man takes his bird back about six feet from the line, pulls of the leather sheath from the knife and puts it over his ear, like a pen. The Judge confi running along his side line by the magnet of dently pats his bird, while the other A. D. 1874, south 54 deg. 45 min. west, seventytwo chains of four poles each, or to the Felt-wood line, thirteen chains and fifty links to wood line, thirteen chains and fifty links to his to make him mad, and then, per-

How to Test Seeds.

The most satisfactory way to test garden seeds, by amateurs, and also farm seeds generally, is by subjecting number, and ascertain how many will on a board, plate, or in a shallow pap,

Some butchers say that the quality Eggs gain or lose almost as much of beef cannot be told by handling as butter in the packing, and the folthe hair and hide of cattle, or what is lowing instructions given in a recent commonly known as "handling." issue of the Montreal Trade Bulletin, 2.30 time is not within the reach of This matter was fully discussed, and are of value to egg packers that most farmers. Something better is,

is the great day, when the finest birds hide of a fate animal were indications Cases are preferred to any other try raiser, says that his best driving are brought out, when money clinks of the quality of flesh they concealed package for shipping eggs, as they animal consumes daily as much grain the loudest, and the most motley was ridiculed. But on the other hand are handy for re-shipment, besides as his forty-one hens. carried by beef cattle is the "feel of ing them. The time is close at hand keep a heap of it at hand, to be used The cockpit is generally a ring the hide." In the animal kingdom apart to prevent their pecking each other. Magnificent specimens of never be questioned by those who barrel, enough between the different of the wheels, causing them to dish).

described by experienced handlers, The master of the ceremonies, who are said to be good when the skin is else, orders the ring cleared for the springing back to its original position first fight. Each owner takes his when the fingers are removed after rooster under his arm and retires to pressure. It is so also with the skin the outside of the ring, and as soon as itself upon taking it up between the can be seen the outside betting begins. immediately springs back to its The bets between the owners have al- natural position. These conditionsamount, is nothing compared with the The weight of the abdomen, and (in outside bets. A cock fight is nothing the case of dairy cows) large udders without betting, and every one who naturally draws the skin closely over attends feels bound upon principle to the projecting bones of the hips and stale and dirty stock being separated stake something. Special pains are buttocks, and if it be easily movable and shipped in packages by themtaken to match a red cock against a and mellow over these bones, the while if the skin is tight and not After a careful scrutiny of the easily movable, or difficult to lift over edges, to see if they are sharp enough, the hip bones and buttocks, the animal and a slight touching up perhaps with is not a good "handler," indicating a especial care in packing, when barrels both edges and point, and about two such men that the handling qualities ship separately all doubtful stock. they are buying stock to fatten. Herein consists a great advantage which improved cattle has over common stock. The former have been bred to secure these characteristics

The Breeding Boar. James Long, in his "Book of the Pig," says: - A first-class boar, properly used, would improve a herd more than thirty equally good sows. For instance, if each of this number of sows had a litter of six pigs, they would produce 180 young ones. sired by a badly bred boar, more than half the progeny would be inferior to heir dams in consequence of the prepotency of the sire. The old truism, that the boar is worth half the herd, is to day more palpable than ever. A best crib of corn will be that one which person intending to breed pigs should best crib of corn will be that one which has the greatest number of corn evert. It is stated that a pound of butter dressing Voltaic Belt Co., Marshall, Mich. person intending to breed pigs should has the greatest number of ears exact- from a poor cow costs twice as much large the first form. head, which he had easight with his good sire. He should not only visit reputed herds for the purpose, but take notice if the quality of the animals composing them is sufficiently pass it in his perhaps hasty inspection farmers will pay two dollars for feed come bad at a jump. Not all at once do they high and uniform. As a general rule it is customary to obtain the sows be-

> will save them any extra expense. A moderately well bred, or even half-bred sow is ofttimes a desirable animal; she can always be put to a pure-bred boar, and the quality of her progeny will be greatly improved. On the other hand, the slightest blem ish or cross in the blood of the boar not only prevents his regular use by other people, but materially diminishes the value of his progeny. It is admitted by many shrewd breeders that in breeding the boar furnishes the form, quality, and fangy points of a

herd, while the sow supplies the frame and internal structure. Others have remarked that sow pigs take after the sire, and the boar pigs after the dam in their general characteristics .-These ideas can not be correct; still it may be taken for granted that in all pure breeds the base has the greatest influence upon the quality and general good ear and a nubbin. appearance of the offspring.

Treatment of Meadow Land. Reglaimed meadow land, especially peat land, requires frequent applica-Hardwood Ridge; thence running by the mag. cover it with straw paper, over which tions of manure, the quantity of which But a robust, powerful field corn, net of the year 1859, south forty-nine degrees east the seed is sprinkled. Cover this at each application may be light. which shall be the counterpart in vethirty-one chains to a stake; thence north the seed is sprinkied. The forks, etc., etc. For sale Wholesale and Retail.

Then the cows were examined and companions and thrifty when finally they are left they were found to be in a feverish condition, the result of their blood.

So started thus determined. Still another way is to fill a pot with sandy soil. make strength of the sheep and keep them culæ. Then some pure milk was strength of the sheep and some of the pond water put. I hardly knew how to contain myself. I was all over the house. I am gaining strength each day, and can walk quite safe without any "Stick!"

How to Ship Eggs.

on one side the idea that the hair and should not be forgotten :sively, and on this style of package a tered over the floor after cleaning will actual settlers amounted to \$4,143,866. Durgreat deal requires to be said. When render the air of the apartments pure ing ten years the expenditure on account of ordinary flower barrels are used, not and wholesome. barrel, and great care should be taken and also to keep out the water. so that they do not come in contact by at least an inch. Whilst arranging the various layers, every two or three tiers of eggs should be well settled by shaking the barrel and slightly pressing. Great care should also be observed in having the head pressed as firmly as possible on the straw packing, without of course breaking the eggs, in order to prevent them working loose in the barrel by handling. Never use damp or musty straw, as the sale of eggs is often spoiled by the unheading of the barrels thus packed, which has the effect

of scaring buyers away, although the eggs may be fine stock. Packers should see that their eggs are of uniform quality, fresh and clean, the selves, if they must be sent forward great care should be taken to distinguish them by a special mark which the consignee should be advised of. To recapitulate; shippers should take or boxes are used, and secure them against shifting so as to go through ing cracked or chipped eggs with
