The First Sign

Of falling health, whether in the form of Night Sweats and Nervousness, or in a sense of general weakness, Loss of Appetite, should suggest the use of Ayer's Sarsaparilla. This preparation is most effective for giving tone and strength to the enfeebled system, promoting the digestion and assimilation of food, restoring the nervous forces to their normal condition, and for purifying, enriching, and vitalizing the blood.

Failing Health.

Two years ago my health began to fail. I was troubled with a distressing Cough, Night Sweats, Weakness, and Nervousness. I tried various remedies prescribed by different physicians, but became so weak that I could not go up stairs without stopping to rest. My friends recommended me to try Ayer's Sarsaparilla, which I did, and I am now as healthy and strong as ever.—Mrs. E. L. Williams, Alexandria, Minn.

Dyspepsia Cured.

It would be impossible for me to describe what I suffered from Indigestion and Headache up to the time I began taking Ayer's Sarsaparilla. It was under the care of various physicians and tried a great many kinds of medicines, but never obtained more than temporary relief. After taking Ayer's Sarsaparilla for a short time, my headache disappeared, and my stomach performed its duties more perfectly. To-day my health is completely restored.—Mary Harley, Springfield, Mass.

Ayer's Sarsaparilla,

Prepared by Dr. J. C. Ayer & Co., Lowell, Mass.

Price 25c per bottle, 65c per dozen.

WOMEN

For "worn-out," "run-down," debilitated, and overworked women generally, Ayer's Sarsaparilla is the most effective and reliable remedy. It is a powerful general as well as a specific cure for all the ailments which attend the weakness of the system, and the impurities of the blood. It is a powerful general as well as a specific cure for all the ailments which attend the weakness of the system, and the impurities of the blood. It is a powerful general as well as a specific cure for all the ailments which attend the weakness of the system, and the impurities of the blood.

Agriculture

Quebec Farming.

A recent trip of 140 miles from my home, says a correspondent of the New England Farmer, to the city of Quebec, and a three days' attendance upon the Provincial Exposition,—"or, as we should say, "State Fair,"—has enabled me to gather something which may be interesting to the general reader. The city of Quebec is between 350 and 400 miles north from Boston. Perhaps most of your readers will be surprised when I tell them that in the whole district traversed, I saw few farms poorer than those classed as best in Massachusetts. The entire country is a rolling plain, much like Maine between Waterville and Bangor, but far less rocky, and with more like the New England plain. The plain is traversed, from the American boundary to the St. Lawrence river, by two streams,—each rather smaller than the Merrimack,—the St. Francis and the Chaudiere. The watershed between them is but slightly elevated, and there are no heavy grades. The lines of the two railroads traversing it—the Grand Trunk and the Quebec Central.

The Rabbit Pest in Agriculture.

Among the "nuisances" from which American farmers are free, and from which we hope they may always be free, is that of rabbits, which are a great pest in the countries where they exist in large numbers. Paradoxically Australia is so overrun with them that they are a nuisance, and their destruction has for some time past received the attention of the government. The colonies depend largely on stock-raising and agriculture, and the rabbits being as destructive of the cultivated crops as of the native pastures, a question of man holding the rabbits in check or moving out of the country himself. And so the government has been able to take the matter in hand. The reports of the inspectors charged with the duty of destroying the rabbits, and that 515,884 animals were gotten rid of, and a larger number of man would have been employed (up to 1,945, for which estimates have been made), but they could not be obtained at that season of the year. This must entail an enormous expense, but even more vigorous measures seem necessary, since in many districts the "pest" is reported as still on the increase, and in others at a standstill, while only in about one-third the territory is reported as diminishing. The rabbit is reported as an animal of astounding fecundity, coming to a breeding age in six months, and producing from five to eight young in a litter every three weeks. It is estimated that the produce from a single pair, if unchecked, would in the short period of four years reach the enormous number of 1,230,000.

Worms that Eat Steel Rails.

The existence has just been discovered of a detestable microbe which feeds upon iron with as much gusto as the phyloxera upon the vine, and which has done considerable damage to the steel rails employed on the railroad at Hagen by the accidents occurring always at the same place, proving that some terrible defect must exist either in the material or the construction of the rails. The German Government directed an inquiry to be made, and a commission of surveillance to be appointed for the purpose of maintaining constant watch at the spot where the accidents—some of them attended with loss of life—had occurred. It was not, however, until after six months had elapsed that the surface of the rails appeared to be corroded, as if by acid, to the extent of 100 rods. The rail was taken up and broken, and it was then discovered that a thin grey worm, to which the qualification of "rativorous" was assigned, and by which name it is to be classed in natural history. The worm is said to be only ten minutes upon the length and of the size of the pin of a fork in circumference. It is of a light grey color, and on the lead carries two little glands filled with a corrosive secretion which is ejected on the surface of the rail which is expected to be corroded. The liquid renders the iron soft and spongy, and of the color of rust, and it is then gradually devoured by the insect. There is some speculation as to the official report of the commission, "in the assertion that this creature, for its kind, is one of the most voracious, for it has devoured thirty-six kilograms of rail in a fortnight."—*Cologne Gazette.*

ALL SORTS.

A SAXON PROVERB.

There is a jolly Saxon proverb that is very much like this, That a man is never so happy When he has a woman's kiss; But there's danger in delaying, And the sweetness may forsake it; So, I tell you, bashful lover, If you want a kiss, why, take it.

Never let another fellow Steal a march on you in this; Never let a laughing maiden See you spoiling for a kiss; There's a royal way to kissing, And the jolly ones who make it Have a motto that is winning, If you want a kiss, why, take it.

Any fool may face a cannon, Anybody wear a crown; But a man must win a woman, If he'd have her for his own. Would you have the golden apple, You must find the tree and shake it; If the thing is worth the having And you want a kiss, why, take it.

Who would burn upon the desert With a forest smiting by? Who would give his sunny summer To the sweetest part of loving, Is to want a kiss and take it.

To fool with a bee calls for a stinging rebuke, To play with a lion calls for a lion's paw; There are many Cures for Malaria, but only one Allan's Lung Balsam; it is Little by little fortunes are accumulated; little by little knowledge is gained; little by little character is achieved.

The PRUFERRE we consider to be at once the most delicate and most enduring—"Lotus of the Nile."

Can a wife who conquers her husband with a broomstick be said to have gained a sweeping victory over him? Holloway's Corn Cure is the medicine to remove all kinds of corns and warts, and only costs the small sum of twenty-five cents.

Mrs. Barker of Dundee, Scotland, founder of the British Women's Temperance Association, is going to show 1,000 Scotch women to California to be domestic servants.

"According to an old blue law a husband could not kiss or caress his wife on Sunday. What would you have done, darling, if you had in those days a bottle of Nervo-Cura?" "I would have laid in a stock Saturday night."

When symptoms of malaria appear, in any form, take Ayer's Cure. It will prevent a development of the germs of disease, and eradicate them from the system. A cure is warranted in every instance.

Nervous old lady, on the fifth floor of hotel—"Do you know what precautions the proprietor of this hotel has taken against fire?" "Porter—"Yes, mum, he has the house insured for twice what it's worth."

Mr. Henry Marshall, Revue of Dunn, writes: "Some time ago I got a bottle of Nervo-Cura, and I consider it the very best medicine extant for Dyspepsia. This medicine is making marvelous cures in Liver Complaint, Dyspepsia, etc., in purifying the blood and restoring manhood to full vigor."

Lovers are prone to self-depreciation. She is tenderly, as they sit looking at the stars: "Some time ago I got a bottle of Nervo-Cura, and I consider it the very best medicine extant for Dyspepsia. This medicine is making marvelous cures in Liver Complaint, Dyspepsia, etc., in purifying the blood and restoring manhood to full vigor."

Attracted with cholera of summer complaint of any kind, send for a bottle of Dr. J. D. Kellogg's Dietsary Cordial and use it according to directions. It acts with wonderful rapidity in subduing that dreadful disease that weakens the strongest man and that destroys the young and delicate. Those who have used this cholera medicine say it acts promptly, and never fails to effect a thorough cure.

The commencement in the use of gunpowder is involved in obscurity. It does not appear to have rivaled the use of the cross bow till the reign of Edward III. He repudiated the earliest date mentioned of its use in England. It was many years before it actively superseded the old method of propulsion.

A female servant sweeping out a bachelor's room found a fourpenny piece on the carpet, which she carried to the owner. "You may keep it for your honesty," said he. A short time afterwards he missed his gold pocket case and inquired of the girl if she had seen it. "Yes, sir," was the reply. "And what do you do with it?" "Kept it for my honesty."

A Severe Trial. Frances S. Smith of Emerald, Mashpee, writes, "I was troubled with vomiting for two years, and I have vomited as often as times a day. One bottle of Burdock Blood Bitters cured me."

"Do you think, Miss Clara," he asked, with infinite tenderness in his voice, as he handed her the bill of fare, "that one's appetite is affected when one is in love?" "I have no doubt of it," she replied, scanning the bill of fare, and then she turned to the waiter and said, "Roast beef, please, with plenty of fat, and mashed potatoes, corn, parsnips and boiled onions."

O. C. RICHMOND & Co. Dear Sir, I cannot find words to express my thanks to you for your good advice and valuable Liniment that you gave me on board of the S. S. St. Pierre. The foot that you and the other gentlemen saw so severely crushed by the falling of such a heavy anchor on it, I am glad to say is now nearly well; yesterday I was able to go out on the street, and after a few days' more it will be as well as ever. It was the opinion of some of our skillful doctors here that I would not be able to move for six weeks, but I am happy to say that your Liniment has set me on my feet, and by applying it has restored it back without pain or trouble, only according to the directions on the bottle. For the future I shall not be without it either at sea or on shore.

Yours truly,

HALIFAX, N. S. MICHAEL PARLAN.

Having thoroughly tested the great value of lemon juice as a physician, we feel that we are doing a service to recommend the free use of this juice, and to tell how to do it. One writer says, "let us, to tell how to do it, let us start the stomach by eating lemon juice, the powerful acid of the juices, which is almost corrosive, inflames the mucous membrane of the stomach, but produces inflammation, and does not burn or draw the throat, it does its medical work without harm, and when the stomach is clear of food has abundant opportunity to work on the system's morbid matter. Most people know the hot fit of lemons before breakfast, but few know how it is more than doubled by taking another at night also. The way to get the best of a bilious system with blue pills or other pills, is to take the juice of one, two or three lemons, as the appetite craves, in as much water as will wash it down, and without sugar before going to bed. In the morning on rising, or at least half an hour before breakfast, take the juice of one lemon in a goblet of water. This will clear the system of humors and bile with mild success without any of the weak-knee effects of drugs."

Asthma.

Persons who have suffered for years with Asthma will find a quick relief and cure in the double treatment of Southern Asthma Cure.

THE WOODSTOCK EXHIBITION.

The Official Programme for the event which opens Oct. 5th.

An Agricultural and Mechanical Exhibition will be held in Woodstock on the fifth, sixth and seventh days of October. The daily programme is as follows:—

OPENING DAY—Wednesday, October 5th: Formal opening at 2 o'clock, p. m., by His Honor Sir S. L. Tilley, C. B., K. G. M. G., Lieutenant Governor of N. B., attended by a guard of honor. It is expected that members of the Board of Agriculture of N. B. will be present at the opening ceremonies.

A concert will be given in the exhibition building in the evening, commencing at 8 o'clock. A number of talented musicians and vocalists will take part in this entertainment, which is expected to be under the Governor's patronage, he having promised his health permitting—to open the exhibition as above mentioned.

Second Day—Thursday, October 6th: Forenoon—A trial of draft horses will commence at 10 o'clock a. m.

AFTERNOON—An exhibition and test of the speed and endurance of the driving horses, on the race course, will commence at 2 o'clock, p. m.

EVENING—A Musical and Literary Entertainment, including addresses, by prominent members from abroad, in the exhibition building, commencing at 8 o'clock.

THIRD DAY—Friday, October 7th: A grand parade of the prize animals (horses and cattle) will take place on the race course, of the Trotting park, at 10 o'clock, a. m.

AFTERNOON—A game of base ball between the Woodstock nine and a foreign nine. Prizes will be distributed during the afternoon.

This programme is not quite settled, but, if at all, it will only be changed in few particulars. A very extended prize list has been prepared and the total value of the prizes given will be a large sum.

A special prize of \$500 will be given for best Butter made by a woman under 25 years of age, the whole process of milking, churning and making to be performed on the grounds.

A special prize of \$500 will be given for the best Essay on "The Duties of the Farmer," \$200 for the second best, and the Woodstock Free one year for third. All the essays to be sent to the disposal of the proprietor of the Press.

There will be excursions from various parts of the Province, over the New Brunswick and the Northern Railway, to the exhibition, as well as from different points in the State of Maine.

A Warning Dream.

The following story is told as true by Mrs. Lucy H. Hooper in the Philadelphia Telegraph: Since we are on the subject of supernatural, I will here record the very singular adventure of a lady who is a resident of the interior of Pennsylvania. She was travelling in a stage-coach, and was in London she dreamed one night that she was visiting prominent points of interest in that city in regular tourist fashion. But where she went she met the same man, and he always asked her his ever-recurring question, "Are you ready?" Go where she would, and do as she liked in every scene in her dream she met the same man, and he always asked her his ever-recurring question. She was considerably impressed by this dream, and remarked to the lady to whom she related it that she should never forget the face of the man that had so persistently appeared before her. Time went on, she returned to the United States, and went to pay a visit to one of the large cities, stopping at the most noted hotel in the place. She was lodged on one of the upper floors, and went down to breakfast the morning after her arrival. At the conclusion of her breakfast she went to the elevator and entered it with the purpose of returning to her room. She was the only person in the elevator, and the man in charge of it, before starting it, turned to her with the question, "Are you ready?" Struck by these words she looked at the man, and instantly recognized the hero of her singular dream. She was seized at once with a vague sense of uneasiness, and she said to the man, "What do you mean?" "Let me out!—you must let me out!" The elevator being already in motion, no release was possible till she reached the first floor. She hurriedly descended, and when she reached the man started to go down, and instantly the elevator and its unfortunate guide fell with a crash to the cellar. The poor man was instantly killed, and the dreamer had probably saved the dreamer from a similar fate.

Worms that Eat Steel Rails.

The existence has just been discovered of a detestable microbe which feeds upon iron with as much gusto as the phyloxera upon the vine, and which has done considerable damage to the steel rails employed on the railroad at Hagen by the accidents occurring always at the same place, proving that some terrible defect must exist either in the material or the construction of the rails.
