MANCHESTER HOUSE.

JUST OPENED. 25 Doz. Doz. Ladies' Bonnets, and Hat Shapes.

The Provincial Exhibition.

Visitors to the Provincial Exhibition which closed on Saturday last, and who were in any way familiar with St. John could not be otherwise than impressed with the contrast between the southern extremity of the city as it appeared last week, and its aspect a dozen years since.

The changes that had been effected were, indeed, important. The great fire had, of course, wiped all the old buildings off the grounds and nothing had been restored as it was before.

At first it was intended to make the Exhibition a Provincial affair only, but subsequently, after the buildings were designed, it was decided to open it to exhibitors from Nova Scotia and Prince Edward Island also.

On entering the Main Building, soaps, mineral oil and its products, and tobaccoists' goods claimed attention.

Messrs. J. & D. Howe and C. E. Burnham & Co. also displayed attractive lots of furniture which could not fail to be remembered by those who saw them.

The following is an abstract showing the totals of each class of animals entered:

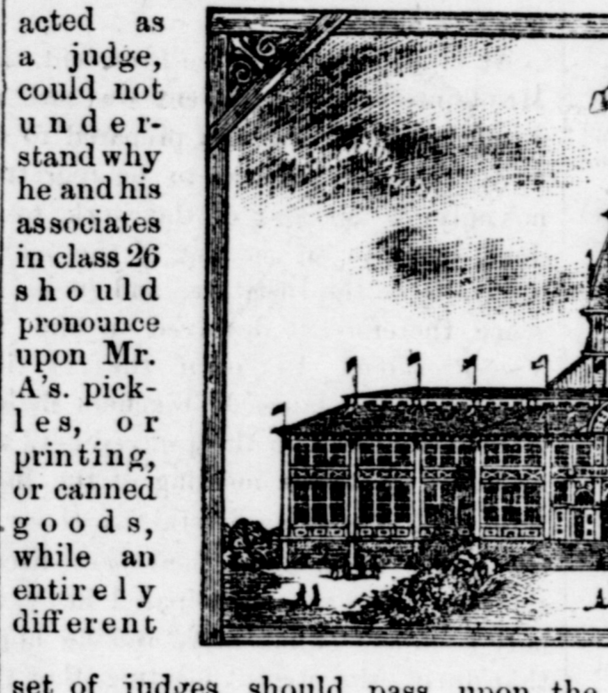

Table with columns: Entries, Horses, Cattle, Sheep, Swine, and various sub-entries like Trotting, carriage or road, Draught or agricultural, etc.

The display of fruit was good, though not as well arranged as it might have been. Mr. Grosvenor, Messrs. Campbell, Mr. S. L. Peters, were the principal exhibitors.

Passing to the south, in centre of the building there was a fine display of crabs, by Messrs. Price & Shaw, Kidd, Kelly & Murphy and L. H. Miller & Co. of St. John and Eben Price & Shaw and Kelly & Murphy seemed to lead in this line.

dred exhibitors. There was an evident design on the part of the management to arrange the exhibits with regard to class, but owing, no doubt, to the unexpectedly large number of entries, and the difficulty of finding space for them all, method and order were, to some extent sacrificed, to secure satisfaction as far as possible in more absolutely essential particulars.

acted as a judge, could not understand why every one of this gentleman's display was the largest and most varied, as well as the most meritorious.

set of judges should pass upon the same kind of articles exhibited by Mr. B. The management, having "mixed those children up," however, and got rid of the judges, can easily lay the blame of all short-comings at the door of the latter, and show their gratitude, to them by stating through the papers, that dissatisfied exhibitors will have everything rectified by that perfect organization—the management—and that all misapprehensions as to their duties by the judges. It is to be hoped that Mr. Inches, the overworked Secretary for Agriculture—the over-undertakings were certainly greater than his age and experience warranted—has kept a notebook in which he has made memoranda of things done amiss at the Exhibition of 1880, the repetition of which may be avoided at our next Exhibition.

prize and diploma that were awarded to it. Mr. Favett's kitchen stoves and ranges, parlor stoves, portable furnace, etc., even without his base-burners, were sufficient to place him ahead of all competitors.

In the galleries of the main building there was an extensive variety of lighter manufactures, works of art, etc., of which we have space to mention only a few. Messrs. Ganong Bros. of St. Stephen had a splendid exhibit of staple and fancy confectionery, which was justly awarded first prize and Messrs. Woodburn & Co. of St. John also made a creditable display of staple goods in the same line.

Mr. Ready of Fairville, who has a branch establishment at Chatham, showed a lot of lager-beer put up in patent stoppered bottles for family and table use and for easy transportation. The judges, having tested its mode of manufacture, from pure grain and hops, awarded Mr. Ready first prize and a diploma. They considered this beer preferable on account of purity, to the aerated waters and expressed their satisfaction on learning that it was largely sold in Fredericton where the Scott Temperance Act is in operation.

Messrs. J. & A. McMillan showed samples of first class book-binding, in both blank and printed books. This exhibit, covering a wide range of work, was awarded first prize and diploma. Mr. Cropley of Fredericton exhibited a case of blank books from his bindery, which were of highly creditable workmanship and excellent materials.

A modest but very meritorious exhibit of job-printing was made by Messrs. Ellis, Robertson & Co. of the Globe establishment. The workmanship was first class in every respect and would reflect great credit on a more pretentious house.

Messrs. Stewart & White's furniture display was much and respectfully admired, especially that portion of it embracing two bedroom sets at \$1,000 and \$500 respectively. These as well as the other exhibits of this firm were all of their own manufacture.

Messrs. J. & D. Howe and C. E. Burnham & Co. also displayed attractive lots of furniture which could not fail to be remembered by those who saw them.

Messrs. Parks' display of cotton goods was one of which St. John might be proud, as it represented the products, of the best factory in its lines in the Dominion.

We should like to notice many more exhibits, in the Agricultural and manufacturing departments, but are obliged to pass on for the present to the stock yard.

of St. John manufacture which, for volume and smoothness of tone, together with first class mechanical appearance could not well be surpassed. The quality of these instruments was a pleasant surprise to very many visitors.

Messrs. White Bros. showed an attractive line of pottery goods of their own manufacture, including tobacco pipes, plain and fancy flower pots, tiles, etc., for which they received first prize and a diploma.

Mr. Lokerby, formerly of Chatham was one of the most active (with the tongue) of the Exhibitors. He had his patent Refrigerators for a text and a very good one they were. The sermons were, however, so long at times that the congregations grew tired.

Messrs. James Harris & Co. showed some splendid marbled mantles as well as stoves and other iron work.

The best stove exhibit was by Mr. Favett of Sackville, whose base-burners

was awarded second prize for canned mackerel and frozen salmon.

The second prize for canned lobsters was awarded to the Kent Packing Company.

Donald McMillan, sr. of Black Lands, Restigouche, received 2nd for white oats, weighing 40 1/2 lbs to the bushel.

In macaroni work Miss A. M. Stewart, Dalhousie, took 3rd prize.

It is proposed that a Dominion Exhibition shall be held at St. John in 1883, that year being the centennial of the Landing of the Loyalists.

A very curious proof of the identity of animal and vegetable protoplasm has been supplied by Claude Bernard, who has shown that both are alike sensitive to the influence of anaesthetics.

The distance required for stopping railroad trains increases very rapidly with the increase of speed. In experiments made in England, the Westinghouse brake stopped a train moving at the rate of 4 1/2 miles an hour at a point only 48 1/2 feet distant from the place where the brake was applied; but when the speed was increased to 6 1/2 miles an hour the distance ran after the application of the brake was 118 1/2 feet, and at a speed of 6 7/8 miles an hour, the train ran 206 1/2 feet after the brake was applied.

In the performance in Paris of Le Pied de Mouton, a candlestick bearing two lighted candles is brought upon the stage. One of the characters in the play blows out the candles, but as he moves away one of them becomes re-lighted. The actor again blows out this light, when the other one becomes kindled, and, becoming enraged, the man takes up the candlestick and blows furiously without being able to extinguish the lights permanently. This effect, which creates considerable astonishment, is produced by means of an electric spark from an induction coil, which inflames the vapor from a mixture of ether and spirits of turpentine contained in the vessels representing the wax tapers.

Another Terrible Coal Mine Disaster. (From the St. John Globe.) STERLINGTON, Oct. 12.—Early this forenoon the water burst through the Ford pit of the Albion Mines at this place from an old working of the mine, killing ten men, amongst whom were James Fraser, the underground manager, for the company, and Conway, a boss. The names of the others have not been ascertained as yet.

while its weight must have been not less than 1,000,000 tons. It was grounded in water nearly half a mile in depth. What, then, must have been the thickness and size of the glacier from which this mass had become detached?

A remarkable solar protuberance was lately observed by M. Thollon at the Paris Observatory. The protuberance rose vertically as a thin luminous jet, moving at the rate of about twenty miles per second, to a height equal to one-fourth of the sun's diameter, or about 215,000 miles. After rising, it gradually decreased in brightness, at the same time enlarging its prodigious dimensions.

A Martime Exhibition at St. John has been proposed for next year, but it would seem best for us all to reserve our energies to secure that for the whole Dominion in 1883 and to make it as complete a success as that just closed.

Our River Fisheries. "The Riparian Rights Case" has been decided by Justice Gwynne in the Exchequer Court, at Ottawa, against the Government. He affirms that the Department of Marine and Fisheries has not the right to lease the fluvial rivers of this Province to any person to fish exclusively in, although it may regulate fisheries in such rivers. His Lordship decides that the owners of the soil have the right of fishing in inland rivers above the ebb and flow of the tide, but the public have the right of fishing in the sea and on the bays and arms of the sea.

STERLINGTON, Oct. 12.—One body, that of a miner named Bourne, has just been brought to the surface. It is terribly mangled. It is thought that the number in that part of the mine at the time was ten men, though in the confusion it is hard to get anything definite.

At the first burst of the water nearly all the men rushed to the mouth to escape, but these unfortunate victims, it is thought, stayed behind to do all they could to save property, being well acquainted with the pit, and thinking to escape in some sheltered nook.

A large number of men are down working to secure the bodies of the victims. James Fraser, the underground manager, was found under a cage and was badly smashed.

Conway's body was covered with timber and dirt, and the others were found in similar positions.

Another account. STERLINGTON, Oct. 12.—About 7 o'clock this morning, a small break was noticed in one of the bords in the south side of the Ford pit, from which a small stream of water was issuing. The matter was at once reported to the Manager, Mr. Hudson, Conway and the men in the bord.

Under favorable conditions, the chestnut and the oak will live a thousand years. The beach and the ash live less than half as long.

The attraction of the earth upon a magnetic needle at its surface, has been found to be about the same as that of a strongly magnetized hard steel bar forty inches long at a distance of one foot.

A method of removing the bark from trees, when the sap is not flowing, by treating the wood with superheated steam, has secured for its inventor a prize offered by the French Agricultural Society.

It has been proposed to utilize the swift current of rivers by systems of anchored floats carrying current wheels connected with dynamo-electric apparatus. The electricity thus generated might be used for almost every purpose for which power is required, as well as for lighting towns.

During a late thunder-storm near London, Eng., a great ball of fire was seen to descend from the clouds into a lake. After the storm was over a hundred dead fish, including two carp weighing together twenty-three pounds, were found floating on the surface near the spot where the fire-ball was seen to strike.

The northern magnetic pole of the earth is at present near the Arctic circle on the meridian of Omaha. Hence the needle does not every where point to the astronomical north, and is constantly variable within certain limits. At San Francisco it points about 17 degrees to the east of north, and at Calais, Me., as much to the west.

From the Carboniferous mines 4,200,000 tons of water are annually pumped. The average temperature is 135 degrees Fahrenheit, and to heat this mass of water by artificial means a consumption of 50,000 tons of coal yearly would be necessary. The water in some of the deepest shafts has a temperature of 107 degrees Fahrenheit.

GENERAL BUSINESS.

DRY GOODS, FOR FALL & WINTER. A. J. LOGGIE, & Co.

We have just received from Great Britain, and elsewhere, a very large and well assorted stock embracing many of the Novelties and fine Goods that are only to be found in the most fashionable city.
