to the advantages to accrue from scientific research, is amply shown by the interest manifested in the Boston meeting of the American Association for the advancement of Science, held during the week commencing August 25th. This was probably the largest gathering of savants ever witnessed in this country. The "photophone" is a novel instrument by which rays of light are made

to produce sound. The honor of the discovery of the applications involved is claimed by Prof. A. Graham Bell, the inventor of the telephone. He has succeeded in so controlling light-vibrations as to be able to transmit speech by rays of light, without the aid of conducting wires. In this way inarticulate sounds have been reproduced

At a recent Berlin bird-show several canaries were exhibited which attracted much attention on account of the peculiar colors of their plumage. Some were green, others red and light brown, and others of a soft grey tint, while all differ ed more or less from the light yellow of the common bird. These variations of color were produced by the daily use of cavenne pepper in the food of the birds. The pepper is given in small quantities at first, and the birds appear to like it. The process of preparation takes only half an hour, when the matter is once in type, and the plates thus produced are remarkably adapted for working on cylinder machines running at a high speed, being very light, flexible and durable. In this last respect they are said to even surpass metal plates, affording fifty thousand impressions, whereas the best electrotyped plate will last

traditional cases may be cited in which sudden fear or overwhelming news has turned the hair white in a few hours. The case of Marie Antoinette is one of the most tender and touching, for in a single night her rich dark hair was changed to a silvery-gray. A sepoy of the Bengal army was taken prisoner in 1858, and the fright he received caused his hair to become completely whitened within half an hour, the change being so rapid as to cause his captor to exclaim in astonishment, "He is turning gray!" Under the influence of fear or any great mental shock, the blood recedes from the surface of the body to the heart, and it is supposed the same influence may cause the coloring fluid of the hair to retire to the root-bulbs, where it remains thereafter. Gray hair has been known to become dark without the chemist's aid. In 1774, Nazarelia, a man 105 years old, was presented by nature with a new set of teeth and a restoration of the black hair of his youth. John Weeks was blessed with a regeneration of the color of his hair a short time before his death,
