G. STOTHART

Miramichi Advance,

Advance" Scientific Miscellary Recent borings indicate the existence

of workable coal-seams underneath London. Observations by M. Laulanie, of Toulouse, show that something very

like tuberculosis is produced in the lungs of dogs by a nematoid worm. It has lately been proven experimentally that calomel may be decomposed in the human system with the formation of corrosive sublimate-a powerful

poison. In view of the ravages of the phylloxera, which have so seriously intersubstitute for the vine, and is said to xcellent line of English Scotch and Canadian have obtained very good results with a of southern growth, and the plant has the advantage of being adapted to all

> soils and climates. Prof. Blyth, lecturing at Glasgow, coal-gas, and he believes that the least, if not anything of the contents,

disease-have become so frequent that this classification of their varieties by Mr. W. Hamlet may be of interest Microbes which appear as points are called monads, monera or micrococca. They are motionless, and may be regardas the spores of other microbes. 2. Motionless linear microbes-the bacteridians and the bacilli. To them belongs Bacillus anthracis, which produces the dreaded splenic fever of cattle and sheep. 3. Cylindrical mobile mi crobes, having rounded ends or contracted in the middle so as to form an 8, are the bacteria proper. Among them is Bacterium termo of putrefaction, the commonest of all. 4. Flexuous mobile microbes. They look and act like eels. and differ but little from the equally active bacteria. They are the vibrios. 5. Spiral microbes, resembling a cork screw, and mobile, Spirilla spirochetoe. Their presence in human blood appears to be connected with intermittent fever. 6. Microbes with heads, very active, having globules larger and more refractive than the rest of the body at on or both ends. These globules are ap parently spores ready to be detached from a bacterium-Bacterium capitatum. Besides these six principal states, the microbes form agglomerations in which their appearance is somewhat changed, these masses receiving distinctive names. There seems to be no way at present of distinguishing between a disease

one, by sight.

Astronomers' knowledge of the re markable ring of small planets travelling between the orbits of Mars and Jupiter commenced with the first day of the present century, when Piazzi discovered the first of these objects, which he named Ceres. Other discoveries followed at irregular intervals until, in 1845, the number of these small planets-or asteroids, as they are usually called-was increased to five. Since that year the list has extended very rapidly, and 220 have now been discovered. No estimate can be formed of the total number of the asteroids. They are very small, and Severrier has computed that their combined mass is probably less than one-fourth of the is heard in the Russian churches. earth's mass. From the size of Vesta, which is estimated to be 319 miles in diameter, they dwindle to an unknown minuteness. Herr Hornstein has communicated to the Vienna Academy the result of recent researches, which appear to prove that the number of asteroids with a diameter of over 25 miles is extremely small, and that probably all such were discovered before 1859. The number with a diameter less than five miles seems also to be very small, at least in the inner parts of the asteroid zone next Mars; in the outer regions next Jupiter there may be a more considerable number of these very small bodies. Most asteroids seem to have diameters between five and fifteen miles. The average number with a diameter of five to ten miles discovered during the last twenty years is about three each year; the yearly number of ten to fifteen miles diameter is about one and three-fifths. Herr Hornstein believes, therefore, that unless much more powerful telescopes are used future discoveries of asteroids will be chiefly confined to those measuring five to fifteen miles in diameter.

Why the Men Won't Dance.

The coming man will, as well as many the March of Life. of the present men do, find more This clock also has an astronomical pleasure in conversation with an intelli- and mathematical calculation, which, if gent lady than in whirling about with kept up, would show the correct moveher in a dance or german. The german | ment of the planets for 200 years. is what caused some of the change, The inventor has a crank attached to he subscribers without delay or proceedings will to go around. Wher many society men canopy.

ly decline. At a recent swell dancing party (it was given last week), there were eight ladies present to each man. They gave the men so much dancing that they were punished considerably as they deserved to be. Since then some of them have announced that they had enough of dancing, and wanted to be excused from any more of it this season. The dancing men found that in many cases they were required to dance with a lot of women whose ages had reached that point where they could be called with a degree of certainty grandmothers. The young society lady - - MARCH 2, 1882. does not dance as much as did her predecessors. The colleges where forty young ladies have been taught in the last few years have a way of instilling into their graduates that dancing after all is not, or should not be, the chief ambition of women; and that a man, it matters not how good a dancer or piano-player he is, if he has no other qualifications, should be shunned .-This kind of education has had a terrible effect upon dancing parties. The result is that the modern young lady, as well as the modern young man, don't take much dancing in their amusements. When they want to see dancing they prefer to have some one to dance for them, as base-ball clubs now hire men fered with vine-growing, a French to play for them, instead of playing agriculturist has sought to discover a for themselves, as they did when the game was introduced, or go to a theatre where professional dancers can Tweeds suitable for spring and summer wear.

Also a beautiful and choice lot of English Coating, variety of red beet. This beet yields a be seen. It is no wonder then wine which is said to be equal to many that dancing men are scarce. It is not the young society ladies who are crying over the disappearance of the dancing man; but those who in early life learned nothing except how to has called attention to the adaptability enjoy what is mistakingly called society of the oxylydrogen light for general pleasures. The society lady of the past, use. The illumination is very brilliant and many still living, know little else and beautiful, the gases may be stored than society matters. The modern and delivered in the same manner as society lady can tell the name of, at

system may be made economical by and often she knows it all, of the last using wind or water power to produce historical, scientific, or political work, which has been issued. She can talk on what is going on around her, and References to the microbes—or mihas a pretty good idea of public affairs. croscopic organisms of fermentation and The decaying society women knew nothing but society. People who don't

Curious Time-Keepers.

An American traveler once saw a rare Japanese time-keeper, which has been described in an old record. This clock, in a frame three feet high and five long. represented a noon landscape of great loveliness. In the foreground were plum and cherry trees, and rich plants in full bloom; in the rear a hill, gradual in ascent, from which flowed a cascade admirably imitated in crystal. From this point, a thread-like stream glided along, encircling in its windings rocks and tiny islands, but presently losing itself in a far off stretch of woodland. In the sky turned a golden sun, indicating as it passed the striking hours, which were all marked upon the frame below, where a slowly-creeping tortoise served as a hand. A bird of exquisite plumage, resting by its wings, proclaimed the expiration of each hour. When the song ceased, a mouse sprang from a grotto near by, and running

producing bacterium and a harmless and is provided with a dainty pistol, which perhaps served as an alarm. In London is an eagle-shaped watch, within which, when the body of the
