Scientific Miscellany.

Dr. Wm. A. Hammond finds overheated apartments to be a potent cause of nervous irritability. If we would preserve our amiability and our tranquility of mind we should live in wellventilated rooms kept at a temperature of about sixty-five degrees.

Of the sense of taste, Prof. McKenprobably some \$8,000, which are much drick states that the base of the tongue more legitimate than a number of the is most sensitive to bitters, and the tip to sweets. A substance must be soluble in the fluid of the mouth to create taste, but no definite relation has been found between the chemical condition of bodies and their taste.

Modern improvements have increased the power of the microscope so greatly that it is now made to magnify about 100,000 diameters. The best unaided human vision can see no objects much smaller than the three-hundredth of an inch in diameter; but the most skilful microscopists, with their best instruments, are able to examine monads a hundred-thousandth of an inch in di ameter. Beyond this minuteness is obscurity. It has been estimated that the ultimate particles or atoms composing all matter can be no more than one-twenty-millionth of an inch in diameter, so that it seems hardly probable that they will eyer be revealed to human eyes.

Dr. T. Sterry Hunt has calculated that the amount of carbonic acid stored in the limestones of the earth would form not less than two hundred atmospheres equal in weight to our own. This, together with the carbon of the coal-beds, must have been drawn from the air, which he believes gradually receives its supply of the gas from interstellar space.

If the astronomical view that the moon was once a part of the earth's mass be true, the moon in its early age must have revolved much nearer to the earth than now and must have caused prodigious tides upon its parent planet -as recently shown by Prof. Ball. Prof. J. S. Newberry finds in geological evidence a refutation of this theory-to the extent, at least, of proving conclusively that no such tides could have existed since the commencement of the geological record. He does not hesitate to assert, therefore, that the astronomers are in error in regard to the moon's genesis; or that if it was once a portion of the earth, the separation took place at a period so remote that it had receded to nearly its present distance before the dawn of life on the

Explorations by a Russian party show that the eastern shore of the Gulf of Obi, in northern Siberia, is nearly fourteen miles west of the place assigned to it by existing maps.

A successful operation, during which the patient was kept immersed in water for sixteen days, was recently performed by Dr. Langenbeck, of Berlin. Among other applications, these "permanent baths" are said to be especially valuable in cases of burns.

The auroras observed by Baron Nordenskjold at the winter quarters of the Vega, in latitude 67 degrees 5 minutes north, were mostly feeble and lacked the ray-like formation so often characteristic of these phenomena. A simple luminous arc, low in the sky, was most common; and this distinguished navigator's theory is that the arc forms a portion of a permanent luminous crown above the earth's pole.

In researches upon the petroleums of the Caucasus, M. Schutzenberger has observed that, although conducted with the utmost care, his analyses frequently. showed more than one hundred per cent of matter. A like result was obtained with two other substances .-Following up the investigation, he has found that sodium and copper appear to so affect certain products as to produce the anomaly observed; while if the articles so affected are exposed for a short time to sunlight they give a normal analysis. It is suggested, as a possible explanation, that the weight of parlor. atoms may vary within certain narrow limits, and that in the case of the hydrocarbons it may be modified by the action of sodium or by light. If confirmed, M. Schutzenberger's discovery will have an important bearing upon the fundamental principles of chemical science.

German measurements give the following as among the greatest daily quantities of rainfall recorded Europe: At Colberg, Sept. 7, 1880, four inches of rain fell in seven hours. At Breslau, August 6, 1858, four and a half inches fell. At Klausthal, in the Harz, the daily maximum observed is four and a half inches; and at Hochenschwand, in the Black Forest, it is five inches.

A new white metal and malleable bronze is produced by the decoloration of copper by means of ferro-manganese. The composition gives a metal as white as silver and as malleable as the German silver obtained with nickel. For a laminable white metal in plates zinc or brass is added to the composition.

Shameful Doings. Some astounding stories are told in Washington as to the expenses incurred by John G. Thompson, Sergeant-at-Arms hair will grow again to cover the cemeof the last House of Representatives, in connection with the funeral ceremonies of President Garfield. A report has been published that there was a total expenditure of \$7,000 on behalf of the members of the House in connection with the funeral; that there was one item of \$1 .-700 paid for champagne, brandy, whiskey, cigars, and lunch, \$300 of which were charged to cocktails, and that there were general indications that at some time during the absence of the Garfield party from Washington there was a shameless orgie. A sub-committee of the House Committee on the Expenses of the Garfield Funeral has been engaged in auditing the bills, and has decided for the present to keep the facts secret.

The vouchers in many instances are signed by the Congressmen themselves .-The carriages are charged generally at \$10 per trip. There is a large item for the expense of telegraphing from Washington | then, smiling, said: "Plumb, put me to every Representative and Senator .-Carriages were provided both for the funeral in Washington and for the funeral in Cleveland. There is a considerable sum for crape for decorating the Capitol building. The cost of transporting the corns, corns of all kinds and of all sizes, Marine Band to Cleveland and return is are alike removed in a few days by the also in the account. There was an allow- use of Putnam's Painless Corn Extracter. ance made for the cost of a special train Never fails to cure, never causes pain, from Washington to Cleveland (in accordance with the arrangements first made by noying than the original discomfort. Give Sheriff's Office, Newcsstle, 16th January, A.D., 1882.

Sergeant-at-Arms Thompson with the Putnam's Painless Corn Extractor a trial. local agent here), but the Pennsylvania Beware of substitutes. Sold by druggists Railway authorities, when the bill reached them for settlement, declined to take any

money. In addition to this \$8,000 already

items included in the \$8,000 already paid

So far as can be learned, the items which

the American people would most heartily

approve, and will insist must be paid, re-

main still unadjusted, while the bills

which ought never to have teen incurred

and the contracting of which was a dis

grace to the nation, have already been

liquidated, and have been paid without

the knowledge, probably, of many except

the sub-committee and the parties in

interest; and among the parties in

interest are to be included the Congress-

men who did not hesitate, as members of

Gen. Garfield's funeral cortege, to make

liberal use of liquors provided at Govern-

ment expense. Sergeant-at-Arms Thomp-

many Senators and Representatives. He

did not consult them as to the providing

of liquors, and he seems to have been paid

for that service without question. - Chicago

How Mr. Parsons Wooed.

"I never knew precisely why she

broke her engagement with me," said

Mr. Parsons solemnly. "I think she

used to love me. She said so anyhow,

and I think she meant it. I tried

my best to deal fairly with that girl.

Soon after she accepted me I said to

"Annie, you know it often happens

that marriages turn out unhappily

because people do not understand each

other beforehand. You think you

know me now, but you really know

very little about me. You do no

comprehend my nature and my pecu-

liarities as you will ten years hence."

"She admitted that it was so, but

she said she couldn't see what on earth

"I will tell you what we can do,"

said I. "There is a noble science

known as phrenology. It enables us to

read a man's inner nature. The bumps

on his head are the symbols of his soul.

A phrenologist fumbling about over a

man's skull can discern whether he is

cruel, or selfish, or passionate, or un-

feeling. He can tell whether a certain

spirit is the kind of a one to form an

affinity for a certain other spirit, and

whether the two are likely or unlikely

"She said she hadn't very much

faith in it; but I assured her she was

wrong. I told her I would have my

head examined by a competent phreno-

logist, and would get him to describe

my characteristics in writing in full

so that she could study me at her

splendid, and I thought so too.

"She said she thought that would be

"So I paid a professor to feel my

head all over and to put the results of

his exploration on a piece of paper.

It was not quite so favorable as I ex-

pected it. I admit that I paid him

five dollars extra to strike out his as-

sertion that my combativeness was

eleven and my philanthropy minus two.

I may have done wrong, but my

"Anyhow, the evening I was to take

it around to her the thought struck me

that she might want to satisfy herself

of the correctness of the report, and so

I went to the barber's, had my head

shaved close, and then I got the pro-

fessor of phrenology to map out the

whole scheme of bumps on my scalp

with a paint-brush and ink, dividing

the skull off into sections, so that it

looked like the ground-plan of a ceme-

tery. When the ink was dry I put on

my hat and went to her house. I saw

the servant-girl looking curiously at my

head as I put my hat on the rack, but

she said nothing, and I went into the

"Pretty soon Annie's father came

down and said I would have to excuse

her that evening. I was right sorry.

But I handed him the manuscript, and

bending my head down I asked him if

statement. I saw that he looked vexed

about something, but he seemed rather

interested, and so after he had read the

manuscript and carefully glanced over

my scalp, I asked him if he considered

"'Perfectly so,' he said; and then I

said that the professor told me I had

some bumps that were not even found

"He said something about that

being 'surprising,' and then he added,

But the matter does not concern me,

"'Why not?' I asked. 'Your son-

"Then he got up and said that I was

in-law's affairs concern you, don't they?'

not going to marry into the family ;

that my engagement with his daughter

was broken off. As soon as he said

that he walked out of the room, and of

course I went away, but to this day I

never learned what was the matter, and

I don't know yet. Hard, wasn't it?

Another for Sir John.

tion in a cloud of smoke. From one sub-

ject to another they easily glided to reli-

count the number here who are orthodox,
