THE THEORY OF VACCINATION. - Prof. Typdall suggests that, just as the soil dose. may be so effectually robbed of some essential ingredient by one abundant crop as to be incapable of producing another, fatal or considerable quantity may be impossible. It would thus appear that protective vaccination or inoculation is simply the introduction into the blood of weakened and comparatively harmless which might become food for similar

germs in a more vigorous and dangerous WIND WORK .- A gale at East Louis in 1871, according to Mr. C. Shaler Smith, overturned a locomotive, exerting a force of no less than 93 pounds per square foot. At St. Charles a jail was destroyed in 1877, the pressure required being 84 pounds per square foot. At Marshfield, in 1880, a brick mansion was leveled, the force necessary being 58 pounds per square foot. Below these off rails, and bridges, etc., blown down, by gales of 24 to 31 pounds per square

LIGHT.—Successful experiments in dis tributing the electric light to great distances have been made in connection with the Turin Electrical Exhibition. A Siemens machine of 30 horse-power generated a current which was simultaneously used by several electric light systems spread over a circuit of about 25 miles.

A Motor driven by small charges of gun-cotton is an English novelty. It is said to be applicable wherever small powers are required. GREAT WORMS .- According to Mr. F

E. Beddard, a London zoologist, earthworms two feet in length have been found in the British Isles, and various species as large or larger are known to exist in South America, Western Africa, Australia and New Zealand. The largest species known, however, inhabits South Africa. Forty years ago a specimen was described which measured six feet two inches in length, but it seems to have been nearly forgotten until the other day, when a gigantic creature of the same species was sent to the London Zoological Gardens from Cape Colony. The longest measurement of this worm yet taken reaches six feet five inches, its diameter being nearly

half an inch. Money Vegetation. -A short time since Paul Reinsch discovered several kinds of minute plants-including two algae which had before been unknowngrowing upon coins after having been long enough in circulation to receive thin incrustations of organic matter. A Hungarian botanist, Jules Schaarschmidt, has more recently found the microscopic growths upon paper money, even the cleanest specimens not being free from them. He has detected seven species, including-although they are rare-the two new algae described by Reinsch.

PICTURES OF SOUND.—Some remarkable photographs of a pistol bullet in its flight | you: -under the illumination of an electric spark-have been secured by Prof. E. Mach, of Prague. He has also photographed the air streams which one may see over a Bunsen burner placed in sunshine; and has even obtained pictures of waves of sound, these last being made visible by a method in which advantage is taken of the irregular refraction of light by air set in vibration by sound. GENERAL NOTES AND NEWS

The Fred Jacobs alias Wm. Johnson,

whose escape from Kingston Penitentiary was announced in Monday's despatches, is a native of Toronto. The confinement from which he has escaped was not his first experience of penitentiary life. Some time ago he was convicted and sent to the Penitentiary for a lengthy term. Shortly after entering that institution he commenced to fail in health, and from a strong, robust man, he fell away rapidly to a mere skeleton, apparently having already placed one foot in the grave. Medical men reported him dying of consumption, and the opinion was freely expressed that it was but a question of a few weeks before he would pass over to the silent extraordinary pressures, Mr. Smith has majority. A parpon was secured for the instanced numerous cases of trains blown | dying convict, and he returned to his nome in Toronto. No sooner had he re gained his liberty than he commenced to mend, and within three months was as strong and robust as he had ever been. The secret afterwards leaked out that he had during his confinement daily eaten a portion of the soap furnished for ablutionary purposes. About this time a number of daring burglaries were committed in the towns along the G. T. R. east of Toronto, the crimnals escaping with their plunder until a store at Belleville was broken into. The burglar, who proved to be none other than Jacobs, was caught in the store and again relegated to peni-

Who now Unknown will take

The little tussel of thousands of all sorts and conditions of people with Fortune, will take place at New Orleans, La., on Tuesday, Dec. 16th, 1884, when Gens. G. T. Beauregard of Louisiana and Jubal A. Early of Virginia will gently but firmly scatter \$522,500 among the fortunate ticket-holders of The Louisiana State Lottery at the Grand Semi-Annual (175th Monthly) Drawing, of which "M. A. Dauphin, New Orleans, La.," is prepared to give any information desired.

In conversation with a reporter a delegate to Roman Catholic Plenery the Council said :- "The religious world will be surprised at the liberal and broad treatment the council has given to many subjects. Catholics want to lead the way to greater prosperity, and in all matters that tend to make living less laborious and religion less irksome to liberal-minded Americans. We are alive to the knowledge that the narrow ideas of a century ago will not pass current in this enlightened age, and you may contradict the rumor that the council will pass measures enforcing the canon prohibiting mixed marriages, and also the idea of our recommending that Catholics ask for a division of the public school tax. These subjects will not be touched."

The exposure of the utter worthlessness of the large packs of horse and cattle pow ders has saved our people a vast sum. There is only one kind now known that are strictly pure and these are Sheridan's.
