REPORTS OF GOVERNMENT CHEMISTS As to Purity and Wholesomeness of the Royal Baking Powder.

"I have tested a package of Royal Baking Powder, which I purchased in the open market, and find it composed of pure and wholesome ingredients. It is a cream of tartar powder of a high degree of merit, and does not contain either alum or phosphates, or other injurious substances.

E. G. Love, Ph.D." phosphates, or other injurious substances. "It is a scientific fact that the Royal Baking Powder is absolutely pure. "H. A. MOTT, Ph.D.".

HENRY MORTON, Ph.D., President of Stevens Institute of Technology." "I have analyzed a package of Royal Baking Powder. The materials of which it is composed are pure and wholesome. S. Dana Hayes, State Assayer, Mass." The Royal Baking Powder received the highest award over all competitors at the Vienna World's Exposition, 1873; at the Centennial, Philadelphia, 1876; at the American Institute, New York, and at State Fairs throughout the country. No other article of human food has ever received such high, emphatic, and universal endorsement from eminent chemists, physicians, scientists, and Boards of Health all over the world.

"I have examined a package of Royal Baking Powder, purchased by myself in

the market. I find it entirely free from alum, terra alba, or any other injurious sub-

Note-The above Diagram illustrates the comparative worth of various Baking Powders, as shown by Chemical Analysis and experiments made by Prof. Schedler. A pound can of each powder was taken, the total leavening power or volume in each can calculated, the result being as indicated. This practical test for worth by Prof. Schedler only proves what every observant consumer of the Royal Baking Powder knows by practical experience, that, while it costs a few cents per pound more than ordinary kinds, it is far more economical, and, besides, affords the advantage of better work. A single trial of the Royal Baking Powder will convince any fair minded person of these facts.

* While the diagram shows some of the alum powders to be of a higher degree of strength than other powders ranked below them, it is not to be taken as indicating that they have any value. All alum powders, no matter how high their strength, are to be avoided as dangerous.

CHATHAM, N. FB. - SEPTEMBER 6. 1888

Horse-Shoeing.

A board of army officers sometime since

convened at Jefferson Barracks, St. Louis, U. S., for the purpose of determining upon the best method of shoeing cavalry and artillery horses. The result of the conference was an order from army headquarters rescinding all previous regulations governing Government farries, and substituting new rules, as follows: "In preparing the horse's foot for the shoe do not touch with the knife the frog, sole or bars. In removing surplus growth of that part of the foot, which is the seat of shoe, use the cutting pinchers and rasp, and not the knife. The shoeing knife may be used, if necessary, in fitting the toe clip. Opening the heels or making a cut into the angle of the wall at the heel must not be allowed. The rasp may be used upon this part of the foot when necessary, and the same applies to the pegs. No cutting with a knife is permitted, the rasp alone when necessary. Flat-footed horses should be treated as the necessity of each case mayrequire. In for ging the shoe to fit the foot, be careful that the shoe is fitted to and follows the circumference of SACKVILLE, N. B. the foot clear round to the heels; the heels of the shoe should not be extended back straight and outside of the walls of the heels of the horse's foot as is frequently done. Care must be taken that the shoe is not fitted too small, the outside surface of the walls being then rasped down to make the foot short to suit the shoe as often happens. Heat may be used in preparing and shaping the shoe, but the hot shoe must not be applied to the horse's foot under any circumstances. Make the upper or the foot surface of the shoe perfeetly flat so as to give a leval bearing. A shoe with a concave ground surface
