GENERAL NOTES AND NEWS Fifty postmasters in Conrecticut, were arrested recently for selling postage stamps on credit.

A Strong Following.

MANY diseases result from neglected constipation, such as sick headache, bad blood, foul humors, heartburn, dizziness and general ill health. From one to three bottles of Burdock Blood Bitters is guaranteed to cure constipation and all diseases caused by irregularity of the bowels.

Cardinal Manning gets the chief credit for the quick termination of the dock troubles in London.

Severely Attacked.

WAS severely attacked with diarrhea and vomiting, the pain was intense and I thought I could not live till morning. Six doses of Dr. Fowler's Wild Strawberry cured me and I have not had the least symptons of it since. MRS. ALICE Hopkins,

Wilkie Collins, after Dickens, England's most popular novelist, died in London on the 23rd ult., aged 65.

Hamilton. Ont.

In Many Forms.

DYSPEPSIA assumes many phases, all disagreeable to the sufferer, yet it takes no form which from two to four bottles of Burdock Blood Bitters will not cure. B. B. cures dyspepsia, tones the weak stomach, aids digestion, sharpens the appetite and renovates the entire

Major Field, formerly secretary of the British American Mortgage Company, London, Eng., has been sentenced to 12 months imprisonment with hard labor for

Cannot Fail.

MRS. John E. Thompson, of Shelburne, P. O., writes: My two children received greet benefit from Fowler's Extract of Wild Strawberry for Diarrhœa and summer complaint. I gave it according to direction and they soon recovered. Be sure and get the genuine.

From Bad To Worse

QCROFULA leads to consumption. I From three to six bottles of Burdock Blood Bitters will cure scrofula, salt rheum, erysipelas, boils, pimples, blotches, tetter, shingles, scald head, sore eyes, and all skin affections, by cleansing the system and removing all impure matter that causes bad blood.

It is reported from London that dissatisfaction reigns in the Royal family on account of Her Majesty allowing Prince Henry of Battenburg, Princess Beatrice's husband, to influence her too much in state affairs, and the Prince's arrogance in consequence.

Tried! Tested! Proved!

took according to directions, which completely cured me. ROBERT E. GREEN, Lyndhurst, Ont. This medicine cures all looseness of the bowels.

A Kansas City saloon-keeper has sued a customer for the amount of a bill which includes among its items 26,318 gallons of whiskey, 435 single drinks of ditto, besides a lot of beer in glasses, pitchers and kegs. The fact that Kansas City is the depot of supply for prohibition Kansas is the one thing that makes that bill

and Hypophosphites

Is sold all over the world. It is far superior to plain Cod Liver Oil, palatable and easily digested. Dr. Martin Miles Stanton, Bury Bucks, London, England, says: "I have prescribed Scott's Emulanyone especially where cod liver oil itself cannot be borne. Sold by all Druggists, at 50c. and \$1.00.

D G. SMITH, EDITOR & PROPRIETOR. TERMS-\$1,50 a Year, in Advance

Iwo in One Year for the First Time Since 1712 and the Last Time Before 2057-They Give Occasion to Learn the Nature of the Sun.

IN THE YEAR 1889.

TOTAL SOLAR ECLIPSES.

This year began with a total eclipse, and just before its close, on Dec. 21, there will be another similar phenomenon. Two total eclipses in one calendar year very seldom occur, as may be concluded from the fact of the last one being about twenty years before the birth of Washington, and that the one following that to which this article refers will not take place until the year 2057. Very frequently two successive total eclipses will occur within a period of twelve months, although not in the same year, so that it is hardly a matter of astronomical significance. The importance of a solar eclipse lies in the fact of its affording the only chance ever afforded to see the solar corona; and as there are only sixty or seventy of them in a century, but a limited opportunity is afforded for discovering the mysteries of the sun's surroundings. Observations on the intensity and character of the light of the corona are also valuable for the advancement of astronomical science, so that it is necessary that every possible eclipse should be observed. The results of observations

sun, and these new hypotheses must in their

during the last eclipse have caused a decided

modification of former views as to the con-

stitution of the envelopes which encircle the

PATH OF THE ECLIPSE OF DEC. 21. turn be subjected to the test of additional observation. It will be four years before another total eclipse occurs, which makes one more reason for taking advantage of what is about to happen. Although astronomy is one of the very old-

est of the sciences, and has made immense strides in advance, it is only within a few years that, by the aid of the spectroscope and photography, the nature of the sun and its surroundings has been established with anything like certainty, and even at this date the theories as to the sun's activity are widely at variance. The halo of light seen around the black disk of the moon at total solar eclipse was, until about twenty years ago. thought to be due either to the effect produced by our own atmosphere or by the moon's atmosphere. Now astronomers are convinced that this corona is part of the sun itself, and that to it scientists must look for the disclosing of the mysteries connected with the sun's light and heat.

Recent observations of eclipses have made it quite certain that the sun as ordinarily visible to us, bounded by the photosphere, is only a part of the sun. Just outside the photosphere is a comparatively thin layer of gas, mainly hydrogen, called the chromosphere; around this is the corona, thousands of miles thick, and around the corona there is a considerable extension of matter, about which very little has been definitely determined. The general theory that has been built up from a knowledge of these facts, and from the observations of such phenomena as sun spots and prominences, is that the chemical A YEAR ago last summer I was troubled elements are being continuously tossed about in the enormous atmosphere of the sun, and never getting out of it. The outer layers of this atmosphere are recognized as much cooler than the inner. Cool masses of matter are produced by condensation, and, having gathered weight, come under the influence of a gravitation over twenty-five times as pow-erful as our own, and fall with almost incredible rapidity toward the center, and it is supposed that these terrific rains of cooled matter produce what are called sun spots. Astronomical computers have for ages been able to determine the motions of the sun

moon, earth and stars with sufficient accu-

racy to not only say when the various phenomena will take place, but to give the exact location best suited for observation. In this eclipse the path of totality begins about half way between the island of Hayti and Scott's Emulsion of Cod Liver Oil the northern coast of South America, extends in a southeasterly direction, touching the South American coast here and there, until it reaches a point in the South Atlantic ocean almost midway between the islands of Ascension and St. Helena, when it bends to the northeast, passing over the island of San Paul de Loando, and so continues across Africa, ending in 5 degs. north latitude and about 49 degs. east longitude. The eclipse is sion and taken it myself. It is palatable, caused, as is well known, by the shadow of efficient, and can be tolerated by almost the moon sweeping over the earth, the sun being either wholly or partially obscured on that part of the earth where the shadow falls. The total eclipse is visible only to a very small portion of the earth's surface, because the distance of the moon changes so little from us that the earth can never be far from the vortex of the moon's shadow as cast by the sun. As the moon moves around the earth from west to east, its shadow moves in the same direction, and the diameter of the shadow at the surface of the earth ranges from zero to 150 miles. It therefore sweeps along a belt of the earth's surface of that breadth, in the same direction in which the earth is rotating, with a velocity of 1,200 to 2,100 miles per hour. It may be inferred from this that a partial eclipse is visible over a much greater portion of the earth's surface

than the total eclipse, to observe which the observer must station himself beforehand at some point of the earth's surface over which the shadow passes. The point selected in this case as being most favorable for the necessary observations is the town of Muxima, on the Quinza river. in Africa. The scientists will land at the island of San Paul de Loanda, which is between two and three hundred miles from the mouth of the Congo, and will from there go

about 100 miles into the interior. The last session of congress appropriated \$5,000 to defray the expense of an expedition of scientists to be sent under the auspices of the secretary of the navy to observe the total eclipse, and at a conference held in Washington it was decided to divide the expedition into two parties, one under the direction of Professor Todd, of Amherst, already famous for having conducted a similar expedition to | the Clatsaf Chief, and her husband went on Washington, who is an expert in solar pho- a larger stock of goods, and in another year tography, and will be intrusted with the their fortune was established. duty of obtaining photographs of the eclipse

in its various phases.

Mr. Russell has quite an established reputhe party and to bring them home. Eclipses of the sun have not the peculiar

attraction to the aborigines of various countries that the moon has always been said to possess, because total ones are less frequent and are not of so long duration. The followers of Pizarro found the belief among the Peruvians that a partial eclipse meant illness of the luminary, and that a totality signified death, when it was supposed to fall to the earth and so end the world. When one occurred they would try to appease the wrath | People.

witnessing the sufferings of the creatures it loved would revive itself to save them. When

the body emerged from the shadow, praise

would be given for the mercy shown in not TWO OBSCURATIONS OF THE SUN putting an end to human existence. The Esquimaux acted somewhat similarly. The women bored the ears of the dogs in the faith that, if the animals cried out, the end of the world was not yet at hand; for these animals are presumed to have existed before men, and to have a better presentiment of the future. The story of the dragon that caused eclipses by devouring the sun or moon is still current among the masses in Siam and China, and it was only at the beginning of the last century that the Christian world abandoned the custom of ringing bells during storms and eclipses to counteract the workings of the bad spirits, and to repel with a priest's blessing the darkness caused, as they thought, by phantoms, and it was not until the light was fully restored that men could hope that the world would last at least through another era.

THE RECENT STORM.

How the Water Was Heaped Up All Along the Atlantic Seaboard. Those who read the story and have seen he pictures of the great Conemaugh fleod have a good idea of the great power of water, and a renewed illustration of this power is furnished by the storm which recently created so much devastation all along the Atlantic coast. When the sun and the moon pulled together and attracted the earth's wa

ter unto themselves, the water, so to speak began to hump itself, and then the wind came along, causing a swell. Thus the waves reared themselves higher up on the shore than for many years before, and swept away board walks, bathing houses, cottages, and damaged hotels and railroads all along the New Jersey coast, and at Atlantic City in particular they wrought great havoc. At Coney Island they curled themselves up and swept over to the Brighton Beach track and flooded the course.

BATHING HOUSE AT MANHATTAN BEACH. At Manhattan Beach they played hob with the bathing house, as will be seen from the illustration, and twisted up the rails of the Marine railroad—said to be the shortest and most profitable road in the world. The waves came up at Brighton Beach nearly to the Brighton hotel, which perhaps you may remember was moved back so far last winter. They had a whole school of snorting steam engines down there, and putting them on rails

DEVASTATION AT ATLANTIC CITY. back of the hotel pulled it out of its moorings and took it back where it was thought the wild waves spoken of would never reach it, but, bless you, they forgot all about the possible conjunction of neap tides with a cyclone. And at sea also great damage was done. Many vessels were cast ashore, and many a brave sailor boy went to "Davy Jones' locker." Great is the power of water.

CAPT. MINNIE HILL.

She Is an Enterprising Commander of Pacific Coast Steamer. One of the Pacific coast steamers is commanded by a handsome young woman, who was born in Albany, Ore., in 1865, where she lived until a short time before her marriage with Charles Hill, in 1883. Mrs. Minnie Hill is a handsome brunette, about 51/4 feet in height and weighs about 140 pounds.

At the time of their marriage Mr. Hill was purser of the steamer Joseph Kellogg. He THE UNDERSIGNED offer for Sale at Lowest Purser of the steamer Joseph Kellogg. He remained in this position for three years, his wife helping him in his work. They lived economically and succeeded in saving \$1,000, with which they purchased an old schooner and converted her into a trading boat, put-

ting a small engine into her. Mrs. Hill had studied navigation, and while helping her husband had gained a thorough knowledge of the Columbia and Willametti rivers. She next took out a second class master's license and easily passed her examination. In December, 1886, Mr. Hill obtained an engineer's license for the steamer Minnie Hill to run from Portland to Astoria, a distance of 110 miles. A stock of goods was then bought on credit and they started a trading business at the various points on the Columbia river.

Mr. and Mrs. Hill were very successful in their venture. In the first year they paid off all their debts, and in the second year their

license. That same CAPT. MINNIE HILL. day she entered on her duties as commander of their new vessel, Japan two years ago, the other party to be under the direction of Mr. Joseph Russell, of out and take in more territory, they shipped Capt. Minnie Hill won the heart of every

one by her happy disposition, her kindly heart and charming manners; her hushand tation for devising instruments best adapted | was just as well liked for his upright and to suit peculiar conditions of observation | manly qualities. This couple and their tradand a reflecting telescope for taking frequent | ing were known all over the Columbia and pictures of the corona is in process of con- Willametti rivers. In another year they struction under his supervision. He will also | bought the steamer Gen.
