Accommodation for Campbellton,

Miramichi Advance.

OHATHAM, N. B., - - OCTOBER 29, 1896.

Uneasy. The St. John Globe published letter from Chatham the other day in which it was intimated that dissatisfaction and misgivings were chronic in Northumberland, not only amongst the Liberals and Conservatives, but generally. The causes of this alleged condition of the public mind was represented

to be the fact "that everything is not yet settled upon the universally accepted basis that recognition of its friends is a paramount duty of the presiding administration," and the writer goes on to indicate that the chief cause uneasiness is on account of the nonappointment of Mr. Watt to the Chatham post office and Mr. Kelly tak-

ing a man down river to do some work at the Neguac Lighthouse. In jus-BARGAINS tice to the people of the County as well as to the Liberals and Conservatives, we may say that there is no excitement and very little interest manifested over the matters referred to. About a dozen persons, who are after some offices which are, or are expected to be vacant, are making efforts to keep people in the outlying districts on the move with the object of having them help their canvasses at Ottawa for the HARRIS positions they have in view-Mr. Watt, as usual, leading in the meeting-holding propaganda, and taking with him his are also expecting to be remembered when appointments are made. The people generally, however, know little about these meetings or the representations that are being forwarded to here from the West Indies on Friday and Ottawa, and have neither time nor inclination to interest themselves in them. They know that the Govern-

perienced as to be impressed with the

efforts being made along the lines

stated, and it is probable that when the

time comes for an appointment to be

made to the post office, due care will

be taken to select a person whose character and experience will justify the choice made. As to boasting of "the patronage, being controlled by Senator Snowball, as the Globe writer alleges, that is a part of the method followed by Mr. Peter Mitchell's friends with the object of gaining by misrepresentation what CARPET they cannot accomplish by stating things as they exist. The public hereabouts rightly assume that any hesitation on the part of the ministers in making appointments, is caused by the bickerings and rivalries amongst the numerous club committees and factions who profess to be their friends, and it may be possible that while they are fighting one another, the offices that are vacant may be filled by the appoint

Conservative Organization

Organization of the Conservative party of the Province was effected at a convention held in St. John, on Tuesday, 20th inst. Sir Charles Tupper. Hon. Geo. E. Foster and other leaders were present and made speeches. Hon, Senator Wood, of Westmorland was elected President and J. D. Hazen,

Grant that the gold output of Canada, especially of British Columbia, astenish the world at no distant date. In Nova Scotia, where gold mining has been lucrative during the last ten years, the total production had reached \$11. 500,000 at the close of 1895. In the Province of Quebec, where gold has been known since 1847, an examination last year brought out enough of the metal to cause a fever of excitement and an eager taking up of all obtainable land.

The elaborate attempt made by a commission of the British Royal Society to bore into a coral reef for a thousand feet or so, to secure a section for studying its structure, has given very unexpected results. The apparatus was tried in two places on Funafuti, but, at a depth of 65 feet in one case and 72 in the other, the tube became so choked with a material like quicksand containing small masses of Alice Loggie, coral that further progress was impossible. So far as the reef was pierced, it appeared to be not solid coral, but more J. J. Clarke, like a vast coarse sponge of coral with wide interstices, either empty or filled

Marvellous as it was at birth a few months ago, Roentgen photography already an infant of remarkable development. Since the first crude pictures of the bones of the hand, improvement has been made step by step until it is now possible to photograph the entire skeleton | Laura Murphy, of the living body, and to show it in a single picture of a trifle more than life size. At a recent scientific convention in Zurich, a picture of this kind created considerable astonishment. It was due to the efforts of Prof. Ludwig Zehnder, the inventor of a new Crookes tube which is capable of working at a greater distance than earlier ones, thus increasing the size of the plates that can be used and improving the pictures in sharpness. For the picture the tube was arranged exactly over the middle of the body about 23 inches from the dry plate on which the subject lay. The different parts were taken separately, the head requiring an exposure of 60 minutes, the breast, 60 minutes, the knee joints, 50 minutes, the pelvis, 60 minutes, the feet, arms and hands, 15 minutes each. By uniting the several proofs, a complete picture, 6 feet 6 inches long, was obtained.

parts are penetrated by the Roentgen rays, giving absolutely clear pictures of other organs are distinguished, and with performance of their For a long time, says M. Henri Par-

ville, we believed that life of any description ceases between 50° and 60° C. (122-140° F.), but in the solfataras, or hot sulphur springs, of the Pyrenees, some Messrs. DeForest & Sons are landing 200 | filamentous algae have been found thrivhalf chests of Oolong tea, direct from ing at 61° C., and this is not yet the extreme limit. M. Miquel, of the Montsouris Observatory, has reported a living organism, the Bacillus thermophylus, pupils, as teaching a love of country was, found at a temperature of 70 71° C. Now comes Van Zieghem and reports another micro-organism which thrives in water at a temperature of 74° (165' F.). and M. Glabig has found several analogous organisms. Finally M. Th. Schoesing, jr., reports that in making some investi gations as to the heat developed by decomposing dung-piles, he found a putrefaction ferment in intense activity at 167° F., and that the activity of this ferment does not cease below 177° F. At this temperature egg albumen and serum coagulate, and the palm of the to prove his knowledge of each step. Get ordinary man's hand would be severely the dullest pupil to black hoard as often as burned by a piece of metal heated to this possible. degree. On the other hand, the experiments of French physicists have demonstrated that trichinous ham, which had been cooled far below zero for several hours, when thrown into warm water developed the trichina in a lively state. The experiments of Cailletet and Pictet show that microbian life continues and life may be resuscitated after exposure The statement is credited Dr. Burton [ as far below freezing-point as the abovecited instances are above it; so we know

J. M. McKenna. D. L. Mitchell. Mr. Mitchell, the returning President, gave a practical address on the benefit of Teachers' Institutes, and called on all the teachers to unite and make the meeting a

DR. INCH'S ADDRESS. Dr. Inch. Chief Superintendent of Edueation, next addressed the Institute. began by emphasizing the necessity of Teachers' Institutes, and the great benefit to be derived therefrom, particularly by teachers, who are to a certain degree cut off from communication with other teachers. A teacher in order to be a success in his profession must be a student all his life. He ought to be a lover of good books, and let no day pass without devoting a certain time to study, so that he may keep up with the intellectual march of progress. He should be methodical in his studies, and have a cermore benefit from his reading. Particular best authors as models. Dr. Inch deprecated the idea of spending too much time in reading the daily papers, as they turned the mind from deeper subjects. In conclusion Dr. Inch appealed to the teachers to try to inculcate a spirit of patriotism in their

in his opinion, a duty second to none. MISS WRIGHT'S PAPER. Miss V. C. Wright read a paper on Practical Arithmetic for Grades I to IV. Practical Arithmetic should be introduced in Grade I. in development of number. Questions should be varied to suit different grades. Interest could be kept up by use of objects. Questions involving the four rules may be made too complicated for 4th Grade work. Reason and memory should be exercised in practical arithmetic. Begin with analysis in mental arithmetic. Have pupil write out results partially as well as fully,

The paper was discussed by Messrs. McIntosh, Mersereau, Yorston and Mc-Kenna, and Misses Curran, Creighton and Coughlan,

Institute then adjourned. Second session opened at 2,30, the President, Mr. McKenna, in the Minutes of last meeting read and approved. Mr. Yorston read his report, as Sec. Treasurer, showing a balance on hand of \$12.20. It was placed in the hands of the Audit Committee, Messrs. Clarke and Mitchell, who reported it correct, and motion it was adopted.

was then resumed. Dr. Inch said the teacher should keep in view-developement of the medium is-Never tell a child what he can find out for himself. But however good a rule the teacher must exercise common

sense in its application. Mr. J. L. Stewart compared the educational methods of to-day, with those employed in his school days. He believed in exercising memory. One could commit passages to memory and digest them at leisure. The eye, ear, memory, reason, all should be cultivated. Institutes do away with individual fads, and the minds of the teachers are broadened by contact with their fellow teachers.

pupils on 'The Transformation of Insects. The children's attention was called butterflies in spring, flitting from flower to flower, looking for a suitable place to deposit their eggs. They must have a food. The under side of the leaf is chosen because it is rough, and protected from heat and wet. Eggs about the size of a pin-head, two or three hundred of themhatch caterpillars, which eat their bed, the leaf. This is the destructive stage. The caterpillar grows so fast that he casts his skin several times; eats 1000 times his own body; mouth, tough to est tough leaves: McLean distributed butterflies for examina-

Mr. Mersereau thought the lesson excellent, as Miss McLean made the children do the work, and only supplemented it. Our educational methods exercise the faculties, and development follows. The teacher must have the knowledge first, and then stimulate the pupil to acquire knowledge for himself. The paper was favorably commented upon and discussed by Dr. Inch. Mr. McKenna, Miss Carran, Mr. Mitchell

Dr. Inch next answered questions from the Question Box. In answer to the question-'Should left-handed pup Is be taught to write with the right hand?" Mr. Mer. sereau answered. Yes. In answer to, 'To what extent may monitors be employed in schools?" Mr. Mersereau said he believed in it, as the children liked to work and were benefitted by it. He thought there should be a regulation in regard to it. Dr. Inch's attention had been called to it, and he would give it his attention at the proper

TEMPERANCE TEACHING. Mr. Mitchell introduced several members of the W. C. T. U., and the Institute was addressed by Mrs. Salter, who extended the greeting of the Society to the Institute. She asked the teachers to daily inculcate principles of Temperance in their pupils. In reply Dr. Inch said that all teachers were in sympathy with the Temperance reform, and were doing all in their power Mr. Mersereau said that any moral re-

form that had women for advocates was almost sure of success. THANKS TO DR. INCH. A vote of thanks was then tendered Dr

Inch for the assistance he had rendered the Institute. In reply, Dr. Inch said it was to him a great pleasure to attend, and he thanked the Institute for their kindly recognition of his presence, although it was rather in the line of his duty. When all things were considered he thought greater progress had been made in this Inspectorate than in any ther; and he expected the schools town of Chatham, and the teaching done therein, to be models for the northern part

of the province. The third session opened at 9:30 Thursday, President McKenna in the chair. After the reading of the minutes, Mr. James McIntosh read a paper on

VERTICAL WRITING.

First he asked what features are essential in writing. If the vertical system did not possess these features it was not good. Writing must be legible and rapid. He thought the angular system most rapid and easy. The vertical system cannot be rapid for two reasons-1st, because the fingers have not ball and socket joints; 2ad, on account of the manner of holding the pen, the hand has to be lifted and moved after writing a few inches. He then showed some absurdities and inaccuracies in the McMillan series of vertical writing.

Miss Anna McIntosh also read a paper on the same subject, which opposed to some extent the views advanced by Mr. McIntosh. The three qualities aimed at are legibility, rapidity and beauty. The third quality was never attained while under the eve of the teacher who obliges the pupil to take the constrained position prescribed by our writing books. Grace of movement is only attained when the writer takes a natural position. The vertical sys- and its health. The teacher should aim to tem is not a change of system, but merely the taking of natural position, and the do best for himself. He must not push the Anderson. vertical hand follows as a matter of course The vertical system is the best because—1st, teacher when leaving a school should not natural position; 2ad, both eyes are exercised equally; 3rd, the hand is not cramped; 4th, natural transition from print script; 5th, preserves individual style; 6th, more legible; 7th, more easily learned and taught; 8th. requires 30 to 40 per cent less space; 9th, more rapid; 10th, removes causes of disorder in the school room.

The papers were discussed by Messrs. Mersereau, Yorston and McKenna, and of the Institute. Then adjourned sine die. Misses Coughlan, Haviland and others. Mr. D. Ferguson thought that the reason better writers were made in schools in former times was because more time was given to the subject. TEACHING SOUNDS.

Miss Creighton read a paper on Teaching Sounds. She began in the second term, not

and unanimously adopted :-1st. That a free donation of £25 Stg. be sent to the Parent Society this year. 2-That the following office-bearers be appointed :-President-Miss Chalmers,

The following resolutions were moved

Vice-Presidents-Mrs. Snowball, Mrs. Park, Mrs. Watt, Mrs. Habberly, Mrs. McCoy, Mrs. Steel. Treasurer-Mrs. McCurdy. Secretary-Mrs. Aitken. 3-That a general committee be appointed

take into consideration the intellectual Mrs. Tweedie, Mrs. A. A. Anderson and

From St. Luke's Church, Chatham, Miss' Tweedie, Mrs. Haviland and Mrs. Fisher. 5 -That the above committee select and appoint collectors for the various districts. 7-That the next annual meeting be held in Chatham at the usual hour in the after-

8-That the office bearers are instructed to prepare an interesting and instructive programme for the evening meeting. 9-That a vote of thanks be given to

gratuitous advertising. It will be noticed that our free donation to the Parent Society is less this year than usual. This may seem to indicate a lack of prosperity. But it actually does not. It arises neither from any want of energy on the part of the members of the Society. nor from any want of liberality on the part of the surrounding community. It arises simply from hard times. Trade and business, all over the Miramichi, have this year been much depressed. Every kind of industry seems to have suffered. Money has been very scarce. In fact we all feel that the people, in the circumstances, have acted towards the Society very liberally. We look forward with large hopes. We feel assured that as God has abundantly blessed our Bible Society in the past He will not forget it in the future. Ours is a noble cause—the universal God's word. It claims our utmost zeal.

JANE AITKEN. The Manse, Newcastle, Oct. 12, 1896.

### The Chief Organ

of Order Paine's Celery Compound is Your Only Hope.

and Health.

Too few recognise the fact that the stomach is the chief organ of the body. When this great and guiding organ is out of order, every other organ depending on it for nourishment is affected by sympathy. So long as digestion is properly performed, and healthy fluids secreted from the food. is inactive the system is impoverished, and

disease rapidly develops. If your stomach is rebellious and out of gear, be assured your whole system will soon give evidence of trouble, and your life will be a miserable one.

When you suffer the tortures of indigestion and dyspepsia, just remember that Paine's Celery Compound has brought ease, comfort, happiness and health to thousands

the Restigouche and Victoria colonization Railway Company do not appear to be in a very satisfactory condition. Engineers were engaged in making surveys last spring and summer and the president of the company-Mr. Boosley-a Toronto gentleman, was at times on the ground and succeeded in establishing a credit for his organization with local people, which the amount of "sinews of war" behind the undertaking does not seem to have warranted. At all events nothing has been done in the way of surveying or other work since July and people are wondering how it happened that the whole business was so long floated on such a speculative basis, The engineers,
