Spectacles
The undermentioned advantages are claimed for Mackenzie's spectacles, viz.—That from the peculiar construction of the Glasses they resist and Preserve the sight, rendering frequent changes unnecessary.
—That they confer a brilliancy and distinctness of vision, with an amount of Ease and Comfort not hitherto enjoyed by spectacle wearers.
—That the material from which the Lenses are ground is manufactured especially for optical purposes, by CHARLES BARDOLPH'S improved patent method, and is Pure, Hard and Brilliant and not liable to be scratched.
—That the frames in which they are set, whether in Gold, Silver or Steel, are of the finest quality and finish, and guaranteed perfect in every respect.
The long evenings are here and you will want a pair of good glasses, so come to the Medical Hall and be properly fitted or no charge.

Run by Women.
The State Besjukovschina, in Russia, is probably the only place in the world that is run entirely by women. This state is made up of seven villages, each presided over by a Mayoress, the whole under the supervision of a lady named Sashka, who acts as President. There are women Magistrates, women preachers, women policemen—in fact, every capacity in the state is filled by women. The roads are made by women, and women sell milk and deliver letters. If you want to bring an action against your neighbor in this state you go to a woman lawyer; and if there is anything in your house to be stolen, then a burglar of the weaker sex steals it. No place of any importance is filled by a man.
SYMPATHY.
Watts—I think I feel as bad as Mudge does over his losing his job.
Potts—I feel worse. He's already touched me for ten.

IMAGINATION AND DISEASE.
How a doctor's letter almost killed a comparatively healthy man.
In "A Journalist's Note-Book" Frank F. Moore tells an amusing and significant story of the influence of imagination upon health. A young civil servant in India, feeling fagged from the excessive heat and from long hours of work, consulted the best doctor within reach. The doctor looked him over, sounded his heart and lungs, and then said gravely: "I will write you to-morrow."
The next day the young man received a letter telling him that his left lung was gone and his heart seriously affected, and advising him to lose no time in adjusting his business affairs. "Of course you may live for weeks," the letter said, "but you had best not leave important matters undecided."
Naturally the young official was dismayed by so dark a prognosis nothing less than a death-warrant. Within 24 hours he was having difficulty with his respiration, and was seized with an acute pain in the region of the heart. He took to his bed with the feeling that he should never arise from it. During the night he became so much worse that his servant sent for the doctor.
"What on earth have you been doing to yourself?" demanded the doctor. "There were no indications of this sort when I saw you yesterday."
"It is my heart, I suppose," weakly answered the patient.
"Your heart!" repeated the doctor. "Your heart was all right yesterday."
"My lungs, then."
"What is the matter with you, man? You don't seem to have been drinking."
"Your letter!" gasped the patient. "You said I had only a few weeks to live."
"Are you crazy?" said the doctor. "I wrote you to take a few weeks' vacation in the hills, and you would be all right."
"Heavens!" cried that gentleman, as he glanced at it. "This was meant for another man. My assistant misplaced the letters."
The young man at once sat up in bed and made a rapid recovery. And what of the patient for whom the direful prognosis was intended? Delighted with the report that a sojourn in the hills would set him right, he started at once, and in five years later was alive and in fair health.

Oh the Farm.
MILKING TIME.
If there be one time above all others when peace and quietness should reign supreme in the stable, it is during the milking hour. Let us reason out why we should not irritate or in any way excite the cow at this particular time, writes Laura Rose, of the Ontario Agricultural College Dairy School.
First we will briefly consider what milk is, and how produced. The average composition of milk is: fat, 3.6 per cent; casein, 2.5 per cent; albumen, 7 per cent; sugar, 6.0 per cent; mineral matter, .7 per cent; water, 87.5 per cent.
We know that milk is made from the food the cow eats, and that the food is first converted into blood; after that the process it undergoes is, as yet, largely a mystery.
There are two general theories advanced—the metamorphic and the transudation. The advocates of the first claim that the cellular tissue of the udder is built up and then broken down, and so changed into milk. This theory cannot be accepted as the only source of milk production, for it would be hardly possible for a cow giving from sixty to eighty pounds of milk a day to build up and break down her udder four or five times in the course of twenty-four hours.
The transudation theory is that the milk is simply filtered from the blood as it passes through the udder.
If this be true, then we would expect to find in the blood the same properties, to a large extent, as are in milk. Such is not so, for the blood contains but a small per cent. of the constituents found in milk. A combination of the two theories is a reasonable solution of the process of milk production, the fat, casein and sugar to a large extent being formed in the udder, while the other properties are filtered from the blood.
When is the milk manufactured? Just while you are milking the cow! This fact I want to impress the most deeply.
The manipulating of the teats excites the nerves in the udder, thus stimulating the milk secretion. Any harsh treatment, fright or unusual excitement prevents the nerve action in the udder. We say "the cow is holding her milk" in reality she has ceased to make it.
One hasty blow not only materially lessens the quantity of milk, but also affects the quality, and experiments along this line have shown that it takes several milkings to bring a very sensitive cow back to her normal record.
If the nerves have no part in the milk secretion, then the hornly would not cause a shrinkage in the flow of milk, nor would the milking and barking of the dog as he drives the herd from the meadow have a like effect.
To insure pure milk the atmosphere in which the cows are milked must be pure. Putting down hay or cleaning out the stable just before milking is bad practice. The milk in passing from the teat to the pail through an atmosphere laden with stable odors and dust may become sufficiently contaminated to materially affect the flavor of the butter.
For similar reasons we hear milking in the barnyard condemned, especially in dry, dusty weather.
I noticed in England the farmers had milking sheds in or near the pasture fields, and that the men had long linen suits which they slipped on when going to milk. I thought this a good idea, as it tended to cleanliness in milking and also to a saving of the clothes.
Before starting to milk, the flanks and udder of the cow should be wiped with a damp cloth to remove loose hairs and dirt, which otherwise might fall into the milk pail.
It is found a good practice to cut out the milk in the morning from the hind quarters when putting her in for winter. Endeavor as far as possible to have the cows milked by the same persons, at the same hour, in the same place, and in the same order.
Milk with dry hands, vigorously and exhaustively washed, will affect the milking period more than by getting the last drop, and remember the first pint has but one per cent. butter, while the last pint has ten per cent.
Bacteriologists tell us the small amount of milk which has collected in the teat abouts with injurious forms of bacteria, while the remaining portion of the milk is practically germ free, and they recommend wiping the teats with a clean cloth into the milk pail.
I have often heard a person say, "I can get more milk from that cow than any other," or "This cow will not let another person near her." Why is it? In such cases there is between the cow and her milker a sympathy of nerves. The cow has some mysterious way crept into her affections, and it is her pleasure and delight to have her regard in the milking pail. Does this sound sentimental? There is far more truth

than poetry in it. Get a cow to love and trust you by feeding and caring for her kindly and she will repay you by bringing you in additional dollars and cents.
CONDITION IN CATTLE AND HORSES.
"Condition" in a horse has a very different meaning to the same expression as applied to cattle. In the case of the latter, the more heavily fleshed the animal is the better is its "condition" reputed to be, whereas in the case of horses it is not great wealth of flesh, but great muscular development, so essential to the performance of the work expected of it, that constitutes the highest condition. A considerable weight of flesh is of course necessary for animals which are used for draft purposes, because in such cases "weight" tells, but in the case of animals required for fast work it is their hard muscle rather than their preponderance of flabby flesh that is especially required. Good condition can only be obtained by the use of proper foods, and for this purpose there is nothing better than a ration having for its basis good oats and sweet, well saved hay. Oats should be the "foundation" of all rations for horses.
PRUNE LOW.
Don't let those fruit trees run away up out of your reach; there are lots of disadvantages in tall trees, and not one single advantage. It is more work to prune the trees; more work to thin the fruit, of course you do thin the fruit; more work to spray, and to pick the fruit. If any of the fruit is bruised or badly injured, and if you fall while picking fruit from these tall trees you would perhaps get a broken arm or leg and perhaps a broken neck.
SPRING SMILES.
Mrs. Bunt—The new tenants next door are not a bit neighborly. Mr. Bunt—No; I notice they keep their confounded piano going almost constantly.
Dorothy—Papa, we girls have a new name for those men who call on us but never take us out anywhere. Papa—What is it, daughter? We call them fireside companions.
Milliner—This hat will last you several seasons, Miss Flyhigh. Miss Flyhigh—Oh, I don't want that kind of a hat; show me one that won't be fit to be seen in about four weeks.
Hix—What would you think of a man who divulged a secret intrusted to him? Dix—Well, I should think he was on an equal footing with the man who intrusted it to him.
Mother, sternly—He kissed you twice to my knowledge, and I don't know how often after that. Daughter—Neither do I, ma. I never was much good at mental arithmetic.
Merchant—I think I'll have to fire your friend Polk. He's frightful lazy. Friend—Slow in everything, but he'll get it done. Merchant—Well, no, everything. He gets tired quick enough.
Ryan—An' did you find th' Frinch' th' polioest puple in th' wurld? Shea, after his trip abroad—O! did that. Why, ivory teats Old' call down wan av th' frog-eaters, he'd hand me his case.
Mr. Gimp—Did you tell Judge Dwiggs that I was waiting to see him? Office boy—Yes, sir. Mr. Gimp—Did he see pleased? Office boy—Oh, yes, sir. He said: "The dickens he is!"
What am I to get for it? asked the ward politician. Oh, you'll be taken care of, answered the boss. Not any, returned the politician. I'll have to see the cash. I'm no faith healer.
He—You don't give me credit for doing anything well. She—Oh, yes, I do. General—At least one thing you can do better than any one else. He—And what's that? She—Make a fool of yourself.
London, May 4.—The latest list of casualties in South Africa shows that 271 officers and 2,532 men have been killed, 664 officers and 9,225 men wounded, 171 officers and 3,925 men missing. Sixty-four officers and 2,028 men have died from various diseases.

DOMESTICS IN CHINA.
The question of domestic service in China is by far an easier proposition than in most other countries. In China a rich man gets as many servants as he wants, and yet he pays none no wages, while the common people have to pay them well. Even then they are hard to get, for the reason that the employer of the rich man can make more than triple the ordinary wages in perquisites.
Mrs. Rivers—Do you find your new neighborhood pleasant?
Mrs. Brooks—Very. My nearest neighbor, Mrs. Banks, and a Mrs. Peters, are on the outs, and both come to me with stories about the other.

With Rich Red Blood
Throbbing Through the Arteries Weakness and Disease are Impossible—Dr. Chase's Nerve Food Makes the Blood Pure, Rich and Healthy.
Not a single day passes but we are reminded of the value of keeping the body supplied with an abundance of rich, red, life-sustaining blood. The nerves, the brain, the muscles and nerve paralysis can only exist when the blood is in a thin, watery condition. It is very pneumonia and consumption cannot find a beginning in the healthy body, which is supplied with plenty of pure blood to rebuild and reconstruct the tissue wasted by disease.
To guard against disease, to prolong life, to insure health, strength and vigor to every organ you cannot possibly find a means so effective as Dr. Chase's Nerve Food, the blood builder and nerve restorative.
Dr. Chase's Nerve Food is composed of the very elements of nature which go to form new, rich, red blood, and this accounts for its phenomenal success as a system builder. It is as certain as the laws of nature, because it gets away down at the foundation of disease and cures by making the blood pure and rich.
Mrs. E. McLoughlin, 85 Parliament St., Toronto, states—"My daughter was pale, weak, languid and very nervous, her appetite was poor and changeable, she could scarcely drag herself to her feet, and her nerves were completely unstrung. She could not sleep for more than half an hour at a time without starting up and crying out in excitement.
"As she was growing weaker and weaker, I became alarmed, and got a box of Dr. Chase's Nerve Food. She used this treatment for some weeks and from the first noticed a decided improvement. Her appetite became better, she gained in weight, the color returned to her face, and she gradually became strong and well. I cannot say too much in favor of this wonderful treatment, since it has proven such a blessing to my daughter."
To allow the blood to get weak, watery and vitiated is to prepare the way for pneumonia, consumption, kidney disease, or other dreadfully fatal complications. Dr. Chase's Nerve Food prevents and cures disease by creating an abundance of rich blood and nerve force in the system. In pill form, 50c a box, at all dealers, or Edmondson, Bates & Co., Toronto.

The Boy Was Benefited.
"The other afternoon," said the man in the box office of a theater, "a boy came to me and said, 'Are these any good?' and I took from him two front row seats for that night which had been torn into a hundred pieces or so and then cleverly pasted together again. 'Oh, yes, my child, but how did this strange accident happen to the tickets?'
"The boy replied: 'Why, papa came home with them last night and showed them to mamma, and he seemed to be on heaven's sake when got married to mamma though it would be a good time then to tell him how she owed over \$100 for provisions. She told him of it, but he got so mad that he said that every night now he wouldn't come home till after 12 o'clock, and he told me for heaven's sake when got married to look out for a sensible woman. All the time mamma laughed, and he was getting madder, and so he said she wouldn't go to the theater with him after that, and he tore the tickets up and rushed out somewhere alone. He didn't pick up either, but mamma took care. I picked up the pieces of the carpet and pasted them together, and if you'll exchange the tickets for matinee ones I guess I'll come down on Saturday with some other fellow and take in the show.'
"I gave other tickets to the candid kid, and the walker away got married pleased with himself."—Philadelphia Record.

Nerves and Hair Picking.
"Persons whose nerves are in any way out of gear should not pick hair," observed a well known specialist in nervous diseases to a reporter, "and indeed I am almost willing to go further and to say that they should not handle mattresses or pillows stuffed with hair. The tactile nerves, the nerves that are located in the ends of the fingers, seem to be specially affected by handling of hair or animal wools of any kind.
"Many good housewives do themselves great injury in picking hair in the repair or alteration of mattresses, and while they think they will save money by doing such work themselves they often find out that, besides the personal suffering in consequence, they pay out many times in doctors' and medicine bills what they save from mattress makers.
"I know of some persons, men more frequently than women, however, who would be thrown into nervous spasms if they were compelled to handle velvet for 15 minutes—that is, to handle it on the fuzzy or velvety side. Those who are unpleasantly affected by velvet know it and therefore avoid it as much as possible."—Washington Star.

The Spider and the Tuning Fork.
A gentleman was recently watching some spiders, when it occurred to him to try what effect the sound of a tuning fork would have upon them. He suspected that they would take it for the sound of a fly. He selected a large, ugly spider, and he placed it on a fly for about two months. The spider was at one edge of its web. Sounding the fork, the man touched a thread at the other side and watched the result.
Mr. Spider had the buzzing sound conveyed to him over his telephone wires, but how was he to know on which particular wire it was traveling? He ran to the center of the web very quickly and felt around until he touched the thread against the other end of which the fork was sounding; then, taking another thread along, just as a man would take an extra piece of rope, he ran out to the fork and sprang upon it. Then he retreated a little way and looked at the fork. He was puzzled. He had expected to find a buzzing fly. Then, strange to say, he got on the fork again and danced with delight. Evidently the sound was music to him.
The Point of View.
The Bird in the Bush assumed his most winning aspect and addressed the Bird in the Bush.
"It is conceded," said he, "that my position renders me worth twice as much as you are, but I will trade places with you, even up, asking nothing to boot."
But the Bird in the Bush thought he could detect something of distinguishedness in this seemingly magnanimous offer and flew away.—Detroit Journal.
The Real Thing.
Johnny (who is jealous of mamma)—Mamma likes me better than she does you.
Evelyn (who enjoys teasing)—Why, no, Johnny. Of course she loves Betty and me best. Just think, she was our mother long before she was yours!
Johnny (scornfully)—Hoh! What of that? You are nothing but a sample copy, anyway! And Betty's only a trial subscription! But I am the real thing!—Life.
And He Knew.
"Algeron is very interesting," said the stockbroker's daughter.
"What does he talk about?" inquired her father.
"Why, he's ever so well posted in Shakespearean quotations."
"Young woman," said the financier sternly, "don't you let him deceive you. Don't you let him make sport of your ignorance. There ain't no such stock on the market."—London Standard.

How Dan Rice "Fixed It."
To Dan Rice the people of Lewiston are indebted for their town clock. He exhibited his citizens in this town in the office without a license and the next day was arrested at McVeytown. So that his show might not be delayed he promised to give a clock to the town if he was permitted to go on, and he kept his promise faithfully.—Lewiston (Me.) Free Press.
There is no surer mark of the absence of the highest moral and intellectual qualities than a cold reception of excellence.—Bailey.
Almost There Already.
Miss Fortes—Yes, dear, we have been engaged for a long time, but what has prevented me from taking the irrevocable step has always been the fateful question, "Will he love me when I grow old?"
Miss Tenny—Don't worry, darling; you'll soon know now.—Stray Stories.
