CAN DIERS.
Iron Pipe Valves and Fittings Of All Kinds.
DESIGNS, PLANS AND ESTIMATES FURNISHED ON APPLICATION.

THEY CURE EACH OTHER.
MICROBES ARE WELCOMED BY SOME AILING PEOPLE.
Best Cure for Several Diseases is an Attack of Some Other Disease.
"Set a microbe to catch a microbe" is a proverb. The cases which led to the discovery are very interesting.
Come time ago, at Brixton, London, a lady and her husband were attacked by quinsy at the same time. When this was at its height and the patients were almost choked with the swelling in the throat, the husband had a sudden attack of cholera. A BAD FIT OF THE GOUT in his toe. This turned out a blessing in disguise. For, as if by magic, his quinsy disappeared immediately. The wife's quinsy showed no signs of abatement, but the usual course, thus proving that the gout, in her husband's case, cured the quinsy.
A South Kensington there lived a lady who suffered so severely from dyspepsia that she was on the point of losing her reason. Doctor after doctor tried his hand, but without avail. But one day the patient developed eczema on the back of the neck. For the first time in ten years she felt hungry, ate a good dinner, and felt quite free from dyspepsia. When the eczema disappeared, however, the indigestion returned. Later on the eczema came back, and the indigestion went. And the two diseases have continued to keep at this see-saw up to date.
Cholera is another cure for chronic dyspepsia. A gentleman lives in North London who had to give up his business and travel to the terrible state of his stomach. He happened to go to Hamburg when cholera was raging in that city, and he was struck by the disease. He pulled through, and found when he recovered, that his dyspepsia had gone. Since then he has been in perfect health, and says he could digest horse hoofs, or even boarding-house roast beef.
But much more serious ailments than dyspepsia have been cured by these diseases, and so successful are one or two diseases, that the medical diet that they are being used in Germany at the present moment. The German doctor has added to his pharmacopoeia the poisons of typhoid fever and erysipelas. Of course, he uses them most carefully, gives the smallest possible dose, watches how it acts, and keeps it under strict control.
Used with proper care and judgment, typhoid fever can be made to cure diabetes. It is supposed that the typhoid bacillus eats all the sugar, and causes some mysterious change which prevents the waste of any more of this substance.
Typhoid fever also cures AN EXHAUSTING DISEASE called leucocythaemia. This arises from the presence of too many white corpuscles in the blood. When the typhoid germs enter the blood these white corpuscles make instant war on them, and the result is a very heavy, that the patient is rid of both enemies.
When anyone is afflicted with rheumatism, nothing better could happen to him than to get an attack of typhoid fever. Innumerable cases are on record where people crippled by most painful rheumatism have been perfectly cured by typhoid fever. It has also cured skin diseases, sores over which antiseptic dressings had no influence; it has caused the absorption and disappearance of tumors, and has cured cancer, on account in the treatment of cancer. It has also cured many cases of consumption. But its most successful cures have been effected in the lunatic asylum. For a long time it has been known to asylum physicians that the most violent mania subsides when the patient gets some severe fever, and typhoid fever is especially effectual. This knowledge is now being turned to account, and when all other means have failed, the patient is given a dose of typhoid bacilli. In a few days his madness begins to fade away. And by the time that he has recovered from his fever, he is perfectly sane once more. But, though the cure is often permanent, it sometimes is effective only for a time.
Erysipelas holds the next place to typhoid fever, and it is often used by doctors as a remedy because of the ease with which it can be controlled.
Erysipelas has cured the worst form of eczema of thirty years' standing. This is a wonderful feat, for eczema is one of the most intractable of diseases. But erysipelas waters other wonders. It has been known to cure cancer, to cure lupus, and many kinds of skin diseases. It has permanently cured epilepsy, and has removed a polypus from a man's nose.
It would be supposed that nothing good could be said of influenza. But the writer of these notes has seen sometimes makes compensation for the injury he does. In fact, he is a most powerful curative agent at times. A lady who had consulted the doctor for many years for a chronic catarrh got a bad attack of influenza a couple of years back, and on the very day of the attack the catarrh disappeared. Influenza has cured chronic bronchitis, and other diseases, and may, under proper control, become a very useful remedy.
Typhus fever is too terrible an agent to employ voluntarily. But when it comes of itself it sometimes does good. An Indian Army officer records that of this disease he never was so bad that he could scarcely eat sufficient.
He had become more skin and bone, when, fortunately for him, he was attacked by typhus fever. On recovering from this he found his liver enlarged, and he had a very bad case of typhus fever since. Typhus fever also cures erysipelas, dypsis, consumption, and St. Vitus' dance.
Now, it has been shown that eczema, cholera, dyspepsia, erysipelas, cholera, and typhus fever cures erysipelas. Obviously, all we know want is something that will make typhus fever harmless, and we have a certain cure for dyspepsia. And to a great many people this cure would be cheaply bought at the cost of the whole of their lives.
Many deaf people recover their hearing for a time on getting a fit of dizziness. And others, who suffer severely from dizziness, are relieved by an attack of deafness. A girl in a London hospital was lately cured

THE WORLD'S GOLD.
Additions That Have Been Made to It In Recent Years.
The annual meeting of the Royal Statistical Society was held on Tuesday in the rooms, Adelphi Terrace, London, Lord Avebury presiding, says the London Telegraph. Afterward a paper was read by Wymard Hooper on "The Recent Gold Production of the World," in which he gave a statement of that production in five yearly periods since the year 1851, showing the value of the mineral won, according to the various standards of valuation. After remarking on the way in which that valuation had fluctuated, and on the effect which modern improved methods would be likely to have in the gold fields where a large amount of stuff even of inferior grade, was likely to be available, he showed the output of gold during the last twenty years, classifying it according to the countries of its origin. From this it appeared that of the five great gold producing areas, only Russia seemed not progressive. The author affirmed that, whatever the world's stock might have been, there could have been no material additions to it until, at all events, within the last five years and probably till within the last five years only, but that there was every probability of a material addition being made within the next five or ten years.
Taking the period of 1870 to 1886, Hooper showed that, assuming the requirements of the world of the coinage to be, say, £20,000,000 a year, there could not have been added, on balance, to the stock of gold more than, say, £1,000,000 a year,

Influenza has cured chronic bronchitis, and other diseases, and may, under proper control, become a very useful remedy.
Typhus fever is too terrible an agent to employ voluntarily. But when it comes of itself it sometimes does good. An Indian Army officer records that of this disease he never was so bad that he could scarcely eat sufficient.
He had become more skin and bone, when, fortunately for him, he was attacked by typhus fever. On recovering from this he found his liver enlarged, and he had a very bad case of typhus fever since. Typhus fever also cures erysipelas, dypsis, consumption, and St. Vitus' dance.
Now, it has been shown that eczema, cholera, dyspepsia, erysipelas, cholera, and typhus fever cures erysipelas. Obviously, all we know want is something that will make typhus fever harmless, and we have a certain cure for dyspepsia. And to a great many people this cure would be cheaply bought at the cost of the whole of their lives.
Many deaf people recover their hearing for a time on getting a fit of dizziness. And others, who suffer severely from dizziness, are relieved by an attack of deafness. A girl in a London hospital was lately cured

THEY CURE EACH OTHER.
MICROBES ARE WELCOMED BY SOME AILING PEOPLE.
Best Cure for Several Diseases is an Attack of Some Other Disease.
"Set a microbe to catch a microbe" is a proverb. The cases which led to the discovery are very interesting.
Come time ago, at Brixton, London, a lady and her husband were attacked by quinsy at the same time. When this was at its height and the patients were almost choked with the swelling in the throat, the husband had a sudden attack of cholera. A BAD FIT OF THE GOUT in his toe. This turned out a blessing in disguise. For, as if by magic, his quinsy disappeared immediately. The wife's quinsy showed no signs of abatement, but the usual course, thus proving that the gout, in her husband's case, cured the quinsy.
A South Kensington there lived a lady who suffered so severely from dyspepsia that she was on the point of losing her reason. Doctor after doctor tried his hand, but without avail. But one day the patient developed eczema on the back of the neck. For the first time in ten years she felt hungry, ate a good dinner, and felt quite free from dyspepsia. When the eczema disappeared, however, the indigestion returned. Later on the eczema came back, and the indigestion went. And the two diseases have continued to keep at this see-saw up to date.
Cholera is another cure for chronic dyspepsia. A gentleman lives in North London who had to give up his business and travel to the terrible state of his stomach. He happened to go to Hamburg when cholera was raging in that city, and he was struck by the disease. He pulled through, and found when he recovered, that his dyspepsia had gone. Since then he has been in perfect health, and says he could digest horse hoofs, or even boarding-house roast beef.
But much more serious ailments than dyspepsia have been cured by these diseases, and so successful are one or two diseases, that the medical diet that they are being used in Germany at the present moment. The German doctor has added to his pharmacopoeia the poisons of typhoid fever and erysipelas. Of course, he uses them most carefully, gives the smallest possible dose, watches how it acts, and keeps it under strict control.
Used with proper care and judgment, typhoid fever can be made to cure diabetes. It is supposed that the typhoid bacillus eats all the sugar, and causes some mysterious change which prevents the waste of any more of this substance.
Typhoid fever also cures AN EXHAUSTING DISEASE called leucocythaemia. This arises from the presence of too many white corpuscles in the blood. When the typhoid germs enter the blood these white corpuscles make instant war on them, and the result is a very heavy, that the patient is rid of both enemies.
When anyone is afflicted with rheumatism, nothing better could happen to him than to get an attack of typhoid fever. Innumerable cases are on record where people crippled by most painful rheumatism have been perfectly cured by typhoid fever. It has also cured skin diseases, sores over which antiseptic dressings had no influence; it has caused the absorption and disappearance of tumors, and has cured cancer, on account in the treatment of cancer. It has also cured many cases of consumption. But its most successful cures have been effected in the lunatic asylum. For a long time it has been known to asylum physicians that the most violent mania subsides when the patient gets some severe fever, and typhoid fever is especially effectual. This knowledge is now being turned to account, and when all other means have failed, the patient is given a dose of typhoid bacilli. In a few days his madness begins to fade away. And by the time that he has recovered from his fever, he is perfectly sane once more. But, though the cure is often permanent, it sometimes is effective only for a time.
Erysipelas holds the next place to typhoid fever, and it is often used by doctors as a remedy because of the ease with which it can be controlled.
Erysipelas has cured the worst form of eczema of thirty years' standing. This is a wonderful feat, for eczema is one of the most intractable of diseases. But erysipelas waters other wonders. It has been known to cure cancer, to cure lupus, and many kinds of skin diseases. It has permanently cured epilepsy, and has removed a polypus from a man's nose.
It would be supposed that nothing good could be said of influenza. But the writer of these notes has seen sometimes makes compensation for the injury he does. In fact, he is a most powerful curative agent at times. A lady who had consulted the doctor for many years for a chronic catarrh got a bad attack of influenza a couple of years back, and on the very day of the attack the catarrh disappeared. Influenza has cured chronic bronchitis, and other diseases, and may, under proper control, become a very useful remedy.
