CHATHAM, N. B., JULY 3, 1902. THE KING is reported out of danger. Ministerial Bad Faith in Fishery Matters.

There is much reason for the feeling that those in charge of Dominion fishery administration care little for the maintenance of the salmon and trout fisheries of New Brunswick, at least, although they must be fully sensible o the fact that the greatest firmness necessary in refusing to open up new opportunities for bringing about the gradual extinction of these valuable natural assets of the country, as has ractically been done along the Atlantic coast of the northern United States.

The regular diminution of the numbers of salmon and trout frequenting Canadian rivers flowing through partially settled areas led, years ago, to the adoption of a restrictive policy in regard to net-fishing. The netting of HICKEY'S DRUC STORE trout was everywhere prohibited about fourteen years ago, and a most inconsiderate measure, the netting of salmon all over Canada in non-tidal waters, was ordered by act of the Dominion Parliament about the same

> The fact seemed to be borne in upon the Minister of Fisheries of that period that the business of netting salmon and trout was overdone to suc an extent as to endanger the existence and Cucumber of those fish. Neither the minister, however, nor anyone to whom he could readily look for advice, appeared to think it necessary to go to the trouble of judiciously applying a restrictive policy. They seem to have found it easier not to inform themselves on the subject. Their location and its environment at Ottawa was far away from the habitat of the salmon and sea-trout and they thought it sufficient to neither know nor care enough about the matter to obtain such information as would enable them to act intelligently in the premises. They simply caused a prohibitive act to be passed, regarding salmon, which applied to non-tidal waters of all lengths and widths, while they refrained altogether from making any attempt to remedy, even by restriction, the excessive net-fishing for salmon which was being done in

Mr. Forrest is to be congratulated on nis unique experience and good luck in connection with his interment of the bowlder, which evidently covered objects, comparatively limited semi-tidal waters. experiences before and after the interment Afterwards, the inequality and inunder the bowlder, would form an im justice of their policy became manifest portant and interesting chapter of Miraand they were induced to lessen a few nichi history. of the semi-tidal nets, which had been Canadian Coronation Honors. licensed in defiance of the Fisheries law, and it became the well understood To be Knights Commanders of the m

policy of the two ministers of fisheries immediately preceding the present one that no new salmon net stand, in New Brunswick at least, should be licensed. This was the position of the matter when Sir Louis Davies resigned the office of minister of fisheries to accept increase my business by selling goods cheap- a Dominion Supreme Court judgeship, or than I ever did before. and was succeeded by Hon. James

of the Supreme Court of Canada; The Hon. Robert Boak, president of the legislative council of Nova Scotia. New Brunswick government consented that the Fisheries department at

Ottawa, for the present, at least, should continue to administer all the fisheries. save those of the inland waters still ungranted by the Crown.

The New Brunswick government, it is to be assumed, did not suppose, when they consented to this arrangement, that the Fisheries department at Ottawa would behave in bad faith and depart from its former declared policy to the injury of the provincial interests. But that is precisely what Minister Sutherland has done. He has, whether wittingly or not we cannot say, started out on a policy of licensing salmon nets in waters where they were not allowed by former ministers for many years because they the fish after they had escaped the coast

the salmon have a reasonable chance to

ascend the rivers or not. Short-sighted

tidal-net fishermen, who act as if it were

right to intercept and capture every

salmon that comes on the coast, do

not seem to realise that if they had their

way no parent fish would leave their

Hints to Apple Growers.

DEPARTMENT OF AGRICULTURE.

OTTAWA, JUNE 24, '02. In the older parts of Ontario, such as he counties of Middlesex, Perth, Oxford and Brant, as well as a portion of Huron, where the best apples grew in times gone by, to-day there is a great neglect of young tree planting as well as of pruning, and the natural result is a diminution in the quantity of apples grown and a decline in the quality of the fruit produced, Now in Grey, in the northeastern part of Durham, and in the county of Northumberland, the young orchards are just Back in the spring of 1898 a Maine about equal to the older ones in number. manufacturer of paper predicted that, at showing that planting is there going or the rate at which the spruce forest lands vigorously.

of the United States were then being de-In the former cases there is no doub nuded, there wouldn't be "a stick of the trees were planted from some twentyspruce timber as big as a beanpole in five five to forty years ago, when there was no exact knowledge of, and, perhaps, but already, and the pulp people tell us that apples were in demand, when the soil was t will probably be many years yet before new, when insect pests and fungous we exhaust all our resources of spruce for diseases were rare, and when the only the making of wood pulp. Still, an area skill required was simply to take the fruit. as large as Rhode Island is stripped of its Under these circumstances the business of spruce every year to supply the mills that apple growing was exceedingly profitable; make newspaper alone; and many of the but there soon came a glut of the earlier manufacturers think it is none too early varieties. They were not suitable for the to begin experimenting with other export trade, so that as soon as the home material for paper-making to supplement | market was supplied there was no further were so near tide-heads as to capture the spruce supplies, and even to take call for them. The soil lost something of their place if we cannot grow crops of its virgin freshness; the trees would not grow so well; and with the increased Some good use is found every year for number of trees there came a quadrupled increase in fungous diseases and insect In the museum at the botanical garden pests. Not only was there a falling off in are specimens of rugs and other articles the demand for the particular variety made of a variety of sedge that is found | they were growing, but there was an increased difficulty in growing any variety; This grass was supposed to be worthless | hence farmers got the idea that there was a few years ago, but somebody discovered ino money to be got out of apples, and that it supplies a good, strong fibre, and they let their orchards run wild, they to-day it is being turned into binder allowed noxious insects to multiply and twine, rugs and other things that are fungous diseases to run their course, with the inevitable result that the orchards were almost ruined.

through the counties already named

general belief that there were no insects this year doing any damage. His magnifier soon discovered hosts of insects. The oyster-shell bark louse is very prevalent : the cigar case bearer in some districts was quite numerous; the tent caterpillar was in evidence but not seriously; and the canker worm in some localities was very plentiful; but for multitude the bud moth simply swarmed. The result of finding these pests where they were supposed be conspicuous by their absence, so struck the farmers that Mr. McNeill could hav sold a gross of magnifiers on the spot. I was an object lesson that will never b forgotten; it was nature study in its most tangible form; it was that practical experimenting which leads to the conversion of the desert into a fruitful field, and clothes the dismal prairie with a world's grain yield.

It does not always fall to the lot of a Government to witness the good results of missionary zeal; but here in Canada we are constantly reaping where we have sown, and Mr. McNeill reports that the result of the forward policy of the Minister of Agricul ture has already in the fruit section led farmers in the older portions of Ontario to abandon their former slovenliness and to in for clean civilization ; while in the newer districts the fruit growers themselves s appreciate what has been done to help them that they have become living exponents of the same policy.

To secure and maintain profitable apple cultivation after following out the work necessary, everything depends upon the variety cultivated. The grower must pro duce what the market requires ; the market will no longer be content to adapt itself to the whims of the grower. No matter how healthy or prolific a tree may be, if the be not of the right variety it is valueless Undoubtedly winter varieties are those that are paying best.

The four varieties of apples that are receiving the most attention now are Baldwins, Ben Davis, Greenings and Spies. As these varieties cover only the fall and winter months it is certainly not wise to overlook entirely the early sorts; because announced to take place at Alexandra there must spring up a market for the earlier sorts as soon as the others have g the market securely.

Top grafting has received a great deal of attention this spring. The average farmer thinks there is some mystery about grafting, so it is very gratifying this year to find him amenable to culture on the point. It is gratifying to discover how many farmers are taking up grafting, for where it has been put into practice it has been eminently successful. One Ontario farmer who had never grafted a tree in his life, after hearing Mr. McNeill's lecture some time ago, top grafted a large number in his orchard. his losses were under three per cent. of number grafted.

Grafting should be made a part of every boy's education. Notwithstanding all the care the nurseryman can give to his stock, serious mistakes will be made in the varieties, and if for no other reason than that every lad should know how to perform simple an operation as grafting.

Trees have individualism just as animals have, and for reasons that we cannot explain one tree with apparently no better chance than another growing by its side, of the same variety, will be prolific while the other is comparatively barren.

The best orchards of the future will those that are planted with some hardy vigorous stock like our Tallman Sweet, or Macmahon's White; and when these have formed a stock ahead at two or three years old they may be top grafted from selected

As the nurseryman practices propagation e exercises no discrimination, because his cuttings are from productive and productive trees alike, and more often than not they are taken from trees that have not come into bearing at all, consequently he must perpetuate a good many poor speci-The man who top grafts has an opportun-

ity to examine a thousand trees, and, selecting the best, can top graft his whole orchard with the confident expectation of having nearly all his trees approach very near in merit than one in the thousand that he selected for his grafting. One reason why top grafting cannot be

recommended to the average farmer indiscriminately is that he cannot be always induced to do the work at the proper time or in the proper time. He cannot always be trusted in the matter of selection, and he is too apt to be careless and indifferent, leaving the greater number of his trees ungrafted to the serious detriment of the symmetry of the orchard.

An Interesting Episode Connected With the St. Pierre Calamity.

[St. John Globe.] Letters from Martinique, published in New York papers recently gave an account not entirely accurate of the finding of some valuable articles in the ruins of St. Pierre cathedral by Capt. Henry de Bury, of the British army, who is stationed at St. Lucia. Capt. de Bury, in a letter to his father, Count de Bury, describes exactly what On May 13th I was in St. Pierre and went

all over the ruins, making notes and taking photographs. The town was still smoldering and almost red hot and nobody had been right in the centre of the town where cathedral was. I was the first to penetrate it is not difficult to persuade farmers that into the interior and went into the cathedral orchards can be made to pay; but every- to take a phote. When there I noticed something shining under some debris and on picking it up found it to be a gold chalice or ciborium. It was all crushed and broken, the lid was off it, and as I picked it up the host dropped out. The host was quite intact, but burned black. I did not care to touch the host, so I left it there. Lying beside the chalice was a round silver box and on the ground beside it a heap of wafers. These were quite intact and not even burnt. I decided to take the chalice | delivered ON CARS at Chatham Station and silver box and to restore them to the er BY SLED TO THEIR MILL priests in Fort de France. I knew that if I during winter, except to provide bedding for cattle. It lessons. Mr. A. McNeill, acting their left these things there they would soon be has been known for a long time that good fruit inspector, is engaged in this work, found by some of the people who were hoverpaper could be made of this material, but and this is how he teaches the young idea ing about for the express purpose of looting, for some reason it has not been utilized to how to grow fruit successfully, profitably, and would be stolen for the sake of the gold any extent. There are great possibilities and ready for sale. He arranges a and silver. Well, I returned to Fort de before Louisiana and Texas in the manu- meeting in a central locality and spends France, late that night, and early facture of paper from these two new from half an hour to an hour in-doors next morning I found an American man-o'-war, the Cincinnati, about to leave for St. Lucia. The captain offered me a passage across, which I accepted, as my leave expired that day and there was no other way of getting back except by hiring a boat and sailing across. So I had no opportunity in Fort de France of restoring the chalice, However, immediately on arriving at St, Lucia I reported the fact of having the chalice, etc., in my take another crop from the same ground. parts with the fo ce pump, taking care to possession to the officer commanding Canada is the great preserve of the demonstrate as well as to explain the dif- the troops, who is also the administrator,

they feel sore that an English officer should have been the means of restoring the things to the church and that none of them had enough grit to go and get the sacred vessels out of the cathedral themselves. Mr. McNeill found in his recent tour

Cardinal Vaughan's Letter to Roman

London, June 27. -Cardinal Vaughan, Archbishop of Westminster, has issued the following letter to the Roman Catholic

"The Finger of God has appeared in the midst of the national rejoicing and on the eve of what promised to be one of the most splendid pageants in English history. This is in order to call the thoughts of all men to Himself. The King's life is in danger; the danger being imminent. Let us have immediate recourse to divine mercy and by public prayer seek His Majesty's recovery. For this purpose let the rosary be recited publicly in every church in the diocese mmediately upon receipt of this circular. "I have learned from the papal envoy how earnestly the Holy Father desires the pres ervation of the King's life, and how cordially he would wish the prayers of the faithful to be offered for their sovereign's recovery.

Customs Frauds.

A Dawson, Yukon, special dated June 21, says : D. W. Davis, collector of customs, has been suspended owing to grave rregularities in the Customs Department. After suspension Davis handed in his resig nation. Alex. A. Cook of the same depart nent has also resigned. It is understood that Davis received a large sum of money from the Alaska Exploration Company and in return the Government was defrauded of a large amount of revenue due from the company. It is possible that criminal proeedings will be taken against officers of the company. Inspector McMichael discovered the frauds shortly after his arrival. E. S. Busby, formerly at Skaguay, has been temporarily appointed to fill the vacancy. The claim against the company with penalties, will reach \$50,000 or more. The evi dence secured by McMichael is said to be very clear and other charges may be made. Davis was formerly a Conservative member of Parliament for Alberta.

NERVOUS DYSPEPSIA

A Disease Very Common to the American People but Now Quickly Remedied.

A SURE CURE.

In a case of Nervous Dyspepsia a doctor ees two things, first, that the digestion is deranged, and second, that the nerves are in starved, irritable condition.

If abreast of the times, and in touch with the latest discoveries the doctor is sure advise Ferrozone, which is now universally prescribed in cases of acute Indigestion and

Ferrozone is prepared specially for diseases of the stomach and bowels, and as a sure cure for Nervous Dyspepsia, has proved itself a thousand times to be superior to all

Where Ferrozone is taken after each meal. it is impossible for Dyspepsia or Indigestion to exist. It digests the food before it has had ti ne to ferment in the stomach, and by its regular use one is enabled to eat and drick anything at any time, without fear of bad results.

Ferrozone relieves that distressing headche and burning feeling in the stomach peculiar to dyspepsia. It regulates the action of the bowels, kidneys and liver strengthens the nerves and makes the sad looking dejected dyspeptic feel like a new man in twenty-four hours.

The general manager of a Toronto Manufacturing Company who used Ferrozone with very marked results, says: "The strain of conducting a large business brought on a seige of Nervous Digestion about a year ago, which I endeavored in vain to shake off. Doctors told me only a complete rest would cure me, but not being able to spare the time, I used Ferrozone instead. It perfectly restored my good health in a short time. have confidence in the merits of Ferrozone, and am pleased to recommend it."

What Ferrozone can do for you can be best proven by giving it a trial. Every reliable druggist recommends and sells price 20c. a box, or three boxes for \$1.25. Sent to your address by mail if price is forwarded to N. C. Pelson & Co., Kingston,

CHARLES D. RUDDOCK.

32 Cal. High-PressureSmokeless IN MODEL 1893

WE are prepared to furnish our full line of Model '93 rifles, solid and take-down, for the new .32 Caliber HIGH PRESSURE SMOKELESS cartifies. This size was a 165 cartridge. This size uses a 165-grain buliet and has a velocity of over 2,000 feet per second, making it the most powerful cartridge made for an American arm, with the exception of the .30-40 U. S. Army, is is sufficiently deadly for any game known in North America.

Another great advantage is that Another great advantage is that the barre's are bored and rifled (but not chambered) exactly the same as the regular. 32-40 Marlin, one turn in 16 inches. This makes the use of black powder and lead bullets as black powder and lead bullets as satisfactory and convenient as in a regular black powder rifle.

This size is the first high-pressure arm developed in this country for a caliber larger than .30, and the first to use a slow enough twist to give best results with black powder ammunition.

Prices same as .30.30 MARLIN.
120-page cat log of rifles, shorguns, ammunition, etc.

guns, ammunition, etc., cover in 9 colors, mailed for three stamps
