Spectacles
The undenied advantages are claimed for Mackenzie's spectacles. It is that from the peculiar construction of the Glasses they Assist and Preserve the sight, rendering frequent changes unnecessary.
and—that they confer a brilliancy and distinctness of vision, with an amount of Ease and Comfort not hitherto enjoyed by spectacle wearers.
and—that the material from which the Lenses are ground is manufactured especially for optical purposes, by Dr. CHASE'S BAKROUX'S improved patent method, and is Pure, Hard and Brilliant and not liable to become scratched.
and—that the frames in which they are set, whether in Gold, Silver or Steel, are of the finest quality and finish, and guaranteed perfect in every respect.
The long evenings are here and you will want a pair of good glasses, so come to the Medical Hall and be properly fitted or on charge.

The GOGGIN HARDWARE STORE, CHATHAM
HOT FROM THE FRONT.
An Incident in the Life of Archibald Forbes.
News-gathering, not fighting, is the trade of the war correspondent. But it is news at any personal cost. and a fine unpromised heroism often goes with the gathering of it.
One morning after the siege of Paris when the city was believed in London to be still in the hands of the Commune, Sir John Robinson, manager of The Daily News of London, reached his office to find the late Archibald Forbes lying on the floor asleep, his head on a post-office directory, while the printers were hard at work on his manuscript. The story of "Paris in Flames," a most vivid description of the last days of the Commune.
"Forbes had telegraphed from Dover announcing his coming," said Sir John Robinson, "at the recent unveiling in St. Paul's Cathedral of a memorial to the famous war correspondent, the printers had been waiting, and thus the country heard of those terrible days for the first time."
"London was ablaze with excitement. Boulevard Street was impassable through the nervous shrieking for copies, and in Parliament Mr. Gladstone was questioned that afternoon and could only say he hoped the story was exaggerated."
"When Forbes' wakened from his slumber amid all this turmoil, what a spectacle he was! His face was white with powder, his eyes red and inflamed, his clothes matted with clay and dust; he was a dreadful picture. He had been compelled to assist the Communists in defending a triangular space upon which three detachments of the Versailles troops

were firing, and had actually taught the citizens how to build a barricade.
"By aid of dummy despatches, addressed to Lord Granville, and the Queen, Forbes escaped from this threatening triangle and wrote all the way to England, being the solitary passenger on the mail boat."
THINGS BETTER LEFT UNSAID.
Under the caption, "The Art of Putting Things," an English author has given some very amusing examples of saying things in a queer way. One of the most unfortunate recorded attempts to escape from a conversational difficulty was made by an East-end curate, who cultivated the friendship of mechanics.
"Oh, but that won't do at all," said the registrar. "Perhaps," said the curate, "you said you'd like to have it."
"How good of you to remember!" said the curate. "What a capital likeness! How is he?"
"Why, sir, don't you remember?" said the registrar. "He's dead."
"Oh, yes, of course I know that," replied the curate. "I mean how's the man that took the photograph?"
A story is told of a day laborer, who, on his way to his day's work, called at the registrar's office to register his father's death. When the official asked the date of the event, the man replied:
"He ain't dead yet, but he'll be dead before night, so I thought it would save me another journey if you would put it down now."
"Oh, but that won't do at all," said the registrar. "Perhaps," said the laborer, "your father will live till to-morrow."
"Well, I don't know, sir," the doctor says as he won't, and he knows what he has given him."

About the ...House

WHAT TO DO WITH PEACHES.
Peach Bavarian Cream—Ten fresh peaches, half pint of cold water, one pint of cream, half a box of gelatine. Cover the gelatine with cold water and let it soak for one hour. If canned peaches, one pint is used; if fresh, two. Pressed through a colander, but if fresh fruit is used it should be first stewed and sweetened. Place the gelatine in a small bowl and allow it to brown in the fruit, mix and turn into a large bowl; place this in a pan of cracked ice and beat until the peaches are thickened. Then add the whipped cream, stir carefully until well mixed; turn into a wet mold and set it in a cold place to stiffen. Turn out and garnish with whipped cream.
Peach Fritters—Either the fresh or canned peaches may be used. They should be cooked in deep fat, which should be hot enough to brown a small piece of bread in fifty seconds. Fresh or canned peaches, rum or brandy, sugar, grated lemon peel, and a dash of nutmeg. Sprinkle well with sugar, rum and grated lemon peel. Let them stand for ten minutes. To make the batter, take one heaping cupful of flour, two eggs, one tablespoonful of olive oil, one or two tablespoonfuls of rum or brandy, and a little cold water. The rum or brandy may be omitted if preferred. Beat the eggs, lemon juice, wine or fruit juice. Mix the yolks with the flour, then add the oil and liquor, thin with water to the consistency of thick cream. Add the white of the egg, beaten to a very stiff froth. Dip the fruit into this and fry in the hot lard. The batter should be thick enough to coat the fruit thoroughly. Cook the peaches piece by piece. When golden brown place on brown paper and keep them warm in the oven, and let them dry. Sift powdered sugar over them and serve.
Peach Mousse—Use very ripe fruit. Peel and slice enough to make a quart. Rub them through a strainer into a pint measure and heap the Add also two quarts of whipped cream. It is quite an improvement to add two tablespoonfuls of wine or brandy. Wet a three-quart mold in cold water and heap the mousse in lightly. Pack in salt and ice and let it remain for four hours.
Simple Peach Pudding—Line a deep glass dish with thick cream, mix a cake, soaked in sherry. Then fill the dish with fresh peaches, peeled and sliced and well sprinkled with sugar. Stand on the ice to become very cold before serving.
Peach Cream Pudding—One quart of pared and sliced peaches, three eggs, one pint milk, three-quarters of a cup of sugar, two tablespoonfuls of flour, saltspoonful of salt, generous half teaspoonful extract of vanilla. Heat the milk in a double boiler, beat the eggs, flour and salt well together. Pour a little of the hot milk into this mixture. When well blended return all to the double boiler and let it boil for ten minutes, stirring frequently. Remove it from the fire, strain into a bowl, add the vanilla and set away to cool. Place the peaches in a deep glass dish and which cream mixture becomes cold mix together and set it in the refrigerator for three hours or more to chill it thoroughly.
Peach and Cream Pie—A dozen large peaches, scant half cupful rice, two and a half cupfuls of milk, one cup of sugar, cup and a half of cold water, scant half a teaspoonful of salt, mix the rice and water for two and a half hours in the cold water; drain off the water and put the milk and rice in the double boiler and cook for two hours; then add the salt and cook for thirty minutes. Put the peaches in a wire basket and plunge them into boiling water for two minutes. Rub off the skins and cut the peaches in halves. Break six of the peach stones; put them in the saucepan with the sugar and water and simmer over for half an hour. Remove the stones and add the sugar and the syrup. Cook slowly for fifteen minutes. When the fruit is cooked spread half of the rice on a flat dish, having laid out the peaches in a layer half an inch thick. Save fifteen of the best halves of the peaches and spread four of the remaining pieces on the rice; put another layer of rice on top of the fruit, shaping it into a tapering mold. On the top layer put four more pieces of peach, and cover with the remaining rice, which should be heaped to a point. Arrange the pieces held in reserve around the base of the mold. To the sirup add the juice of an orange, and either one tablespoonful of marshmallows or a couple of tablespoonfuls of wine. Pour this sirup very carefully over the rice and peaches and also serve cream with the pudding.
Peach Marmalade—Place the peaches in a wire basket and plunge them into boiling water for two minutes. Rub off the skins, cut the peaches in halves and add the stones. Measure the fruit and place it in the preserving kettle. For six quarts of peaches use one quart of water. Cover and cook for an hour, then add three quarts of granulated sugar and cook for an hour longer, stirring often. The marmalade should be smooth, thick and rather glossy at the end of that time. Put in small jars or glasses. When cold cover with pieces of paper wet in brandy and then seal, or use metal covers.
FROM A WORN TABLECLOTH.
With many of us it is a domestic

PERSONAL POINTERS.

Notes of Interest About Some Prominent People.
Mr. Seddon kept for many years the first nugget of New Zealand gold which he unearthed in his digger days. When the Earl of Onslow was Governor of the Colony, in the early nineties, the ex-working-miner Premier had the tiny bit of yellow metal made into a breast-pin, which he wore to his lordship.
The Dowager Duchess of Abercorn, who celebrated her ninetieth birthday quite recently, can boast a record number of living descendants. The venerable lady had six sons and seven daughters, of whom five of the sons and five of the daughters are living to-day. The Dowager Duchess has no fewer than 140 descendants to-day. There are ten children, fifty-nine grandchildren, and seventy-one great-grandchildren.
Mrs. Moon, an ancient dame who lives at the Kentish village of Rolvenden, England, is believed to be the only subject of the King who was present at the battle of Waterloo. The old lady is the daughter of a soldier who fought in the battle, and as a tiny child of four accompanied Wellington's army on its march from Brussels. During the progress of the fighting she sat in a baggage-wagon drawn up, with many others, behind the British lines.
Sir Frederick Treves has certainly earned a generous reward for his skill. At little more than a moment's notice he placed his whole time at the King's service, and at least seven days and nights he never went to bed, snatching sleep at Buckingham Palace at odd moments. His daughter's wedding occurred during those critical days, and he was present when she drove herself to the Palace and put the case before her father that he took a hurried half-hour to attend the quiet ceremony.
Sir John Wolfe Barry, who assumed the additional name of Wolfe by royal license in 1898, is one of the most eminent civil engineers in the world. He has spent more than twenty years in building great works. His most famous achievements were the building of the Tower Bridge, the railway bridge at Blackfriars, the Barry Docks, and the New Bridges. Sir John holds a record as consulting engineer to no fewer than seven railways. He also acts in that capacity to the Corporation of London and many other important public and private bodies.
Mr. Edwin A. Abbey, the Academician, is an American by birth, and went to England when twenty-six years of age. It is not yet twelve years ago that his first oil painting was exhibited at the Academy, and already he has won recognition as one of the greatest living painters. Mr. Abbey has an enormous studio at Fairford, in Gloucestershire, England, and when not hard at work he is to be found practicing cricket on the lovely piece of ground in front of his house which he has had specially made. He is a great enthusiast of the game, and stands up to the bowling of his butler, who is a redoubtable cricketer.
The King of the Belgians is a redoubtable equestrian. One day, when walking in the country, he dropped into a wayside inn, where, surrounded by an admiring throng, a braggart farmer was offering to back himself for 200 francs to walk ten miles against anyone present. Perceiving himself unknown, the King took up the challenge, the couple agreed, and he was off with his stone and back. Off they went, and such good progress did the royal athlete make that he reached the half-way mark after a quarter of a day's ride. Then, depositing on the stone a 20fr. piece, as an indication that he relinquished the contest, he continued on his way at an increased pace and was soon lost in the distance.
A pretty story is told concerning Queen Helena of Italy. A little Neapolitan girl, named Ida Rizzi, some time ago was discovered by the possession of a photograph of the Queen which represented her in a somewhat thoughtful mood. The child, who had a considerable artistic talent, conceived the idea of copying the portrait and at the same time benefiting it with the addition of a smile. This she did very successfully and afterwards sent it to Queen Helena with these words at the foot: "May Her Majesty smile in this manner all her life." The young Queen was so delighted that in return she sent one of her ladies-in-waiting to Ida Rizzi's home with a large box of presents and a framed portrait of little Princess Yolande, together with a note of kindly greeting written by her own hand.

A CORONATION PRECEDENT.
It is necessary to go back more than six centuries to find a precedent for the coronation of an English monarch in the month of August, as the last occasion of the kind being the coronation of Edward I. and the Queen, Eleanor of Castile, on August 19th, 1274. Edward I. was in Palestine when Henry III. died, and the news of his father's demise reached him in Sicily; but, being aware that his succession would not be disputed, he hurriedly set on his intention to visit Italy and France on his way home, and, consequently, was not crowned until nearly two years after his proclamation as King of England. In Ireland, and Duke of Aquitaine, the coronation of George IV. was at first fixed for Lammas Day, August 1st, 1821, but was afterwards changed to July 19th.

Piles

To prove to you that Dr. Chase's Ointment is a certain cure for Piles, we have had it analyzed and every form of itching, bleeding and protruding piles, hemorrhoids, and all other ailments of the rectum cured by it. You can get it at any drug store, or by mail, and get your money back if it does not cure you. It is a sure cure, and you can get it at any drug store, or by mail, and get your money back if it does not cure you. It is a sure cure, and you can get it at any drug store, or by mail, and get your money back if it does not cure you.

REMARKABLE PHOTOGRAPHY.
One of the most charming happenings ever photographed by natural light, was that of a butterfly, fully developed, is poised on a leaf about to make the first trial of its wings. Mr. Enock notes that in seven minutes it emerged so quickly that its first flight was fully developed, and from the moment that the skin opened until the new-born beauty was poised on the empty shell it emerged so quickly that its first flight was fully developed, and from the moment that the skin opened until the new-born beauty was poised on the empty shell it emerged so quickly that its first flight was fully developed.

LATE HOURS THE RULE.
In St. Petersburg late hours are the rule. The principal streets are generally crowded at one o'clock in the morning. Many of the theatres do not open before midnight.
Chimer—So you're not friends any more. Rimer—No, he doesn't know what true friendship means. I asked him once to give me his candid opinion about some verses I had written. Chimer—Well? Rimer—Well, the chump gave me.

FOR EXCURSIONISTS.
A court has decided that a passenger cannot travel by an excursion train and then pay the excess fare to a station beyond. The judge held that an excursionist is not entitled to continue his journey beyond the station to which the ticket related without paying the full ordinary fare for the whole journey.
AN INHABITED MINE.
There is a quicksilver mine in Peru 175 fathoms in circumference and 450 feet deep. In this profound abyss are streets, squares, and a chapel where religious worship is held.

A GREAT ART.

The Rare Ability to Select Efficient Executive Heads.
Many men mistakenly think that because they work hard and try hard they must eventually succeed to some extent. This does not follow. Some men carry on great enterprises with little apparent effort. Their success is due to skill in selecting efficient executive heads.
Many a business man breaks down trying to supplement the work of incompetent heads of departments simply because he does not know how to choose the right men. A man of commanding ability does not worry himself over details. He makes out what he can carry it out to the letter. Indeed it is a sign of weakness for the head of a concern to bother about little details. It shows that he lacks the insight, the business sagacity, the ability to select an efficient man who can do things efficiently.
Many heads of large concerns spend little time in their offices. They travel or remain at home, but the business goes on like clockwork simply because they know how to select men who can efficiently do the work assigned to them.
It is a great art to duplicate oneself in another and multiply oneself many times by selecting those who are vastly superior to ourselves, but who do not happen to have had our opportunity to do the thing themselves.

A Careful Old Lady.
An old lady applied at a registry office for a maid.
"I want a little girl, between eight and twenty-two years of age, who is fond of mushrooms."
"Fond of mushrooms?" inquired the agent. "That is something I never inquire about from my applicants. I don't understand."
"Well, I am very fond of mushrooms myself, and there are so many mistakes made. The idea came to me several years ago, and it was a dispensation of Providence that it did or I should have been killed. I make my maid eat a portion of all mushrooms brought to my house before any are served to me. I always require it," replied the old lady. "I have lost two excellent maids from toothaches during the last five years, and, of course, I could not think of taking the risk of eating mushrooms unless I had a maid to test them."—London Globe.

Marjory's Prevalence.
Baby Marjory has been having her first experience of rural sights and sounds, of green things growing, of flowers hiding in the grass, of cows in the pasture, of horses in the stable. She was delighted with all but one of the things, as a writer in the Philadelphia Telegraph.
The one exception was the big, surly dog that keeps watch and ward over the farm. She respected Hector in his own place, but that place is at a distance. She did not want him or his kind to approach near enough for intimate acquaintance by riding.
Having been invited by a lady of the house to take a walk down to the village, Marjory hesitated a little. "Why, Marjory," exclaimed the lady, in an injured tone of voice, "don't you want to go with me?"
"Yes, but a little maid, 'I was to go, but please don't let any dogs happen to me!"

Oldest Inn in England.
In the village of Norto St. Philip is the George Inn. It claims to be the oldest licensed village alehouse in England, the license dating from 1397. Its appearance is eminently picturesque, each story overhanging that beneath, while the front is broken by bay windows, a porch and a flight of stone steps leading to a doorway in the wall. At the back are more quaint doors and windows, a turret built against the wall and inclosing an outside stair, while in the yard still remains a portion of the old gallery which in the middle ages was found in so many hostelries. Most of the front is timbered. Each gate is surmounted by a curious chimney. A curious feature of the interior is the upper floor, which is of plaster.

The Girl and Her Play.
Once upon a time there were a young lady and young gentleman playing a card game. The lady's hand was "I offer you a solitary diamond," said the young man as he played the ace of that suit.
"The best I can do is to give you my heart," the young woman answered as she played.
"Then your whole hand goes with it," he said.
"Yes, Charles, dear," she replied.
"Moral—There is such a thing as playing into the other player's hand."

Roman Command.
The ancient Greeks and Romans drank wine freely at their feasts. Wine was their beverage. Indeed Bacchus held high carnival among them, and the Roman would gorge himself with food and then empty his stomach by artificial means and resume his seat at table and eat and drink to his fill again.
"Fact is," said the one man, "I married because I was lonely as much as for any other reason. To put it tersely, married for sympathy."
"Well," said the other man, "you have mine."

THE USUAL KIND.
"Nold—What do you mean by saying that my baby is just an ordinary baby?"
"Toh—Why, he is precocious and beautiful and the best that ever lived, isn't he?"—Life.

GIANT TREES NEAR LONDON.
There are still to be found, even within the sound of Bow bells, some trees remarkable enough, both for height and girth, to deserve a visit, says the London Globe. Churchyards are good places to look for large trees besides the funeral way. The ivy is not strictly speaking a tree, but it is hard to apply any other designation to the venerable plant whose foliage mantles Old Chingford Church. Its trunk has become a veritable timber, and it can scarcely be younger than the fabric to which it clings. If we go further afield numerous instances may be recalled of giant trees—gigantic, that is to say, for their respective regions. It is to be feared that they are doomed to perish when they grow in the outskirts of large towns.
"AN ANCIENT PEA."
At a show organized in London by the Sweet Pea Society a plant was in bloom which had been raised from a pea found in the hand of an Egyptian mummy.
France has about 4,000 acres of sweet peas, and Italy 2,500 on an average.

MASHONAS AND MARBLES.
So far as work is concerned, the laziness of the Mashona is proverbial. But anything in the nature of play he enters into with zest. For some time the natives in and around Salisbury, Rhodesia, shocked the civilized inhabitants by riding in a semi-nude state, bicycles along the public streets. The novelty of cycling, however, appears to have worn off. Their latest game is a game in which the small white boys in that part of the Colony. Exception to so innocent an amusement could not be taken if the dusky players acquire the playthings honestly. To gratify their new taste they are purloining and destroying scores of patent bottles containing lemonade and soda water in order to obtain the glass marbles therein.

CARBONIC ACID GAS IN AIR.
A committee of the Paris Academy of Science has just reported on an experimental determination of the amount of carbonic acid gas in the atmosphere. Air subjected to the action of alkali or baryta gives up about 30 litres of the gas per 100 cubic metres of air. If, however, it is continuously passed, for a long time, through quicksilver and exposed to contact with the alkali or baryta, it is found that a second supply of carbonic acid gas can be collected, varying in amount from 4 to 30 litres per 100 cubic metres of air. It can only be produced by the transformation of some volatile carbon compound present in air. Further experiments now being made are needed to decide what compound it is that is so transformed.

FOR EXCURSIONISTS.
A court has decided that a passenger cannot travel by an excursion train and then pay the excess fare to a station beyond. The judge held that an excursionist is not entitled to continue his journey beyond the station to which the ticket related without paying the full ordinary fare for the whole journey.
AN INHABITED MINE.
There is a quicksilver mine in Peru 175 fathoms in circumference and 450 feet deep. In this profound abyss are streets, squares, and a chapel where religious worship is held.
