Heavy Fire Loss at Shediac.

The Webster Boot and Shoe Factory at Shediac was totally destroyed and the Weldon House damaged to some extent by fire early on Tuesday morning.

Always Reliable.

We can always depend upon KENDRICK'S LIMENT. It is always the same.

Obituary.

M. J. writing from Chatham on 5th inst. to the New Freeman says:—The many friends and former pupils of St. Michael's Academy will be sorry to hear of the death of Reverend Sister Cecile, which occurred at the Hotel Den, at an early hour on Monday morning.

Personal.

Hon. L. J. Tweedie, Premier and Hon. Wm. Pagsley, Attorney General of New Brunswick were in Ottawa on Monday.

Blackville.

The first annual meeting of the Blackville Cheese & Butter Co. was held on Friday evening last and was fairly attended.

To Cure a Cold in One Day.

Take Laxative Bromo Quinine Tablets. All druggists refund the money if it fails to cure. E. W. Grove's signature is on each box. 25c.

The Driver.

The lumber drives in the smaller streams may be said to have all come out, the driving conditions, so far being excellent, with continued good prospects.

Masonic.

A party of Chatham and Newcastle members of the Masonic fraternity were in the city yesterday on Masonic business.

Cold Settles in the Back.

hits people in a tender spot and makes it hard to brace up. Nervine will take that kind out of your spinal column in half an hour. Nervine, that's why relief is so soon. Nervine penetrates, that's why it cures. Five times stronger than any other remedy. Nervine cures all lame back, lumbago, sciatica and neuralgia. Nervine is king over all muscular pain, has no equal and costs 25c. per bottle.

Forsyth at the services in S. Paul's and St. Mary's on Whit Sunday, the 22nd inst. Mr. Robinson is now in the Rural Deanery of Shediac and will be in Richibucto on Sunday next.

Ordinary Corn Salves Contain Acids But the old reliable Putnam's Corn Extractor is entirely vegetable in composition and does not eat or burn the flesh. It gradually lifts the corn, causes no pain, and cures permanently. Price 25c. at all druggists. Use only "Putnam's."

NEWS AND NOTES.

A wreck of a passenger train in the Grand Central canyon of the Colorado on Sunday last. left 3,000 Methodists on their way to the general conference at Los Angeles at a place where there was neither food or water. They worked all day Sunday with the railroad men helping build a temporary track.

W. F. McCreary, M. P. of Selkirk, Manitoba, was found dead in his bed room at the Russell House, Ottawa, on Wednesday evening 4th inst. He died from heart failure, and had been dead twelve hours when discovered. Mr. McCreary was 49 years old, a barrister, and native of Ontario. His home was at Winnipeg.

G. R. Joushian, the new mechanical superintendent of the I. C. R. G. has authority over all government railways as mechanical superintendent, and not merely the industrial superintendent. This puts the industrial department of P. E. I. railway under general supervision of Montreal.—Globe Star.

Vancouver, May 5.—Sam Collins and his Ohio friends who have put a \$60,000 dredge on the Fraser river at Lillooet are getting \$2,000 a day and expect soon to make \$4,000 from the bed of Gold stream. It is estimated that within five years one hundred dredges will be at work on different streams in the province, and the dredging output alone will be ten million dollars. The gold ground is unlimited. The Indians have tested the gravel to a depth of forty-six feet without reaching bed rock. It is equally rich all the way down.

The British House of Commons on Wednesday, by a vote of 197 to 124, rejected a resolution in favor of the repeal of the Irish crime act. The speaker of the House of Commons on Wednesday, the 5th inst., said that the repeal of the crime act would do harm by reviving the agitator's passion now laid at rest. Mr. John Redmond expressed his extreme dissatisfaction with Secretary Wyndham's statement, which he declared, would lead the Irish people, if they had the means, into open rebellion.

Princess Royal Island Mines. [St. John Telegraph, May 3] The interview with Fred. M. Tweedie, the superintendent of the Princess Royal gold mines, which was published yesterday in a Vancouver paper, attracted a good deal of attention, both by reason of the unusual richness of the ore, and of the mine being owned by New Brunswickers. The fact that one of our New Brunswick boys is managing the property so successfully all undoubtedly increases the interest which the public take in this mining venture.

In order to get further information regarding the property, a Telegraph reporter called last evening upon Hon. Wm. Pagsley, the president of the company, and was informed that the directors were greatly pleased at the energy and good judgment which Mr. Tweedie had shown in operating the mine. He had taken charge at the very worst season of the year, in December last, when the days were getting very short in the northern latitude in which the mines are situated, and when the conditions were most unfavorable. Nevertheless, he had carried on the work of development very successfully through the entire winter.

Mr. Tweedie's statement in the Vancouver paper, as to the richness of the ore as exported, said Mr. Pagsley, is quite within the mark. The ore shipments so far have averaged upwards of \$100 per ton, and when it is borne in mind that the ore in many of the most successful mines does not yield more than \$15 per ton, it will be seen that Mr. Tweedie's estimate of the great value of the company's property has a very good basis to rest upon. The veins do not seem to be patchy, as is frequently the case, but the mining experts declare that they have been exposed at different places for a distance of more than 6,000 feet and are remarkably continuous. An important fact is that the experts declare the veins to be true fissure veins.

The mine is situated on Princess Royal Island, which is on the west coast of British Columbia, about 400 miles north of Vancouver city. It is sixty-five miles long by about thirty in width. It is mountainous and is well timbered. There is no settlement on the island, except that of the company's mining camp. The company is contemplating the installation of a mining plant shortly, to be operated by electricity. There is excellent water power, produced by the water of a large lake which rushes through a gorge with a fall of the water twenty feet. The lake from which the water flows is only about 150 yards from the foot of the fall, thus affording the opportunity for developing a fine power at a small expense.

Mr. Pagsley was asked if he intended visiting the mine shortly, as Mr. Tweedie had indicated, and replied that he was very desirous of doing so and was endeavoring to make arrangements to go west either this month or next, though he was not at present certain of being able to get away.

An Important Case. An important case, with a large amount of money involved was before Judge Barker in the equity court, St. John, Thursday morning. The title is The Consolidated Trust Company of New York, vs. The Mineral Products Company and Barton E. Kingman of New York and, by amendment, The Electro Manganese Company of this province.

The Mineral Products Company was incorporated by the laws of New York state some years ago and established a manganese business in King's, Albert and Westmorland counties. The company purchased some properties and secured leases from land owners in Albert county and in connection with their purchases issued bonds to the extent of about \$80,000 or \$100,000.

These bonds were taken by the Consolidated Trust Company and a trust mortgage was executed by the Mineral Products Company to secure the bonds. The Mineral

The Granger Condition Powders advertisement with image of a horse.

Products Company had also acquired mining leases from the crown. Nearly three years ago Frederick Sayles, of Providence (R.I.) who had advanced large sums to the Mineral Products Company amounting to about \$180,000 assigned his claim to Barton E. Kingman of New York, and Mr. Kingman brought suit against the Mineral Products Company and obtained judgment for \$187,000 in this province. Under the judgment, executions were issued in Albert, Westmorland and Kings counties and the personal property of the Mineral Products Company was sold, and purchased by Mr. Kingman in part satisfaction of his judgment.

Mr. Kingman among other things purchased a lot of manganese amounting to some \$3,000 or \$4,000 worth and also the rights of the Mineral Products Company in the crown leases. He later assigned all his interests and leases to the Electro-Manganese Company recently incorporated in this province.

Now the Continental Trust Company has filed a bill in equity for the purpose of foreclosing the trust mortgage and while there is no dispute on the part of the defendant that they are entitled to have the mortgage foreclosed, the real dispute arises as to the personal property, which defendant claims is not covered by the mortgage and that the ore now lying at the works in Hillsboro belonged to the defendant Kingman and since his assignment to the Electro-Manganese Company, and are not covered by the mortgage.

Haze & Raymond appear for the Continental Trust Company. Hon. L. J. Tweedie for Barton E. Kingman and Hon. Wm. Pagsley and A. P. Barnhill for the Electro-Manganese Company.

Profitable Egg Production. DEPARTMENT OF AGRICULTURE, COMMISSIONER'S BRANCH, OTTAWA, MAY 5, 1904.

PULLETS FOR WINTER LAYING. THE FRESH EGG TRADE. EXPORTING EGGS. For all farmers a most profitable branch of the poultry business is the production of eggs during the winter, says Mr. F. C. Hare, Chief of the poultry Division, Ottawa. Every winter there is a great demand for new-laid eggs; the supply is always limited, and high prices are paid. In the large cities strictly fresh eggs sold readily during the winter at from forty to sixty cents per dozen. Some farmers are so situated that they can maintain a city trade in fresh eggs throughout the year. A premium of several cents a dozen can usually be obtained for new-laid eggs shipped weekly to the city merchant.

MARKET REQUIREMENTS. There is a growing preference on the home markets for brown-shelled eggs. The shells of the eggs should be wiped clean if necessary, and the eggs graded in size. For shipment to the merchant they should be packed in cases holding 12 dozens or 30 dozens each. Eggs to be palatable should be eaten in a strictly fresh condition; therefore they should reach the consumer without unnecessary delay. This requires (1) that the eggs be collected regularly every day and stored in a cool room (temperature 40 to 50 deg. F.), until a sufficient number are on hand to deliver to a dealer; (2) that the dealer forward the eggs to the merchant at least once a week; and (3) that the merchant protect the eggs from deterioration while in his possession.

PULLETS FOR WINTER LAYING. As a general rule pullets hatched during May or early June will prove most profitable for winter laying. Farmers who expect to make a specialty of high-priced new-laid eggs next winter should at the present time be hatching out a good number of chicks from which to select suitable pullets. The cockerels should be sold in the early fall. Unless they are housed in the fields and require little attention or extra feed, the most profitable age for marketing is four months. After that age the cost of feed per pound of gain in live weight rapidly increases.

The pullets should be comfortably and permanently housed in the fall; transferring mature pullets to a strange pen defers egg-production. Early winter laying demands liberal feeding, which includes in addition to grain, waste meat or animal food, and vegetable food. From two flocks of Barred Plymouth Rock pullets that were liberally fed from birth for early maturity at the Bonville, Que., Illustration Station, eggs were gathered daily after the pullets were four months and one week old. Experiments at the Utah Experiment Station showed that the profit from young hens or pullets was about five times greater than that from hens three to four years old. Not only did the old hens lay considerably fewer eggs, but the eggs were worth less per dozen. This is accounted for by the fact that the pullets laid a larger proportion of their eggs in winter, when the price was good.

BREEDING FOR WINTER LAYING. When the pullets are forced for winter egg production, there should be kept in addition another breeding pen of selected fowls from which to rear the chicks. A hen or pullet that commences to lay in the spring will at that time produce stronger-germ eggs for hatching than will another that has had her vitality impaired by winter laying.

The farmer should select from the flock of pullets ten or twelve of the best winter layers, placing a regular leg band or a piece of wire around the leg of each. The next winter these pullets, (then yearling hens) should be separated from the laying hens and kept in good health and medium flesh but not fat for winter laying. In February or March they should be mated with a suitable cockerel, and their ration increased so as to bring them into laying at the time when their eggs are required for hatching. Such a
