NOTHING TO GIVE.

BY GEO. A. R. DONELSON. I'll tell you a short story, 'tis simple and true, Of a saying some have-in fact not a few-Who when asked by a beggar to relieve their distress, Will give them an answer you'll easily guess. You may go to the young, you may go to the old, You may go to the wealthy, who roll in their gold ; To give some poor creature to help them to live, They will surlily answer they have "Nothing to Give !" For the good of the Heathen-who live far away-Contented and happy, who need no such aid, While the moncy that's sent them could better be ma To feed the poor hundreds that stop at our door, For a morsel to keep them from starving, no more. When asked for a dollar the Heathen to aid, Why let the donation be cheerfully made; If the money's to spare after other claims come, And you've done all that's needed for missions at home Missions that daily you'll happen to meet Wearily treading the pitiless street, Pleading with eye, and with tongue, and with hand, For the scant "bread of life" in a plentiful land.

In the homes where you happen, yourselves, to belong. Dont send all abroad-those at home must needs live And when asked for a trifle, have Soemthing to give.

Till you've settled some claims, out of fashion, but

Believe that the savages, happy and free,

Will do very well if you'll just let them be;

Select Tale.

-Mr. Isham Baggs, a gentleman whose name has been intimately connected with the progress of electrical science, has recently invented an instrument whereby the slowness of the operation of working the electric telegraph signals will be removed. At present, although a signal, is rapidly pressed forward by the electric current, a difficulty lies in the slowness with which the signals are formed, and thus it is at the signal station that the de-Nelly gasped out a husky, wailing, "Av," and lay arises, as only a certain number of words can be formed in a given time. The instrument invented by Mr. Baggs substitutes steam power for the ordinary manual labor in framing the signals, and great saving of time, and also of expense, will be the effect, as a greater number of messages of great length can be despatched, and, there-"Can you spare me a hundred dollars, Edward? fore a less charge in the price will be more remuon a message, which is to be-as it were-set up Telegraph will add immensly to the value of that face-but she waved him off, and balancing her "A hundred dollars," said she to herself. At length one of them more bold than the est ventured to introduce the subject as the Receiver-General was walking the deck, and approaching him asked if he was on a government contract. "Yes!" was the groff repy. "A very large one?"
"Yes-very large." "May I ask what it is?""Yes." "Well, pray sir, what is it?" "Why, you see," said the Receiver-General, with great seriousness, "the Queen of England has made a present to the King of her half of Lake Ontario, and I am engaged to bottle it off!" No more questions were asked.

A REMARKABLE CASE. - A correspondent of the Albany Evening Journal gives the the particulars ty, N. Y., who is known in that region as "the woman that lives without eating." The woman, "Your providing is not to buy," continued the would not see him-if she did, it was all over with to almost continuous spasms of great violence, and from the description given, of the most heart-rend ing character to witness. The writer says:

> "She has had long continued spells of raising her body up, then throwing herself back so as to strike the top of her head apon the bed-thus bringing her feet and face so near together as to form a semi-circle with her body. Sometimes her head has been drawn back so that the line of her face would be reversed and would rest upon the pillow. Then she would straighten out again, and there would be the most forcible agitation of her whole frame-a violent quiver-a rapid spasmodic action of every nerve and musle, with strangling and gasping for breath, like a person in the last agonies of death. This strangling and gasping is in consequence of suspended respiration during the period her head is so forcibly drawn back. At one time she remained in that position twenty minutes ;twelve minutes were the longest while I was with her. I applied a looking glass to her face as a test,
