onr entire productions, to be \$2,442,916 nothing is something that has not yet been worth of flour and meal; and the trade and satisfactorily shown. navigation returns for 1877 places us in about the same position. However, I believe we are designed to be a wheat producing country when the great North West is fully developed. Mr. B. appears to be startled at the idea that these are new channels of industry : most of the industries that have revolutionized trade are of recent date. The manufacture of cotton is hardly 140 years old; the great railroad system that has changed the carrying trade of the world, almost had its birth, within memory of men still living; the electric telegraph, steam navigation, commercial developments, mechanical improvements, and scientific discoveries, prove conclusively,

that we have got to keep on top of this wave of human progress or it will roll over us. The statement of the Minister of Customs, The Garleton Sentinel in his report for '76, shows that the falling off in the imports of cotton and woolen goods (largely caused by home production) very materially effected the custom receipts, which proves conclusively that the energy of the commercial classes makes the change in our directly opposite Post Office, up stairs. fiscal policy indispensable. And as a proof of our manufacturing prosperity, we submit facturers are being ruined. It appears that and be "political dolts," because in the year 1875, Canada manufactured agricultural implements, boots, shoes, brooms only don't agree with his conclusions nails, tacks, brads, springs, rope, twine, sadles: and when we remember that the major part of these maunfactures has sprung up in favourably known in this county, stated over their own signature, that they had con-Vienna, and Moscow, to supply them with principle, protection is argued for, then agricultural implements, exclusively of their make, for five years; this firm had heretofore the maunfacturing establishments of Small & Fisher, Connell Bros., Robert Smith, Drys-
