20,590 lin. feet main pipe, 12 inches interior diameter, at \$1.70 per foot, \$35,003 00 Digging trench, packing pipe and covering in 20,590 lin. feet of main pipe, at 15 cts. per foot,

Total for main pipe, \$41,271 50 10,560 lin. feet distributing pipe of 6 inches interior diameter, at \$1.15

Digging trench, packing and covering in 10,560 lin. feet distributing pipe, at 10 cts. per foot, 5 six much stop gates, at \$30 each, 14 fire hydrants, at \$60 each, 14 domestic hydrants, at \$17 each, Branch pipes to hydrants, 200 service cocks, at \$1 each,

The above estimate is sufficient to lay and complete the main, and lay and complete two ever, that the Canadian Pacific Company some means taken a dose of aconite which she miles distributing pipe.

it could be manufactured here, thus giving circulation at home to a large sum of money that otherwise would be sent away for iron

lay their own service pipes.

drought, or accident to the main pipe.

water would be pumped from the river or creek into a reservoir. The probable cost of ine, vary very much from the amount given above. Each system has its special advantages, but we suppose that a supply received direct from a natural source is the most reli able and in the end much the cheapest; the cost of maintenance and running must be much less than by the other systems.

We have then as cost of supply, in round numbers, as estimated above An annual interest at 6 per cent., Now on the other side of the account let us take actual saving and probable revenue.

It now costs say \$900 a year to keep in orwould be incidental to the new system.

on cost, the property owners at large would | will be looked for with interest.
