Regular meeting of the Woodstock W. C. T. U., every Thursday, at 8 o'clock, p. m., in Parlors over Coffee Room. Ladies generally are cordially invited.

Is Beer Intoxicating?

If you drink beer, you can feel it go to the head, unless your brains are so soaked with it that you cannot feel anything correctly.

If you do not drink it, you can feel its effects upon others, and know that it is intoxicating, even better than those who drink it, because you are wide awake and have all your senses about you.

We know that beer must be intoxicating, because it contains alcohol. We can get alcohol from it by heating it, and collecting the steam as the distillers do. When the distillers separate alcohol from wheat, they call it brandy. When from beer they call it gin.

We know gin to be very intoxicating. Beer is only less so because it contains less alcohol. The amount of alcohol in Philadelphia lager is nearly four per cent., or four parts in one hundred. In Burton pale ale, it is eight per cent. In old English ale, it is ten per cent. But no rule can be relied on. In fact, you can get it as strong as you choose to make it.

You say that this is very true, four or eight or ten parts in one hundred. True, but the drinkers take enough more to make it up, say from ten to fifty glasses a day, and some even more. Now, there are ten glasses of beer in a gallon, and it has five per cent. alcohol, it is equal to four-fifths of a pint of whiskey—a pretty heavy dose. It is enough to do a deal of mischief and it does it.

Here is an item just in: "The other evening four young fellows went to a saloon in South Boston, drank two or three rounds of liquor, quarreled about paying for it, broke one another's heads, and a pretty good deal of glass, and got into the station-house in less than one hour."

Would this have happened if beer had not been intoxicating?

Look at the police reports of those arrested for disorderly conduct, and in a great number of cases you will find it was because of beer. In the family it makes a bad day, and some even more. Now, there are ten glasses of beer in a gallon, and it has five per cent. alcohol, it is equal to four-fifths of a pint of whiskey—a pretty heavy dose.
