

Liver Pills

That's what you need; something to cure your biliousness, and regulate your bowels. You need Ayer's Pills. Vegetable; gently laxative.

Want your moustache or beard a beautiful brown or rich black? Use **BUCKINGHAM'S DYE**

TO CONSUMPTIVES.

The undersigned having been restored to health by simple means, after suffering for several years with a severe lung affection, and that dread disease Consumption, is anxious to make known to his fellow sufferers the means of cure. To those who desire it, he will cheerfully send (free of charge) a copy of the prescription used, which they will find a sure cure for Consumption, Asthma, Catarrh, Bronchitis and all throat and lung troubles. He hopes all sufferers will try his remedy, as it is invaluable. Those desiring the prescription, which will cost them nothing, and may prove a blessing, will please address: **DR. EDWARD A. WILSON**, Brooklyn, New York, 15-11.

For Sale.

IN famous Aroostook River Valley, Farm of 120 acres—100 under plow—fronts on river, westerly slope, 13 miles from Carleton Place; well watered, some wood, cuts 30 tons hay this year; barn, finished and painted, 40x70, with 2 story basement, house, finished throughout, 12 story, 16x20, ell 15x30 and shed 15x30; spring water in house and barn. Reason for sale, other business. A pleasant home and profitable farm. Terms \$1500.00 down and balance on time. For price and other questions address:

Damp pastures or low lands are not conducive to the health of sheep, as they prefer upland and a great variety of pastures. It is known that the quality of the food and pasture has more influence on the wool than does climate. Fat sheep produce heavier and closer fleeces than do those that are poorer in flesh. That the food is an important factor in affecting the quality of wool is shown by the fact that when fine wool sheep have been taken from the east to the west the fineness is not always retained, although the sheep will gradually become larger and the fleeces heavier.

A Woman's Tribute to Dr. Chase's Remedies

Showing how these great family medicines win the confidence of the people, and establish themselves in the homes.

Mrs. JOHN WORELL, 335 Victoria Street, London, Ont., states: "For years I suffered a great deal with catarrh in the head. I tried everything I could hear of for it, but it remained for Dr. Chase's Catarrh Cure to cure me. Though entirely freed from catarrh, I was left in a nervous and run down condition and then began using Dr. Chase's Nerve Food, which has built up my system, strengthened my nerves and made me strong and well. We have also used Dr. Chase's Syrup of Linseed and Turpentine in our family for coughs and colds, and never knew it to fail to cure these ailments."

Mrs. Worell's family medicines have proven their right to a place in every home, and have come to be considered indispensable. To protect you against imitations the portrait and signature of Dr. A. W. Chase, the famous receipt book author, are on every box of his remedies.

The trans-Siberian railway is now open for international postal traffic. Letters forwarded by this route from Central Europe to Northern or Central China, Korea or Japan, will be three or four weeks in transit.

General News Items.

Women are eligible for seats in the parliament of the Commonwealth of Australia.

The old Prince of Wales theatre in Tottenham Court Road, London, is being razed to the ground. The present frontage of the theatre dates from 1780. Concerts, to which George III. went, and gatherings of the Pickwick Society were held in the old hall, and very many years ago it was the home of French plays and more recently the Salvation Army.

A Nagging Cough drives sleep and comfort away. You can conquer it with Allen's Lung Balsam, which relieves hard breathing, pain in the chest and irritation of the throat. Give it freely to the children.

An experiment made by a Michigan grower of apples shows that if apples are packed in kiln-dried, clean sand and the apples not allowed to touch they may be put into bins and kept for months, provided the bins are in a cool, dry place, and the apples not bruised. Success has been also obtained by the use of well-dried corn and oats, especially in keeping beets, turnips and potatoes.

From the Kingston Post Office Comes word that Mr. James McGuire is again at work. He was laid up by corns in the soles of his feet, but was perfectly cured by Putnam's Painless Corn and Wart Extractor.

The cows which give large yields of milk are not such as might be classed among the "easy keepers." Cows will often eat 75 pounds of green food in a day, as well as a ration of hay and grain. They have good appetites, and are often expensive, so far as consuming food is concerned, but, on the other side, they convert the large amounts of food into milk and butter, giving larger profits than cows that eat much less, and which also produce smaller quantities of milk.

Minard's Liniment cures Garget in Cows.

An American lady visited Stratford-on-Avon lately, and "gushed" even above the usual high-water mark of American fervor. She had not recovered from the attack when she reached the railway station for she remarked to a friend as they walked on to the platform: "And to think that it was from this very platform the immortal bard would depart whenever he journeyed to London!"

Finland formerly belong to Sweden and is still closely related to that country in language and customs. It was conquered by Russia about a hundred years ago. The recent changes in the government of the grand-duchy, to bring it more into unity with the rest of the Russian empire, though they may have seemed to us wholly a matter of local concern, are viewed with alarm in Northern Europe as possible a step towards the conquest of the whole of Scandinavia. Russia is supposed to be still eager as ever for winter ports on the Atlantic.

A Great Little Worker. During a long life time the heart will propel half a million tons of blood through the body, and so long as the blood is in a healthy condition it will repair itself as fast as it wastes, patiently keeping up the play of its valves and the rhythm of its throbs. If the action of the heart gets weak, irregular and fluttering, the blood is lacking in nourishing qualities and requires just such assistance as is best supplied by Dr. Chase's Nerve Food, the great blood builder and nerve restorative.

The desert regions of the United States west of the Mississippi are to be reclaimed by irrigation. This opens up, it is said, a new era of prosperity for sixteen states and territories of the neighboring republic. The arid and semi-arid zones includes about one third of the area of the United States, and it is estimated that there may be water enough available under the storage system to irrigate about one sixteenth of this area.

ARE WE DOING THE BEST POSSIBLE WITH OUR FARMS?

At the Farmers' Institute meeting held at Carlingford, Victoria Co., on the 13th inst., an interesting address was given by D. Drummond, the well known Yorkshire breeder, formerly of Petite Cote, Que., which covered matters of vital importance to St. John Valley farmers.

The meeting was held in the school house, George Brown presided, and there was a large and attentive audience. The first speaker was Mr. Drummond who, on rising, said that he had not come to deliver an address, but to discuss with the farmers present the problems they were trying to solve and he wanted them all to take a part in the discussion.

Are we, he said, doing the best that we possibly can with our farms? Who has reached the limit? Some men are reeling as much as \$400 worth of produce each year per acre and they will not say that they cannot do better.

If then we are not doing as much as we can is it not worth our while to try a little harder and see what we can do. The farm statistics of the province of New Brunswick show that last year there were about 300,000 acres in the province under the following crops:

Crops	Acres	bus. to the acre.
Oats	171,993	yielding 30.8
Wheat	22,092	do 20.0
Barley	4,253	do 25.2
Buckwheat	6,022	do 23.8
Potatoes	35,353	do 116.9
Turnips	5,356	do 480.8

Is it not our duty to ourselves and to the country to increase this yield per acre? How shall we begin? There are two main factors under our control, which go to make better crops, viz., better cultivation, and better rotation of crops.

CULTIVATION.

Making the soil fine, what does this do? It gives the seed the mechanical condition necessary to its growth, it makes the plant food in the soil available to the small rootlets of the young plant and it conserves the moisture in the soil for

BABY'S OWN SOAP

used by particular people both young and old. Keeps the skin soft, clear and white.

No other Soap is just as Good. 25c. A. BERT TOILET SOAP CO., INC., MONTREAL.

the use of the plant during the dry periods that may occur.

During the winter and spring a great deal of water falls on the land and much of it soaks in. What happens when warm, dry weather comes? Why, this moisture rises to the surface and is evaporated by the sun and wind. It comes to the surface through small pores in the soil in the same way in which the oil in a lamp wick goes up to the flame—by capillary attraction—as a result we see during a drought like we had last spring that our land will dry out away down 5 or 6 inches. The evaporation of the soil moisture can be largely prevented by early cultivation of the land. Stirring the surface soil say 2 or 3 inches deep, will break up the pores through which the water is coming to the surface and it will be held down by the loose soil on top.

Harrow all your land just as early in the spring as the land will carry the team. As the season advances keep all the hoed crops thoroughly cultivated. In grain crops it is a good plan to harrow after rolling and again after the grain is a few inches high. All this cultivation not only conserves moisture, but it also kills the sprouting weeds and helps the crop in both ways. Grain of course cannot be harrowed when clover and grass seeds are sown among it.

ROTATION.

Making one crop help the next one—There is no crop so valuable in a rotation as clover. Always sow clover, it is the best agent that we have for adding humus—vegetable matter—to the soil and it will at the same time add nitrogen, the most costly manurial constituent. A number of experiments have shown this power of clover. In some tests recently made, the crop of wheat sown after clover weighed 3196 lbs., on the same area after grass, the crop weighed 2300 lbs. With mixed grains, after clover, the weight was 2256 lbs., after grass only 1078 lbs.

Ten bushels to the acre of an increase in the grain yield upon clover over grass sod was a safe estimate when other conditions were equal and it proved that the clover crop was the most important one in any rotation.

The better selection of seed was also an important point in securing better crops. In experience gained in the McDonald-Robertson Seed Grain competitions it had been proved that, by sowing seed that had been selected from the best heads for four years, an increase of 10 bushels per acre could be gained in the general crop of the farm.

Mr. Drummond strongly commended to his hearers' attention these points of better cultivation, better rotation, better seed selection, if they would increase their crop yields.

Question—What do you think of planting small potatoes? Mr. Drummond—it may do very well for one or two years but continued it will end in smaller crops. The best way to select seed potatoes is to go through the field when the plants are growing and mark the most vigorous hills and at digging time save the potatoes from those hills, which give the best yield of smooth even tubers.

Question—Could clover seed be grown in this country?

Mr. Drummond—I do not know whether it would be a profitable business or not. Special machinery is needed for threshing it. The first crop in the season does not carry much seed. In Ontario the first crop is cut for hay about the 15th of June and the seed crop cut in August. Here you might grow it by pasturing into June, or cutting then, and then taking the next growth for seed. The early blossoms, I presume, are not well fertilized because the bumble bees and other insects are not plentiful in the early part of the season.

Question—How much clover seed do you sow to the acre?

Mr. Drummond—Ten pounds of the best seed I can buy.

MARKETING THE CROP.

The best way to market most of our farm crops, said Mr. Drummond, is to feed them to live stock and convert them into more concentrated products. To do this profitably we must have good stock, artificially improved for the purpose to which we want to put it.

Better stock than we are now keeping will add to our profits. The first step is the selection of good animals to breed from. Do not sell the best lambs, the best heifers, the best pigs and keep the culls for breeding. Keep the best and then give them suitable feed and the best of care. The animal that will eat the most is usually the most profitable. In two cows that I know of, one last year consumed \$46.87 worth of food, her milk cost 46c. per 100 lbs. and she made a profit of \$56.14; the other ate \$33.81 worth of food, her milk cost 93c. per 100 lbs. and she only gave a profit of \$3.42.

We must remember that our improved stock is artificial and requires artificial treatment. It is of

SHYLOCK

Shylock was the man who wanted a pound of human flesh. There are many Shylocks now, the convalescent, the consumptive, the sickly child, the pale young woman, all want human flesh and they can get it—take Scott's Emulsion.

Scott's Emulsion is flesh and blood, bone and muscle. It feeds the nerves, strengthens the digestive organs and they feed the whole body.

For nearly thirty years Scott's Emulsion has been the great giver of human flesh.

We will send you a couple of ounces free.

SCOTT & BOWNE, Chemists,
Toronto, Ontario.

no use to buy good bulls and other stock and then let them run down on our hands, they can't improve their progeny under such treatment. Feeding and intelligent care must go with good breeding else our live stock cannot be profitable.

W. W. Hubbard spoke briefly on the market demands for horses, cattle and poultry. He urged the breeding of heavy horses, they were better adapted to farm work, easier to train, and always ready for market. On the other hand the carriage horse must have a special training before he would sell at a good price, he was more liable to blemishes and he could not be put at the work of the farm without more or less spoiling his style.

Another product to which some attention could be well given was fattened poultry, there was a quick market for good poultry at good prices both in St. John and Montreal. It must be fattened however to sell well and there was no reason why some of our farmers' wives and children should not buy chickens from their neighbors to put with their own and crate fatten them for a few weeks and make them fit for any market.

J. C. Manzer, Andover, spoke of the Agricultural advance of Victoria Co., and the need of the extension of business to catch the markets, Victoria Co. he said would grow potatoes equally well as Aroostook Co., and if we had the West Indian market made available by proper steamship connection a large business could be done. Seven years ago Victoria Co. had only raised enough farm produce to partially supply the market in the lumber woods near by, last year in addition to supplying a much larger amount to the lumbermen, the county had shipped out by rail, 70,000 bushels of oats, 2,000 tons of hay, 2,000 lambs, 1,000 head of cattle, 3,000 barrels of potatoes, 50,000 pounds of cheese, 50,000 pounds of butter and 30,000 pounds of pork, worth in the aggregate about \$80,000. This progress was slow, but it was encouraging and he believed that if our farmers would in certain districts work together in the production of certain products a much more rapid advance could be made. Let one district make a specialty of making milk and support the creamery, another district could go more largely into beef, the pork business could be made a specialty, and when we got a large market for potatoes we could do well by making a special crop of them.

He thought a special commercial agent should be sent to the West Indies to investigate trade openings and then that action should be taken to get rapid communication out of St. John.

Geo. E. Baxter, Secretary of the Institute, explained the objects of the organization and asked for the support of the farmers in the district to it. He strongly urged the growing of more apples and advised the people of Carlingford to apply for the establishment there of one of the proposed model orchards to be planted and cared for under the Department of Agriculture.

He also spoke of the value of fattening chickens and said that he would pay 61 cents per lb. live weight for all the chickens that were brought to him. The crate fattening of chickens was something that anyone who would give the subject close attention could do.
