A Good Baker

The oven in the Kitchener Range is scientifically proportioned to the size of the fire-box so that no more fuel can be burned than is absolutely necessary to heat the oven.

The oven is lined with heavy sheet steel, which is a great radiator of heat and insures a uniform heat throughout the oven—no danger of a loaf of bread being half done on one side and burned on the other.

The Kitchener range is built on scientific principles throughout, and should be carefully examined before buying any other.

Sold by all enterprising dealers.
