THE TRANS-CANADA HIGHWAY

We note once more a move is on foot to have the trans-Canada highway follow the north shore and the Matapedia valley, instead of the Saint John river valley as at present. We doubt if the movement will achieve any greater results than did similar agitations in the past, but it will be well for town and county councils and other interested bodies to be on the lookout for developments.

The present route was chosen for several good reasons. It furnishes a shorter road to the Central provinces than does the northern one, and is so much more easily accessible to American traffic through the State of Maine. It traverses some of the most beautiful scenery in the world, including the Saint John River Valley. It runs through the capital and the metropolis of the province, Fredericton and Saint John, neither of which cities are within about 100 miles of the northern highway. Also a considerable amount of permanent roadway has been laid in the last two years on the No. 2 route.

It should be pointed out that the northern road does not touch any city of New Brunswick except Moncton, and Moncton is also on the present route. There seems absolutely no valid reason why the routing should be changed, and many reasons why it should not.

CONGRATULATIONS IN ORDER

Once more congratulations are in order to Mr. and Mrs. D. A. Lindsay and Ronald Page, Woodstock Garrison Club members who made such a fine showing at the Maritime Tournament at Sydney. Mrs. Lindsay, in particular, ran away with the whole show, cleaning up about everything but the men's singles, and perhaps it is as well for the champion in that class that she could not enter for the event. Mr. Lindsay paired with his wife to win the mixed doubles. In this class they had an easy victory. Mr. and Mrs. Lindsay have established a reputation as one of the strongest doubles teams in Eastern Canada, and it is quite apparent from the results this year and last that no other pair in the Maritimes are capable of taking their measure.

Ronald Page was also successful in defending the junior singles title he won at Sydney last year.

The Woodstock players are receiving congratulations not only from fellow club members but from the citizens as a whole.

It was hoped that the Maritime tournament would be played at Woodstock next year, but the idea was abandoned as the Halifax players felt the trip was too long, and Saint John was chosen instead.

A BIG UPSET

A stunning surprise was sprung at the winter Olympic games, when the English hockey team defeated the Canadians, thereby securing for themselves the Olympic title. Apparently the Canadians were much the stronger team, skating and checking the English team pretty much into the ice. They neglected one important detail, however, viz., the securing of as many goals as their opponents got.

Even more amazing than the Canadian loss is the fact that the Canadian team displayed a fairly good brand of sportsmanship, and the English team emphatically did not. Perhaps the importation of Canadian hockey players into England has also resulted in the importation of the endless feuds and wrangles which mark amateur hockey, so called, today.

At any rate the English team were strong enough to make a showing only because the Canadians interceded in their behalf, rightly or wrongly, and obtained permission for them to use certain players who were not eligible. The English rewarded them by sticking to every technicality that could be raised, especially the voting for a system that allowed a team to reach the finals and forbade it to play when it got there, because the other finalist had previously beaten it. Obviously the Canadian team should either have been out of the running when defeated by England, or should still have been allowed to remain in. Apparently the other teams wanted the Canadians there as a drawing card, but did not want to give them a chance to redeem their previous defeat.

Unfortunately the Olympic games have always been productive of endless disputes and dissatisfaction. This is not the first time that weird rulings have been invoked against Canadian Olympic hockey teams, but in previous years the Canadian teams have always been strong enough to overcome all opposition, either on the ice or off it.

We wonder what President Gilroy's thoughts were when he saw his team defeated by the English. Perhaps he wished he had the despised Halifax Wolverines over there. The Wolves would have succeeded in poking a few goals past Foster, unless he is a much better goaltender than he was when he played for Moncton.

AUSTRALIA COUNTRY GREAT POTENTIAL MINERAL WEALTH

Australia is a country of great potential mineral wealth, although at the present time the agricultural and pastoral industries exceed it in value of output. Australia's greatest mineral wealth is coal of which it is estimated there are reserves of 147,635,000,000 tons, according to the Industrial Department of the Canadian National Railways. If ever a successful process is developed for the economical production of oil and gasoline from coal, and it would seem this is not so very far away judging by experimental results obtained in Great Britain the wealth of these coal deposits would be enormous. Next in order come lead and silver lead, gold, iron, zinc, tin and copper. The amount of gold produced in Australia since its discovery in that country in coal up to the latest figures available, totals roughly, \$3,234,151,140.

ARGENTINA GETS CODFISH FROM NORWAY AND SCOTLAND

Argentina gets approximately 75 per cent of her dried codfish from Norway, the remaining 25 per cent being furnished by Scotland. The cod supplied by Scotland is mainly flage, a dry salt fish prepared split with fins and tail but without bones, outer skin,

'SALADA' TEA

is delicious

or head, and arrives in hermetically sealed tin boxes of about 90 pounds in weight, averaging 36 inches in length and 11 inches at the widest point, packed in individual wooden cases. That from Norway is principally codfish of uniform size approximately 24 inches in length and 15 inches in width. Canadian codfish is practically unknown, no commercial shipments being recorded during recent years, according to the Industrial Department of the Canadian National Railways. The consumption of codfish in Argentina is on the increase, according to latest figures, and Iceland has recently entered the market.

COMMUNITY STUDY CLUB

(Continued from page 1)
is food, clothing and shelter. Money as we know it has no real value unless we can use it to put some body to work, to produce real wealth for us.

Gold has a certain value as a commodity, but gold as money should have no power except in service to real wealth and labor. What we know, has given it power over our industries and treating it as real wealth is proof that something is wrong with our thinking. If capitalism is to endure it must be made to fit the conditions of the times. The frame work that grew up in a past era is no longer sufficient. When we work and try to make improvements in our present system we are not trying to injure any class or institutions, but in reality we are only saving them from disaster of their own making that will overtake them sometime.

The potential wealth of the world

is almost past computation. The wealth already developed is immense and still men dwell in poverty. The trouble is not transportation or production; we can transport and produce enough for all, the only system that has failed is the money system. Money, what is it? Let us look back over the ages and see what we can learn of it. There was money of some kind even before the time of Christ, but apparently it was not coinage, it was certain weights of gold or silver paper money as we know it, only dates back about forty years.

There seems to be no doubt that barter and trade was the beginning of trade. Then different articles began to be used as tokens of value, such as sharks teeth, shells and bits of metal and ivory. These would be given to show so many units of labor had been received or so many units worth of goods had been received. By this system man was able to exchange his kind of labor for other kinds of labor. Their money brought about a fair exchange of goods, and that is what our money should do today. Money should be a tool of trade no matter what it is made of, a yard stick of value between producer and consumer of commodities and services. A man who saved the receipts for his labor had just that amount of claims on goods and services. He had power over commodities that that amount or in other words that was his purchasing power. This purchasing power in the hand of the people makes a demand for greater production, for the needs of man as a whole has never been satisfied and the things he thinks he needs are many times greater. So purchasing power is what he needs to make the

wheels of industries move.

In the primitive community what use would the shell, wood bark, metal or sharks teeth have been to any body if he could not have traded them for labor or the products of labor. It is the same in our day, money is of no use only as a medium of exchange; making it convenient where buyer and seller do not meet. When it is not a medium of exchange its usefulness and value are finished. Under our system we have allowed money to take the place of real wealth. We have made it a master instead of a utility. Money is a utility, it is very much like the wheel. The wheel as a utility has contributed more to civilization than money. The wheel circulates, so does money if it is working. The wheel moves goods physically, money moves goods by manual arrangements. In our transportation system we do not put the chief value on the wheel. The goods moved are of a great deal more important. So the importance of money is that it carries goods from one person to another; or one place to another and because of its intrinsic value in itself. Even gold held in awe as it is, contributes nothing of importance to life except as a medium of exchange.

After considerable debate, in which practically all the members took part, the meeting was adjourned until the following Thursday.

VERDICT IS CUT

(Continued from page one.)
per cent contributory negligence, their verdict being for \$9,000. This verdict was carried to the Appeal Court of New Brunswick, which ordered a re-assessment of damages. The case was tried again in the Carleton Circuit, the jury this time raising the verdict to \$9,560. An appeal was again taken by the defence, and again a new assessment of damages was ordered.

From this decision the plaintiff appealed to the Supreme Court of Canada, who assessed the damages themselves, ordering a reduction from \$9,560 to \$6,336. P. J. Hughes, K. C., of Fredericton, appeared for the plaintiff, and W. P. Jones, K. C., of Woodstock for the hydro electric district.

ANTI DIPHTHERIA

(Continued from page one)
tection afforded in most cases lasts several years.

Infants up to 6 months of age are usually immune to diphtheria and do not catch it. However in the ages from 6 months up to school age, over half the deaths from diphtheria occur. Thus it is very important that children from 6 months of age up be protected by toxoid, in fact from 6 months to 1 year is the best time for the inoculations.

Consent slips are sent to parents of school children to be signed, and the inoculations are given only to those children for whom consent has been received. Parents are requested and are strongly advised to bring to the clinic their children who are too young to attend school but are over 6 months of age.

Children who have had three inoculations of toxoid previously will not be given a further course, unless specially requested by the parents. Free toxoid clinics under the supervision of the District Medical Health Officer, Dr. A. M. Clarke, will be held at the school houses at the following places in Carleton and Victoria Counties, during the regular school hours.

Plaster Rock, February 25th; Grand Falls (Flats), February 27; Grand Falls, (Convent) Feb. 28; Perth, March 3, (morning); Andover, March 3, (afternoon); Aroostook Junction, March 5; Woodstock (Fisher Memorial), March 10; Woodstock (Broadway), March 11; Hartland, March 12.

The dates for the second inoculations will be announced later, but in most instances, the interval between the first and second clinic will be exactly 3 weeks.

BASKETBALL PLAY-DOWNS

Saint John, N. B., Feb. 17—W. E. Stirling, secretary of the New Brunswick Basketball Association, to-night released the draw in all divisions for the playoffs.

All winners must be declared by March 31st, according to the released schedule.

According to the release, Moncton and Saint John teams alone compete in the midget class, in the juvenile class, Moncton, Saint John and McAdam have entries. Saint John, Woodstock, Chatham and Moncton are grouped in the junior class, the first two and last two.

The intermediate class brings together McAdam and Woodstock, Chatham and Newcastle, Moncton and Mount Allison, with Saint John drawing a bye.

In the senior class, Mount Allison draws a bye and Woodstock and Saint John Trojans battle it out for the right to meet them. No Fredericton or University of New Brunswick team is grouped in any class.

In the senior class the Maritime playdowns are scheduled to get under way on April 6th when New Brunswick and Nova Scotia clash.

12.15 Sunday School & Bible Class.
7 p. m. Worship.
Rev. S. J. MacArthur, M. A. B. D., will preach morning and evening.
Wed. 7.30 p. m. Prayer Meeting.

ST. LUKE'S CHURCH

Sunday, Feb. 23,
8 Holy Communion
10 Sunday School
11 Mattins
7 Evensong. The Junior Choir will be

in charge of the Musical part of the service.

PLAY TO BE REPEATED

The Play, "A Soldier of The Cross", which was so well presented by the United Baptist young people last Tuesday, is, because of many requests, to be repeated next Monday evening, Feb. 24, at 7.45. A silver offering will be taken.
Should the weather next Monday be very unfavorable the play will not be put on.

GOVERNMENT WILL BE

(Continued from page one)
the Woodstock Town Council, and several other interested bodies. Upriver members of the delegation arrived in Woodstock last night, and with the town representatives went on to Fredericton this morning. Delegates from here included Mayor K. L. Everett, representing the town, and Dr. N. P. Grant, F. O. Creighton, G. C. Campbell and E. R. Jones, representing the Board of Trade. The delegation met in the town hall last evening to discuss a course of action for today.

The delegation has a carefully prepared case, based on a great volume of data, which some of the members have been accumulating over a period of years. Resolutions approving the securing of a survey have been passed during the last few weeks by a number of organizations, many of which are also being represented at Fredericton today.
