Peculiarities of Russian Winters.

There is one curious thing about a Russian winter. In the latter part of October or the first of November the weather will be as mild as it is here in September. Not a sign can be seen of an approaching change, when suddenly, without any apparent warning, a light haze will be seen in the northern sky, and in twenty-four hours the thermometer may fall 50 degrees. The change is so sudden and violent that travellers are frequently frozen to death before they can gain shelter. It has occurred that farmers looking after their flocks have been caught in one of these blizzards, and, missing their way home, have lost their lives, their bodies remaining under the snow until the following Spring. The suddenness of a Dakota blizzard is well known in the northwestern part of the country but it is tardiness personified when compared with the rapidity with which a Russian Winter storm comes on.

Fame is a plant of slow growth, and often stunted by too much care.

THE HOUSE AND HOME.

SUNDRY AIDS TO CONVERT THE FORMER INTO THE LATTER.

Why Your Bodice Sits Awry—A Thing That is a Mystery to Most Women is Here Explained—Some Excellent Helps for Kitchen Work.

"Wait till I get to planning houses, mamma, dear; I'm going to have the most beautiful kitchens in them!" "Dear; but I could live in one of them, dear; but it has always been my lot to have such a terrible gloomy, ugly, inconvenient kitchen."

I think if I was building, I'd build the kitchen first, and if I had anything left for the rest of the house I'd put it up; if not, I'd get along without it, for I get so little time to even sit down in the pretty part of the house.

TOWEL RACK.

While I was at Chatham this summer I saw such a nice convenience for drying the dishes instead of wiping them.

Washed nicely and stacked in this drawer, and sealing water poured over them, you can let them sit till the next meal, and they will be shinier and brighter than the cleanest towel will make them.

We made ourselves the happy possessor of one, and since then the midget, who always had to wipe the dishes as her share of work, has been detailed for a more congenial job.

DISH DRAINER.

The everlasting dish problem hasn't been entirely settled for the girls yet; but this certainly settles the biggest half.

Don't persist in thinking the only way is the way of fifty years ago; simplify your work as much as possible, for there is enough of it to do in any house without nursing part of it to keep it longer.

Very many steps can be saved by condensing things into smaller spaces. To have things in reaching distance saves a great many steps, and every housekeeper should study to do that in all her work.

The miles of ground the house mother goes over in the performance of her daily tasks will never be known, and only she herself finds it out when health and strength are gone.

With an arrangement like our illustration, which any one could have hung

DISH DRAINER.

above or beside the table, many minutes could be saved, and if the work can be accomplished with greater despatch, that much more time could be taken for rest.

Towels of various sorts are very necessary in the kitchen.

A large paddle, like our illustration, with hooks all along the handle, hung in a convenient place, would always be a ready receiver for towels and aprons.

KITCHEN CUPBOARD.

Ah, if we can make our kitchens any more attractive, let us do so, for so many of us have to spend a great deal of our time there.—Louise Long Christie, in Farm and Fireside.

How the Tomato was Named:

Few persons know the origin of this common name. It originated in this way: The earlier experimenters with the fruit believed that it had a great effect on the spleen—that is to say, it made persons liable to crossness good natured—gave them, so to speak, a lovely disposition, and for this reason the plant was known to the ancient Spaniards as the Love Apple. By the name of Love Apple it is still known in many English-speaking countries. The word tomato is derived from the same source, that is to say, from the original Latin word amo, to love, although we use it now as a Spanish derivative, tomato being a Spanish expression.—Mechan's Monthly.

Happy Homes.

A woman may do her level best to make a happy home for her husband and children, but if she is treated as a slave and only given her board and clothing in payment for her services as mother, wife, cook, laundress, nurse girl, chambermaid and seamstress, it is any wonder that little or no happiness exists in that home? If a mother spoils her son by pampering and waiting on him all the years of his childhood and boyhood, and making him think that a man should always be waited on by the woman of his household, it is strange that he expects a wife to do the same, and that, in all likelihood, she either wears out in a few years from such service, or else becomes bitter and disheartened? There are very many reasons why a home may not be a happy one and the happiness found therein depends fully as much on the

husband as it does upon the wife. We are often told that in every true and ideal marriage both husband and wife must learn to lose and to forgo. In every home where happiness exists, there must be perfect trust, confidence and love between the husband and wife. There are two kinds of sunshine in the world, and both quite necessary—the one which is caused by the sun's shining outdoors, and the other by its shining in our hearts. Happy homes abound in the heart sunshine, and whether it shines without or not, there is naught but bright cheer, hopeful words, and the kindly thoughtfulness, that each member of the family shows towards the others that makes an ideal, happy home—a perfect heaven on earth. How many of us do our share in making such a home that shall be a heaven of rest to all who may come within its influence?

WHY YOUR BODICE SITS AWRY.

A Thing That is a Mystery to Most Women is Here Explained.

Said one woman to another, anent her new gown: "It must be bewitched. I cut and fitted it myself by a pattern that is just perfect, and see, the back seam crawls towards my left hip, and the side forms are apparently trying to climb to my armpits. I assure you I am quite desperate over such manifestations of textile total depravity. From the looks, anybody would say I cut the thing out on Friday."

"You did worse," said the other, eying the garment critically. "You cut each piece so the threads run the wrong way."

"What difference does it make how they run?"

"All the difference betwixt a perfect fit and the thing of wrinkles and puckers you have on. Let me tell you a secret I learned from a London dressmaker. In cutting out a bodice always snapp each part so that the woof threads will go as straight around your waist as the bell tape does. That puts

THE WAY TO CUT IT.

the warp perpendicular and gives almost a perfect bias on the seams in the back. Look at your back forms. You cut them, did you not, out of any piece that was big enough? In each the threads run differently, and all ways but the right one.

"Then in fitting you gave no thought to symmetry or proportion. Like these dress-makers, in fine, you took in your seams in any way that promised to make a smooth, tight fit. In consequence your back forms are hardly an inch wide in the armpole. In a well-cut bodice they are as wide there as at the waist line. The swell of bust and shoulders is accommodated by the back and front figures.

"When stuff is cut on the cross you should be careful to have a true bias around the waist and up the fronts and the back seams. Another thing, if you want your gown to sit smooth over the shoulder, before basting it up stretch each front piece

THE WAY NOT TO CUT IT.

as much as you can half way from the neck to the armpole, and hold the back full to it for the same distance. Never mind the apparent pucker. Pressing will banish it and give you an easy seam that will hug the curve of the shoulder almost as a man's coat does."

"I see," said the other. "Tell me, did you learn that, too, from the London cutter?" The other nodded yes, adding, after a minute: "And she spoke as one having authority, for she was forewoman at Eliza's, and enjoyed the privilege of sticking pins in the Princess of Wales and half the duchesses in the kingdom. In fitting an armpole, if it needed taking in, she either set the forms higher on the back or changed all of them, bottom as well as top. And you could not have bribed or coerced or bullied her into putting the fronts to hem, as you have done. Instead, she curved the edge to your figure, and finished it with the neatest of facings, with a fly for hooks or buttons. She kept me standing, slowly turning, like a hairdresser's dummy, three dreadful hours, but in return I got a gown as easy as if it had grown on me, to say nothing of the wisdom that has been oozing out for your benefit these last ten minutes."

Household Suggestions.

Light is bad for canned fruit.

Never put pickles in a jar that has had lard in it.

Instead of swallowing nostrums observe hygienic rules.

Never leave vegetables in the water after they are cooked.

An oyster shell in the tea-kettle will prevent the formation of crust on the inside.

To keep salt dry for table use, mix one teaspoonful of corn starch with one cupful of salt.

Equal parts of sweet oil and vinegar and a little gum arabic make an excellent furniture polish.

Rubbed with a woolen rag saturated with kerosene, a tin kettle or coffee pot becomes as bright as new.

A gargle of salt and water before retiring at night will strengthen the throat and keep off bronchial attacks.

Powdered flint glass ground to an impalpable powder and mixed with the white of an egg makes one of the strongest cements known.

A skillful cook may not be made by a book, but almost anybody can make a good pudding by observing carefully a few simple rules.

Thick sweet cream sweetened and flavored and thickened with a little flour or corn-starch and baked between two crusts is excellent.

Galvanized iron pails for drinking water should not be used. The zinc coating is readily operated on by the water, forming a poisonous oxide of zinc.

Beware of that common practice of dipping the comb in water when arranging the hair. It promotes a decomposition and rancidity of the natural oil, and so leads to "rotting."

Ribbons and other silks should be put away for preservation in brown paper, as the chloride of lime used in the manufacturing of white paper frequently produces discoloration.

Roasts that should be juicy come to the table as dry as pasteboard because the oven was not hot enough at first to instantly harden the outer surface and prevent the escape of its juices.
