The New Idea.

Are you bright and clever? If so, you have plenty of ideas of your own, also sense enough to grasp good new ones when offered. What do you think of a 32 column Illustrated Monthly Paper, each issue containing a piece of Music, Vocal or Instrumental, Latest Fashions, Good Stories, Dramatic News and Portraits of Pretty Actresses, Household, Toilet and Fancy Work Hints, all for 25 cents a year, postpaid? Seems too good to be true, but we give you exactly what we advertise. Send 25 cents and see for yourself.

THE NEW IDEA CO.,
1441 Broadway, New York City.
Agents wanted. Liberal commission paid.

NEW YORK MUSICAL ECHO.

The handsomest musical and fashion journal in America, full sheet music size, 32 pages and handsome cover, containing from ten to twelve pieces of vocal or instrumental music, besides four or five portraits of leading actresses. Subscription \$65.00 per month and expenses, and money deposited in any bank when started. For particulars, write
THE NEW YORK MUSICAL ECHO CO.,
Broadway Theatre building, New York
Agents wanted. Liberal commission paid.

WANTED HELP.

RELIABLE MEN in every locality (local or traveling) to introduce a new discovery and keep our show cards tacked up on trees, fences and bridges throughout town and country, ready employment. Commission on salary \$65.00 per month and expenses, and money deposited in any bank when started. For particulars, write
THE WORLD MEDICAL ELECTRIC CO.,
London, Ont., Canada.

LIFE INSURANCE AT COST.

The Mutual Reserve Fund Life Association of New York issues life policies at about half the old line rates, and returns to the policy holders at the end of ten years the earnings of their share of the reserve which makes it the cheapest life insurance in the world, considering the security offered. The company has a reserve fund of \$3,700,000 and have paid to deceased policy holders upwards of \$19,000,000. Lieut. Col. James Domville, 134 Prince Wm. Street, St. John, is manager for the Maritime Provinces. James T. Kirke, Special Traveling Agent for N. B.
P. S.—Some desirable territory for Agents may yet be secured.

PERFECT MANHOOD!

How attained—how restored—how preserved. Ordinary works on Physiology will not tell you; the doctors can't or won't; but all the same you wish to know. Your **SEXUAL POWERS** are the Key to Life and its reproduction. Our book lays bare the truth. Every man who would regain sexual vigor lost through folly, or develop members weak by nature or wasted by disease, should write for our sealed book, "Perfect Manhood." No charge. Address (in confidence),
ERIE MEDICAL CO., Buffalo, N. Y.

Notice.

All persons are requested not to lead, drive or tie their horses on the sidewalks, and also to remove all rubbish off the street in front of their respective places, or it will be done at their expense as the law directs.
MARTIN FLANAGAN,
Richibucto, April 25. Com.

DOUBLE CONSCIOUSNESS.

A Rare Case Reported by a London Physician.

At a recent meeting of the Clinical Society a distinguished suburban practitioner showed a girl, 12 years of age, who exhibited in the most complete form the condition known as "dual existence," or "double consciousness."

Last year, after a severe illness, which was diagnosed to be meningitis, she became subject to temporary attacks of unconsciousness, on awakening from which she appeared in an entirely different character. In her normal condition she could read and write and speak fluently and with comparative correctness. In the altered mental condition following the attack she loses all memory of ordinary events, though she can recall things that have taken place during previous attacks. So complete is this alteration of memory that at first she was unable to remember even her own name or to identify herself or her parents. By patient training in the abnormal condition she has been enabled to give things their names, though she still preserves a baby fashion of pronouncing.

She sometimes remains in the abnormal condition for days together, and the change to her real self takes place suddenly, without exciting surprise or dismay, and she forthwith resumes possession of her memory for events of her ordinary life, to the exclusion of those which have transpired during the abnormal state. During the last month or so she appears to have entered on a new phase, for, after a mental blank of a fortnight's duration, she awakened completely oblivious to all that had happened since June, 1895, and she alludes to events that took place just anterior to that date as though they were of quite recent occurrence; in fact, she is living mentally in July, 1895.

These cases, though rare, are, of course, not infrequently met with, and they have been carefully studied, especially in France. The hypothesis that finds most favor is that the two halves of the brain do not work in unison; in other words, that there has been some interference with the connections which, in the ordinary normal being, make of a wonderfully composite organ like the brain one organic whole. Sometimes one part of the brain and sometimes the other takes possession of the field of physical activity, and, as each part works to the exclusion of the other, we get the Dr. Jekyll and Mr. Hyde transformation. —London Medical Press.

Testimony of the Photograph.

"It is remarkable that an important part the kodak plays in maritime transactions, as well as others, these days," observed Capt. Tanvers, an old whaler. "You may not know it, but no big ship ever leaves port now without a kodak and a supply of photographic materials. This is especially the case with whalers and other ships who go out on long cruises. The day of listening to yarns of whalers has passed. To-day the whaler must show the photograph for everything."
"As a whale is worth from \$3,000 to \$5,000 and as it costs from \$25,000 to \$75,000 to send out and maintain a whaler and her crew for her catch, yarns, interesting as they may be, are not regarded by the men who furnish the money for the enterprise as a sufficient remuneration. They want the facts; or photo of them if they lost the facts; nothing else will do. It won't do any more for a party to go off on a loading cruise and return in nine or ten months, empty, after having eaten up several carloads of provisions and run up the wage bill into the higher thousands. Every place the ship touches has to be photographed, and a photographic transcript has to be shown of every important incident of the cruise." —Washington Star.

A Good Business Cow.

Professor J. W. Robertson says: "A cow with the business habit of keeping her accounts with the world paid up, through the man who owns and feeds her, is a good business cow. That is the kind of cow I recommend. Her power of service will be indicated by certain external points. She should have a large, long udder, of elastic, fine quality, a mellow, movable skin, covered with soft silky hair; a long, large barrel, hooped with flat ribs, broad and wide apart; a broad loin, spreading out into broad, long hind quarters; an open twist, with rather thin hips, and a lean neck of symmetrical length, carrying a clean-cut, fine face with prominent eyes. A cow with these points has ability to serve a man well, if she gets a fair chance. That her calves may have powers equal to, or better than her own, care should be exercised in their breeding. The best blood of the breed adapted to the farmer's purpose should be used to enlarge, and not to lessen, the working capacity to be transmitted to her calves."

Playing the Banjo by Electricity.

An electric banjo has appeared in Boston. The instrument has electromagnets so fitted as to press on the frets when energized, and a plucking arrangement acts on the strings. These actions are controlled by a moving strip of paper run by an electric motor through guideways of a contact maker, the paper being previously stamped out in dots and dashes corresponding to the tune. —New York Telegram.

A Notable College.

Lewiston, Maine, is one of the most thriving manufacturing cities in New England, and Bates College, of which Lewiston is the seat, is one of the most useful of New England's smaller colleges, having graduated a notable number of men and women who have gone on into the work of teaching.

HYDROPHOBIA CURE.

Rabbits and Guinea-Pigs Ruthless! Secret—How Would a Depew or a Platt Feel?

Two rabbits and a guinea-pig are waiting at the Pastour Institute to see whether they will go mad. If they do, then it is certain that a big, black mongrel dog that bit a dozen boys last Wednesday was mad also. And it will remain to be seen whether the twelve victims display any signs of hydrophobia. The two rabbits and the guinea-pig were inoculated with what was supposed to be poisonous matter from the stomach of the dog that did the biting. The stomach of the dog was taken to the Institute for this purpose.

The animal had been shot at twice and hit both times, and that, too, by a policeman, whose name was Mr. R. P. H. and it deserves remark and remembrance. It is the practice at the Pastour Institute to inoculate rabbits, guinea-pigs and other innocent animals with the serum or blood of a supposed mad dog after he has bitten a person under examination to determine whether or not the patient's system has been tainted with the poison of rabies.

It is a very satisfactory method for Dr. Giber and his helpers, and also, no doubt, never stopped to consider its effect from the point of view of the rabbits and the guinea-pigs and the other creatures who thus involuntarily lend themselves to the cause of science.

Rabbits and guinea-pigs are inoffensive animals. It is said of a guinea-pig that of all members of the animal kingdom, he is the least likely to assert himself in a hostile manner, even under the greatest

INOCULATED WITH A MAD DOG'S POISON.

As a consequence, the creature would have been exterminated long ago were it not for his extraordinary fecundity.

Instances have been found in which a single guinea pig has been the direct lineal ancestor of more than four hundred offspring and their descendants during the brief period of his life.

The animal is of the rodent or rat order, and his native place is in any one of the Gulanas, on the northern coast of South America.

It is interesting to reflect on what the feelings of these harmless creatures are after they have become inoculated with a poison that is calculated to make them mad. If the serum that has been introduced into their blood is really tainted with rabies, their days on this earth are numbered.

They may expect to live but three weeks at the most. Prior to their death they become mad. They may become, as Dr. Giber puts it, "dumb mad," or they may become violent. In the first event, for a day or two previous to death, they are very quiet, seeking the most secluded corner of their cage, and not offering to move, even when offered their favorite tid-bits.

If, on the other hand, the distemper takes violent form, they rage and tear about their cages in a ferocious manner, acting like mad dogs, snapping at any object that is inserted between the bars, and not infrequently foaming at the mouth.

This behavior is quite unlike that which might be expected from such modest and docile creatures as guinea-pigs, and rabbits, too, behave in the same way. And a rabbit or a guinea-pig is so mild of constitution that the sensation of becoming ferocious must be as extraordinary to them as it is to the observer who is ignorant of the cause of it.

Suppose, in the case of human animals, that Dr. Depew were inoculated with a poison which caused him to abhor the thought of making after-dinner speeches. The habit of after-dinner speaking is as much a second nature to the learned doctor as mildness and timidity are to the rabbit or guinea-pig. Mr. Depew's sensations on beginning to feel an aversion to post-prandial oratory must be left to the imagination.

Again, let us suppose that Mr. T. C. Platt were inoculated with a serum which made him despise politics, and loathe the notion of being boss of the Republican party. Is it possible to describe this eminent statesman's feelings under these circumstances?

Would he not think that he had joined another and less happy world, where politics were unknown and bosses unheard of?

The practice of making these creatures mad in order to advance the cause of science is simply another form of vivisection, except that the cutting itself is not the direct object of the experiment. It is hardly a question as to which practice is the more cruel. If you had to choose between being put under anaesthetics and being carved to death after being first made mad, you would without doubt choose the former.

Rust Preventer.

A simple method of keeping iron and steel from rusting is to coat them with a solution of rubber in benzol, made about the consistency of cream. It may be applied with a brush and is easily rubbed off when desired. A coating of more use where the "soot" imparted by rubber would be disadvantageous is prepared by dissolving 2 parts of crystals of chloride of iron, 2 of antimony chloride and 1 of tannin in 4 of water. Apply with a sponge of rag and allow to dry. As many coats can be given as are deemed necessary. When dry, it is again washed with water, again allowed to dry and polished with linned oil. The antimony solution should be as nearly neutral as possible. —New York Telegram.

Shrewd Sawbones.
Reggy—The doctor says I must not drink champagne.
Tom—Why not?
Reggy—Probably he wants me to wait till I've paid his bill.

CASTORIA

for Infants and Children.

THIRTY years' observation of Castoria with the patronage of millions of persons, permit us to speak of it without guessing. It is unquestionably the best remedy for Infants and Children the world has ever known. It is harmless. Children like it. It gives them health. It will save their lives. In it Mothers have something which is absolutely safe and practically perfect as a child's medicine.

- Castoria destroys Worms.
- Castoria allays Feverishness.
- Castoria prevents vomiting Sour Curd.
- Castoria cures Diarrhoea and Wind Colic.
- Castoria relieves Teething Troubles.
- Castoria cures Constipation and Flatulency.
- Castoria neutralizes the effects of carbonic acid gas or poisonous air.
- Castoria does not contain morphine, opium, or other narcotic property.
- Castoria assimilates the food, regulates the stomach and bowels, giving healthy and natural sleep.
- Castoria is put up in one-size bottles only. It is not sold in bulk.
- Don't allow any one to sell you anything else on the plea or promise that it is "just as good" and "will answer every purpose."
- See that you get C-A-S-T-O-R-I-A.

The fac-simile signature of *Chas. H. Fletcher* is on every wrapper.
