THE REVIEW, RICHIBUCTO N. B., NOVEMBER 26, 1896.

DOUBLE CONSCIDUSNESS.

A LITTLE CHILD LFD THEM.

Rare Case Reported by a London Physician.

At a recent meeting of the Clinical Society a distinguished suburban practitioner showed a girl, 12 years of age, who exhibited in the most complete form the condition known as "dual existence," or "double consciousness."

Last year, after a severe illness, which was diagnosed to be meningitis, she became subject to temporary attacks of unconsciousness, on awakening from which she appeared in an entirely different character. In her normal condition she could read and write and speak fluently and with comparative correctness. In the altered mental condition following the attack she loses all memory of ordinary events. though she can recall things that have taken place during previous attacks. So complete is this alteration of memory that at first she was unable to remember even her own name or to identify herself or her parents. By patient training in the abnormal condition she has been enabled to give things their names, though she still preserves a baby fashion of pronouncing.

She sometimes remains in the abnormal condition for days together, and the change to her real self takes papa." place suddenly, without exciting surprise or dismay, and she forthwith resumes possession of her memory for events of her ordinary life, to the exclusion of those which have transpired during the abnormal state. During the last month or so she appears to have entered on a new phase, for, after a mental blank of a fortnight's duration, she awakened completely oblivious to all that had happened since June, 1895, and she alludes to events that took place just anterior to that date as though they were of quite mentally in July, 1895.

These cases, though rare, are, of end of the room.

Slain by Cantibals.

How Husband and Wife Were Held Together by a Baby Daughter.

The ventilating shaft of a Harlem flat is responsible for the publicity of a touching episode, from which the true names are purposely omitted.

Mr. and Mrs. Jones had for several months been living under strained conditions that cast a cloud over their home, which threatened to break in a storm that would disrupt the little family of three members. Last week the breaking point was reached, and husband and wife agreed that a separation was the only possible course. But there was a little daughter, Eva, five years of age. Which parent was to have her? It was decided that the child should answer this question.

"Eva," said the mother, as she was seated near the ventilating shaft, holding the child's hand, while the father, with contracted brows, was standing at the other end of the room. "My dear little daughter, papa and mamma are not going to live together any longer, we are going to separate and go far, far away from each other. We can't be happy in the same house. Now, my child, we want you to say which one of us you will live with. you must choose between mamma and

The eyes of the little girl filled with tears as she turned them on her father, who had averted his face and stood with bowed head. She did not speak then, but was apparently in thought, very deep for her little experience. She loosened the hand that held her and moved quickly toward her father, who turned with outstretched arms and a smile of triumph to welcome her. A deep frown settled on the mother's face.

The child did not then break her silence, but taking her father's hand recent occurrence; in fact, she is living in hers, led him with a tender force which he could not resist to the other "Papa and mamma," she said, as she held a hand of each. "I want to live with both of you. I must have at Loch Lomond, near St. John, was you both. Now kiss, make up and be happy. Please, papa and mamma." The appeal was irresistible. Mr. and Mrs. Jones were folded in each other's arms, and the three for a moment were in tears, which smiles of joy soon banished.

SAN FRANCISCO, Nov. 21.-Following e ose upon the details of the massacre of Baron Von Norbeck, and the party of scientists from the Australian guardship

Albatross, by natives of the faraous Colony group of islands, comes this history of treachery and death at the hands of those cannibals.

News received by the steamer Almeda from Sydney is that the steamship Titus recently dispatched from Australia to visit the coast of New Guiana and the Solomon is in at Pert Jackson and her return voyage from Marau Sound, Sol omon Group.

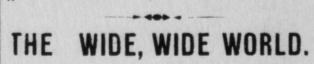

The vessel lay near Bourgainville, for some days and instituted a search for a party of gold hunters, six whites and five natives who started in whale boats for the new gold fields at Moubara from Samouria.

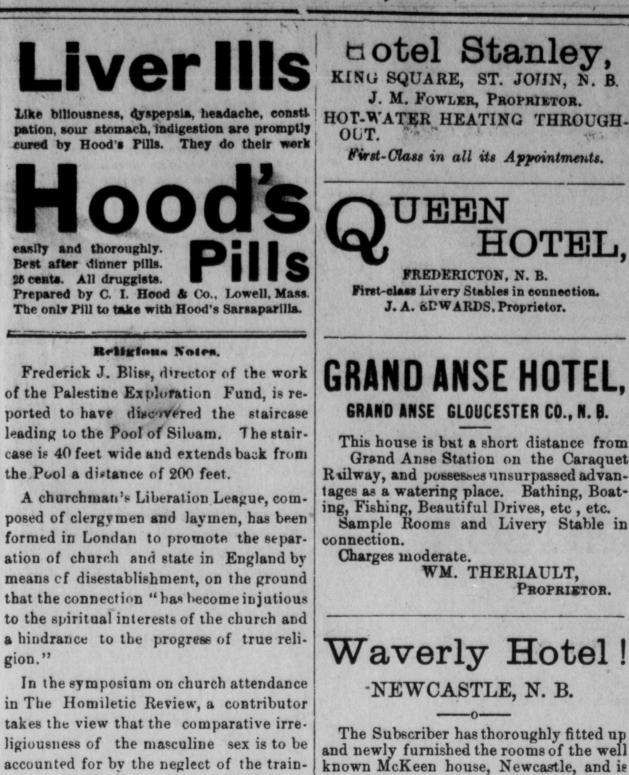

The officers of the Titus, which were at Port Jackson on the 15th of October, report that it is their opinion that the first party of whites were massacred by the head hunters on the coast directly across the straits, from Bourgainville.

The Titus fell in with the revenue cuter Lilly Rock, which was also cruising on search for the party and learned from Captain Gates of the craft that the invest-

gation instituted by the governors and officers proved beyond a shadow of doubt that the gold hunters had put ashore to pitch camp on the beach, had been betrayed by their native guides, killed and probably eaten.

A Winchester rifle and a revolver were found in a native village and the weapons were identified as the property of the gold hunters.

course, not infrequently met with. and they have been carefully studied, especially in France. The hypothesis that finds most favor is that the two halves of the brain do not work in unison; in other words, that there has been some interference with the connections which, in the ordinary normal being, make of a wonderfully composite organ like the brain one organic whole. Sometimes one part of the brain and sometimes the other takes possession of the field of physical activity, and, as each part works to the exclusion of the other, we get the Dr. Jekyll and Mr. Hyde transformation. -London Medical Press.

Testimony of the Photograph,

"It is remarkable what an important part the kodak plays in maritime transactions. as well as others, these days," observed Capt. Tanvers, an old whaler. "You may not know it, but no big ship ever leaves port now without a kodak and a supply of photographic materials. This is especially the case with whalers and other ships who go out on long cruises. The day of listening to yarns ef whalers has passed. To-day the whaler must show the photograph for everything.

"As a whale is worth from \$3,000 to \$5,000 and as it costs from \$25,000 to \$75,000 to send out and maintain a whaler and her crew for her catch, yarns, interesting as they may be, are not regarded by the men who furnish the money for the enterprise as a sufficient remuneration. They want the facts, or photo of them if they lost the facts; nothing else will do. It won't do any more for a party to go off on a loafing cruise and return in nine or ten months, empty, after having eaten up several carloads of provisions and ran up the wage bill into the higher thousands. Every place the ship touches has to be photographed, and a photographic transcript has to be shown of every important incident of the cruise." -Washington Star.

A Good Business Cow.

Professor J. W. Robertson savs: "A cow with the business habit of keeping her accounts with the world paid up. through the man who owns and feeds her, is a good business cow. That is the kind of cow I recommend. Her power of service will be indicated by certain external points. She should have a large, long udder, of elastic, fine quality, a mellow, movable skin, covered with soft silky hair; a long, large barrel, hooped with flat ribs, broad and wide apart; a broad loin, spreading turns to the pile and again falls to out into broad, long hind quarters; an | open twist, with rather thin hips, and a lean neck of symmetrical length, carrying a clean-cut, fine face with prominent eyes. A cow with these points has ability to serve a man well, if she gets a fair chance. That her calves may have powers equal to, or better than her own, care should be exercised in their breeding. The best blood of the breed adapted to the farmer's purpose should be used to enlarge, and not to lessen, the working capacity to be transmitted to her calves."

A Steamship's Momentum.

The motion of a steamship on a calm sea is so smooth and steady that one hardly realizes the tremendous momentum of the vessel under his feet. A collision, even after the engines have been slowed down, gives a startling revelation of the energy of motion. The time required to arrest the motion of a ship and bring it to a standstill tion. can be accurately determined by calculations. These calculations have been recently made for several wellknown ships.

To stop the Etruria, whose displacement is 9380 tons, horse-power 14,321, and speed 20.18 knots an hour, two minutes and forty-seven seconds are required, and during the process of stopping the ship will forge ahead 2464 feet, or nearly one-half a mile. The United States cruiser Columbia, with a displacement of 7359 tons, 17,991 horse-power, and a speed of 22.8 knots, can be stopped in two minutes and fifteen seconds and within a space of 2147 feet. 'The cruiser Cushing, United States navy, whose displacement is

only 105 tons and horse-power 1754, with a speed of 22.48 knots, can be stopped within a distance of 301 feet | er land are not of the most cordial. and in 18.4 seconds. In each case the vessel is supposed to be going at full speed, and the stoppage produced by reversing the action of the propeller.-Railway Review.

A Mechanical Horror.

A most remarkable clock belongs to a Hindoo Prince. Is is the strangest piece of machinery in India. Near the dial of an ordinary-looking clock is a large gong hung on poles, while underneath, scattered on the ground, is a a time when a vigilance committee would pile of artificial human skulls, ribs, legs and arms, the whole number of bones in the pile being equal to the number of bones in twelve human skeletons. When the hands of the clock indicate the hour of 1 the number of bones needed to form a complete human skeleton come together with a snap; by some mechanical contrivance the skeleton springs up, seizes a mallet, and, walking up to the gong, strikes one blow. This finished, it repieces. When 2 o'clock, two skeletons

Paddy Brown, a well known character found on the wayside Saturday morning, in a dying condition. He had been under the influence of liquor the night before and it is supposed fell from his team while on his way home. He lived only a few moments after being found.

A Kansas paper says that the population of the state has increased by less than 2,000 during last year though 10,000 babies were born there. The same paper claims that if a wall had been built round the state eight years ago, so the people could not get out. Kansas would now have 500,000 more than the present popula-

It is quite probable that provision will be made in the coming session of congress for a boundary commission to determine the divisional line between Minnesota and Manitoba. The dispute is over a tract known as Hunter's Island and hinges on whether the main channel of the Rainv Lake river runs north or south of the island.

The Icelandic settlements in the Northwest are reported to be highly successful and it is said that efforts are being made to procure more of these islanders from the frozen north. The Danes will certainly not object to a wholesale immigration and will rather expedite matters, as the relations of the colony and the moth

It is more than two years since two young women were found to have been foully murdered in a church in San Francisco, and a young man named Durrant who was an officer in the Sunday school, was convicted of the murders more than a year ago. And yet he has not paid the penalty of his crime, and the execution of sentence has been repeatededly postponed on technical grounds. There was have attended to the case before this.

Flax Straw as Fuel. The manager of an electric light works has adopted a practice which may be of great service in districts where coal is scarce. He is located so far from the nearest coal fields that transportation charges make the use of coal prohibitive.

boys, their efforts are too feeble and fickle , accomplish much good." The result is that boys show an avertion to the Sunday-school and then to the church. The conclusion reached by the writer is that if we would have more men at church, we must begin early with the boys.

The British Weekly has been instituting an inquiry into the alleged decline of church attendance in Great Britain during the past quarter of a century. The consensus of opinion favors the belief that there is no general decline in church attendance, except, perhaps, in some cities where the population has rapidly increased In Ireland and Wales there has been an increase. In Scotland a decline is noticeable, which The Weekly explains by referring to the fact that formerly among the Scotch a mighty force of public opin. ion compelled regular attendance on the sanctuary.

At the time of the great discussion over the prize fight at El Paso, Texas, the pastors of the churches opposed it to their utmost, and by that course aroused a great

deal of opposition among the merchants and other classes. They threatened to withhold their support from them ; and, according to The Advance, the statement is made that all the Protestant pastors who were in the city at that time have been compelled to vacate their pulpits through want of congregations and financial support. Those pastors er joy the blessedness of being persecuted for righteousness sake, so rare in these days.

The Civilta Cattolica for January, 1896. giving the result of carefully compiled statistics, says there are in the world 240, 000,000 Catholics.

Itching, Burning Skin Diseases Cured for 35 Cents.

Dr. Agnew's Ointment relieves in one day and cures tetter, salt rheum, piles, scald head, eczema, barber's itch, ulcers, blotches and all eruptions of the skin. It is soothing and quieting and acts like magic in the cure of all haby humors; 35 cents. Sold by W. W. Short.
