BUTTER MAKING ON THE FARM.

June and September are of course the hest months of the year for making butter upon the farm, or in the factory either, and July and August two of the most difficult. July will now soon be upon us and to sustain our reputation as butter makers we must make especial provision against undue heat through all the stages of the business. Our first work is to have the milk aired. The practice of straining the milk directly into the creamers, then covering these more or less tightly and submerging immediately in cold water, because the various little taints from the food and the dust falling into the pail will be retained in the milk and cream and condensed as the milk cools. On the other hand, it will not do to cool milk before setting it in creamers, as the cream will not seperate nearly so readily. The best practice is to air the milk and warm it slightly at the same time, then not only will the flavors be largely removed but by putting it in water at a little over 100 degrees Fah. the separation of the cream will be more complete than if set at 90 degrees, which will be about the temperature when ordinarily strained. An aerator such as the "Sussex," where the milk may be cooled or warmed as it is aired, is the best contrivance to put milk in proper condition for deep setting cooling. Water for deep setting cans should always be below 45 degress Fah. otherwise clean

skimming cannot be had. The reason that open pans are said to give a better flavored cream than deep setting cans is due to the opportunity which is afforded the milk of being thoroughly aired. It is very necessary with open pans, however, that the dairy room shall be cool and the air pure. For best results the temperature must be below 60 degrees Fah.

The care of the cream is all important in making good butter. It must not be over ripened before churning nor ripened at too high a temperature: 60 degrees Fah. is, as a rule, the best temperture for ripening. If cream is to hold for three or four days it should be cooled to 45 degrees and kept there until within 18 to 24 hours before churning and then warmed to 60 degrees. In July and August the churning temperature of cream will have to be comparatively low. Do not nave the butter come inside of 30 minutes. Cool down the buttermilk with ice or cold water. Wash the butter with water at such a temperature as will leave it in the condition you find best for working. If the day is warm and you wish to leave the butter some little time before working, the temperature may be as low as ice will make it. Salt the butter in granulated form in the churn and work it in a cool room. Sprinkling an abundance of water on the floor will give a comparative coolness to the air. Ice may be se; up on a rock or a galvanized cylin- signed in 1865, was so heavy that only der can be filled with salt and ice. This in a small room, will keep the tempera-

ture away down. must either be submerged in pickle or tion of weight, obtained 10.63 i. h. p. kept at a low temperature by some cooling method. The cylinder system above mentioned is advised by the Dominion Department of Agriculture wherever a sufficient amount of business is done to justify the expense.

July and August butter cannot be well and easily made without either an abundance of pure cold water or ice. Fortun- factory that various forms of disease are ately, in this country both are generally now systematically treated by continuavailable. Ice can be dispensed with only when quantities of water at 40 degrees can be secured. The dairy room should always be near the water supply or where tive Farmer.

Took's Penetrating Plasters.

The oldest male inhabitant of St. Andrews, John Treadwell, aged ninety-one years and four months, died at his late residence, Water street, last Monday. The late John Treadwell was born and always lived in St. Andrews. He was a block and spar maker. In former years, when St. Andrews was a ship building centre, he did a great deal of work.

For Indigestion.

CHAPTER XIII.

1. By neutralizing the excess of acid in the stomach-

2. By exciting the natural accumnlation and action of the digestive fluids in the stomach-

3. By vitalizing all the organs on which your health and comfort depends for the proper digestion and assimilation of food-

4. And by their tonic action upon the stomach, bowels and liver-through the blood, Dr. Von Stan's Pineapple Tablets accomplish these remarkable results in all cases of dyspepsia and in-

digestion. 5 Most cases are cured with one box. Sold at all druggists for 35 cents

Sold at Short's Drug Store.

-sixty tablets in a box.

Doctor Von Stan's Pineapple Tablets Encourage you to eat what you like, and they correct indigestion in a natural way. They relieve distress in an instant.

The Power of Lyddite.

It is a very difficult problem to ascertain the numerical superiority of lyddite over other explosives. It is certainly six times more powerful than nitroglycerin, which in turn is at least eight times more powerful than the same weight of gunpowder. Further, all experience shows that its effects are spread over a much greater area than in the His silvery hair falls on her locks of gold, case of nitroglycerin or dynamite, which are intensely local in their action. It has been frequently erroneously stated that lyddite or melinite may be used as a substitute for cordite or gunpowder in propelling a projectile. Such could not be the case, however, as the explosion takes place so rapidly that the chamber of the gun would be

inevitably shattered. Probably one of the greatest advantages of lyddite is its absolute safety to handle, which we can realize when we recall its use in the arts for over a century without its powers being even suspected. In this respect, combined with its superlative destructive capacities, lyddite approaches an ideal explosive for shells, and it is safe to predict that it will play an extremely important part in the great military operations of the future. —Chambers' Journal.

Mother Love Conquered. A pathetic incident which happened recently in this city shows that a strong will can sometimes do more in combating dread disease than all the skill of the medical fraternity. An entire family, consisting of both parents and four children of tender age, was stricken with malignant pneumonia. The wife was apparently the worse sufferer, and her case was given up by the doctors as beyond hope. Meanwhile her husband became suddenly worse and died. Everything that medical science could do had been done for the wife without avail, and after consultation the physicians decided to take a desperate risk and tell her of her husband's death. reasoning that the shock might kill her. but also might arouse her ebbing strength and assist in checking the coma which was already presaging dissolution.

the devoted mother learned that her death would leave her children without last energies and she not only survived the great shock of her life partner's death, but she actually recovered .- God calls you, don't be feared, for at the Philadelphia Record.

The Evolution of the Steamship. When it seemed that the limit had about been reached with wrought iron as the main reliance of the designer. mild steel had been so perfected as to enable progress to be maintained. The large boilers necessary to withstand the high pressures and furnish the power for high speeds would have been impossible but for mild steel, and the same thing is true of the moving parts of the engine. It may be noted also that workmanship had improved, and the use of antifriction metals for bearings, combined with this improved workmanship. enabled the high rotational speed to be carried out with safety and reliability.

Six Months In a Bath.

Life in a bath must be somewhat monotonous, but it is quite common in the best of our modern hospitals. At first it was tried only in a few absolutely hopeless cases, but the results were so satisous immersion in water.

Some time ago, for instance, a young girl was dying from a complication of terrible diseases. She was a mere shadow, and nothing but death was before ingenious doctor placed her on a sheet and sank her into a warm bath, so that only her head remained above water. The bath was kept constantly warm, and in it she ate, drank and slept for 183 days and nights. At the end of the time she stepped out fat and strong.

In skin diseases the continuous bath is invaluable, for it can be medicated, and many hopeless cases of burning have been successfully treated in this extraordinary way. - Exchange.

Coronets.

The coronet of a duke consists of alternate crosses and leaves, the leaves being a representation of the leaves of the parsley plant. The princes of the blood royal also wear a similar crown The state headgear of a marquis consists of a diadem surrounded by flowers and pearls placed alternately. An earl, however, has neither flowers nor leaves surmounting his circlet, but only points rising each with a pearl on the top. A viscount has neither flowers nor points, but only the plain circlet adorned with pearls, which, regardless of number. are placed on the crown itself. A baron has only six pearls on the golden border, not raised, to distinguish him from an earl, and the number of pearls render his diadem distinct from that of a vis-

Change of Climate In Asia.

Professor Muschketoff records the fact that observations at eight glaciers in the Caucasus extending over a period of eight to ten years show that they are steadily receding. The termini of the glaciers are retreating from 9 to 38 meters every year. - American Geographical Society's Bulletin.

She Recalled an Instance. "Mrs. Peddicord." said that lady's husband, "did you ever say anything that you afterward regretted saying?" "Certainly. I said 'Yes' once and have been sorry for it ever since."-

People Who Live Long.

Among the many curious things noted by the actuaries the following are a few of the most interesting. Women have a much better prospect of long life than men, and the chances of married people are distinctly higher

than those of bachelors and old maids. From the data provided by sie records of various churches it has been deduced that the peaceful Quakers have most frequently received the blessings of long life promised in the fifth commandment, while the death rate is remarkably high among Methodist clergy men. Annuitants as a class live from three to five years longer than other people, and this is not due to human perversity, as some humorists have suggested. It is undoubtedly due to the lack of worry regarding the changes of fortune when a regular income is a cer-

Although no statistics have been callected on the death rate in the civil service, where the yearly income almost partakes of the character of an annuity. it would perhaps be found that there is some scientific basis for President Grant's cynical observation regarding this class. "Few die and none resign. -Ainslee's Magazine.

A Man of Resource.

A big, uncouth looking stranger, with shoulders like a Hercules, walked into a department store late one afternoon. and, after gazing about a minute, stepped up to a salesman and made known his wish to buy a shirt. A couple of samples were shown him, and he informed the salesman that either one would do.

It was an article that sold for \$1.50. and in making payment the stranger pulled from his hip pocket a huge roll of bills. He apparently skimmed them over in search of a small bill, but he could not find one of less denomination than \$500. One of these was handed the surprised salesman, but he arose to the occasion and sent it away with the cashboy. When the change came, it was nearly all in small bills. The stranger interrupted the salesman in his work of counting the bills by reaching for the pile and wadding it into his hip

"Oh, I guess it's all right, and you give that shirt to a porter if you can find one big enough to wear it. All l wanted was the change. You see, it was after banking hours, and I am a man of resources. Good day."-Philadelphia Record.

Multum In Parvo.

"John," said the old man to his son. "I will give you £100 to go away with Maybe, as you don't like my business. you will find a better one.

Three weeks later the young man landed in New York. A month later. finding but £3 in his possession, he determined to return home again. It was best to let his father know beforehand. but how? A letter would be too slow. so off went John to the telegraph office.

"A quarter (one shilling) a word to London, sir," answered the polite clerk to his inquiry.

"I want to tell my father I've spent all my money, and I'm sorry, and I'm coming home and want him to forgive me and a lot of other things, and I can only pay for six words to tell him everything," said John.

"Cut it short." replied the clerk. John sat down and thought. Soon after, to his immense astonishment, the The Ontairo Department of Crown old man received the following cable

THE DANGER SEASON

An Appeal to the Suffering and Diseased.

Paine's Celery Compound The Great Deliverer and Rescuer Cures Even at the Eleventh Hour.

At this time we desire earnestly to appeal to men and women who are ailing and in a low condition of health.

There are thousands of sick peopledisappointed and almost hopeless-who have ceased to think of their danger, imagining they are incurable because their doctors have failed and the vast varieties of medicines they have used have produced on good results. Courage once more, suffering brothers

and sisters! Rekindle the almost dead embers of hope, you sadly deceived and disappoint-

Freedom from disease and suffering, and a new and happy life will be your portion if you have faith enough to make trial of that life giver and disease banisher, Paine's Celery Compound, that has in the past rescued so many from the grave.

If Providence and our advice would inspire you that there is life in Poline's Celery Compound, your efforts must be prompt and honest. During the present neated term of summer, it is perilous to neglect your aches, pains and sufferings. Inaction and wilful neglect for one day may result in death.

If you suffer from nervous prostration, liver disease, kidney complaint, dyspepsia rheumatism, neuralgia headache, impure blood and digestive troubles, you should derive instant inspiration from the army of men and women of the best families of Canada who have given their written testimony in favor of Pine's Celery Compound, and be further encouraged by the recommendations of the most eminent medical men who prescribe Paine's Celery Compound regularly.

With such testimony and the indorsation of medical men, is it wise or prudent to neglet the use of earth's best medicine? He or she who refuses life and health is surely worse than a skeptic. Bear in mind that Paine's Celery Compound cures even at the eleventh hour.

AN IMPORTANT EVENT.

THE BLESSING OF THE CHIME OF BELLS AT BUCTOUCHE AUGUST 9.

BUCTOUCHE, June 26 .- Owing to the

energy of the cure, the Rev. Father Michand, Buctouche chapel is to have shortly what few churches in the Maritime Provinces can boast of, viz., a chime of bells. The bells will be placed in the chapel and blessed on the 9th of August next. To celebrate this event with becoming ceremony excursion rates have been arranged for over all the provincial railways and many thousands of visitors are expected to be present. The visitors will be entertained on the beautiful picnic grounds on the Bay Shore, a few rods from the Presbytery. Dancing booths will be erected, all sorts of innocent amusements provided and refreshments of all kinds obtainable, so that the visitors cannot fail to pass a most enjoyable and profitable time. In addition to the ordinary visitors there will be present many of the highest dignitaries designed by himself or a picture which of the Catholic church from different parts of the Dominion, and also prominent Protestant divines The Premier of Canada has intimated that if possible he will either himself take part in the ceremony or send some of his cabinet ministers. One or more of the Federal ministers have promised to come, and the Fremier and members of the Local and Federal Legislatures are expected to grace the day with their presence. Nearly all the leading choirs of the different Catholic churches throughout the provinces have been invited to participate in the ceremony and the reverend father says that at least two hundred male voices, aided by instrumental music, will render the sacred music chosen for the day.

The church, which is being entirely renovated for the event, is being rapidly repaired. The interior decoration, prepared from the plans of Father Michaud himself is nearly completed, the work being done solely by the farmers employed around the church property. The chime to be placed in the chapel has been ordered from the firm of Harvard & Sons, of Villedieu, France, the most celebrated bell makers in the world, and will consist of three bells aggregating in weight consider-Halsted-No: that's where the queer ably over three thousand pounds. Suitable inscriptions commemorating the blessing will be placed on the bells, on the largest: "Homage to the Blessed A young lady of very extraordinary Trinity, Father, Son and Holy Ghost," capacity lately addressed the following | "Leo XIII., Pope," "Victoria, Queen." "Sweeny, Bishop," "Michaud, Pastor," "Buctouche, N. B."

On the second or medium bell: "Homage to the Holy Family, Jesus, Mary, Joseph;" 'Minto, Governor General;" "Laurier, Premier;" "McClelan, Provincial Governor;" "Emmerson, Premier;"

"Buctouche, N B." On the smallest: "Homage to the man with a quiet business, an elderly. (Titular, St. John the Baptist;" "Peace on earth to all men of good-will and rest to the departed souls," "Buctouche, N. B."
