

Asthma Gasps

Too many asthma sufferers give up their search for cure, believing that their particular case is beyond the compass of scientific treatment.

It is only necessary to point all such to a new hope in Dr. Chase's Syrup of Linseed and Turpentine, the one great remedy which has proven its efficiency not only as a prompt relief, but also as a thorough cure for asthma.

Mrs. George Budden, Putnamville, Ont., says:—"I feel it my duty to recommend Dr. Chase's Syrup of Linseed and Turpentine, as I had the asthma very bad; could get nothing to do me good. A friend of mine persuaded me to try this remedy, I did so, and it cured me."

It is impossible to imagine a better treatment for asthma than Dr. Chase's Syrup of Linseed and Turpentine. It soothes the excited nerves, clears the bronchial tubes, gives prompt relief to the frightful spasms, and, when used regularly, thoroughly and permanently cures asthma. 25 cents, all dealers', or Edmanson, Bates & Co., Toronto.

FARMERS' PARLIAMENT.

(Continued from first page.)

means of bringing in men from the outside, from the United States and from the other Provinces of the Dominion, which has tended to encourage a feeling of international and interprovincial good will. Then there was a great amount of good done by the sending out of the printed reports of the proceedings of these conventions, which made it possible for a very large number of farmers to get the benefits of the various discussions and addresses. Moreover, conventions of such an association as this tends to lend enthusiasm to those attending and to fill them with encouragement, which is a great source of strength to a man and tends to lead him to useful actions.

He went on to emphasize the dignity and usefulness of labor. Civilization is the result of labor. Some people affect to despise labor and look up to so-called "culture." "Culture" doesn't mean idleness. The test of every man's life should be, what has he given to the World?

Passing on, Prof. Robertson said that true culture meant the ability to do something of lasting value to the individual and to the community. Education was not something tacked on from the outside, but was the growing out of something required within.

He then proceeded to outline his scheme for the improvement of rural schools by the establishment of school gardens and elementary technical education in the growth and habits of plants. The funds for the carrying on of this scheme had been provided by Sir Wm. C. Macdonald, and it is confidently expected that such a course of instruction will provide our boys and girls with a system whereby they may be enabled to see and do things for themselves, and thus equip them for useful citizenship.

Dr. G. M. Twitchell, editor Maine Farmer, on being called upon said he was glad to hear Prof. Robertson refer to the good work done by Farmers' Institute meetings. He (Dr. Twitchell) had the honor to be the first institute speaker who had spoken in New Brunswick. He had noted with peculiar interest the growth of agricultural sentiment in this Province. If future improvement increased proportionally he believed that in ten years the farming of the Dominion will be revolutionized. One constant determination should be to improve our methods and we should bend every energy to attain a high and lofty ideal.

SEED SELECTION AND COMMERCIAL SEEDS, BY GEO. H. CLARK, OTTAWA.

The various varieties are obtained by careful selection and by cross fertilizing of varieties. Farmers should go slow in adopting new varieties which have not been tested by repeated trials.

Some of the causes of the decrease in productivity of our crops were that the seed was used from poor crops which were grown on poor soil, and also in the case of grain, from too thick sowing, the plants not being able to stool out and attain a healthy growth, and then plants of weakened vitality were produced, which could not develop seed of high vigor.

He referred to the Macdonald Seed Grain Competition for prizes offered by Sir Wm. Macdonald. About 800 boys and girls are competing for these prizes by yearly planting seeds selected for excellence and vitality. The results of this competition cannot fail to be of great importance to the country.

He described the compulsory guarantee system in force in the State of Maine and also the voluntary system in Europe,

whereby seedsmen guarantee the purity and vitality of their seeds.

He urged farmers to buy only from seedsmen with a good reputation and to demand a guarantee of purity and vitality and as trade usually accedes to reasonable demands, he had no doubt that in time a guarantee could be secured from the seeds men.

W. Saxby Blair, Horticulturist at Nappan, next gave a short but interesting talk on the selection of the varieties of apples for planting in New Brunswick. He advised intending orchardists to buy stock from the nearest reputable nursery and to select only those varieties which experience and observation had proved to be most likely to succeed in any given locality. Too many varieties should not be grown but attention given to a few of the most approved sorts.

THE REQUIREMENTS OF THE BEEF TRADE BY G. H. GRIDALE.

The comparative infancy of the Canadian beef trade is now about past. The United States, which was a serious competitor with us in the Old World markets, has witnessed so great an expansion of trade within her own borders that the game as far as the English market is concerned is in our own hands.

To meet the present and future market for beef we must have animals which are free from roughness and calculated to dress out with a mean percentage of offal, as all stock for this market is bought by live weight.

Cattle of this stamp can be secured by breeding. The use of a good individual sire of any of the recognized beef herds is an absolute necessity and one should be secured which has the power to transmit his beef qualities to his offspring.

[Cows from the first cross with a purebred sire and a good grade cow will be of average beef qualities, while the second cross is almost sure to be good. The profitable beef steer should weigh at two years old not less than 1250 to 1400 pounds alive. To get these weights demands good breeding and feeding.]

The speaker emphasized the importance of early finishing. Experiments along this line have been made, with the result that steers fed to 30 months costs 5½ cts. per pound, while those finished at four years old cost 7½ cts.

It is absolutely necessary to keep calves on a good ration from the start. Keep them growing every day.

The starting of the steers is important, and tests have been undertaken to determine the relative profits in feeding animals loose or tied up. These tests have favored loose feeding at first. The second test showed a gain on steers tied up, while the third favored tying up for a time and finishing the steers in loose stalls. By feeding in loose boxes the farmers have plenty of bedding, could make more manure and could perhaps feed to better advantage. However, this is a debatable point.

The method of feeding steers at Ottawa is as follows: After coming into the stables from grass, the steers are fed succulent food at first in the shape of turnips. We can't hope to make much gain the first three or four weeks; feeding in the shape of fodder should be commenced lightly and increased as the appetite of the animals improve. Grain food should be added after say the first six weeks. Commence with one pound of grain per head per day and gradually increase the amount according to the gain made by the animal. The finishing period, the last month, demands skillful feeding and is accomplished by the addition of concentrated grain foods in the shape of corn meal and oil meal.

Simpson Rennie, of Kelvin Grove, Ontario, followed Prof. Gridale with a brief address in which he emphasized the importance of starting with the right kind of animal for beef, feeding a full ration at all times in order to keep the steers growing and that early maturity should be the point constantly aimed at.

THE HORSE WANTED FOR THE MARKET.

This question was dealt with by Dr. G. M. Twitchell, editor of the Maine Farmer, Augusta, Maine. His lecture was illustrated by large photographs of the type of horse advocated in his address. "Conditions," said he "are rapidly changing and our thought of what ought to be must give way to what is. No man can fight this inexorable law of progress; we must fit it. Are you ready to fit the market, or are you fighting it. The slow motioned, low-headed, indifferent bred horse is a curse to the country. It is sending the boys and girls away to the cities. It kills the ambition and dwarfs the enthusiasm of the farmer. The best is none too good for any farmer and anything else is an injury. An up-headed, intelligent, nery horse is a promoter of better methods, yes, of better manhood. Mental faculties

are dulled or quickened by the team a man drives. If it be the best in the neighborhood, that man's head is erect when he drives to town, and he comes dressed in good clothes and takes his wife with him in her best attire. He is glad to show them off. If the horse is a nondescript, a laggard and the whole outfit corresponds, the man loses ambition as he crawls into town.

"The horse wanted to-day as never before is either the prompt, quick acting, large size, half blood draft, or the stylish, upheaded, courageous, well formed driver, weighing from 1050 to 1200. Speed, as such, plays no parts in the development of our agriculture or other prosperity. A noted authority says "Only two classes can afford to own a race horse, the extremely rich and the extremely poor."

"The road horse is the cheapest and best farm horse to-day. The farmer without pride enough to drive an up-headed, stylish, free, easy and rapid roadster had better yoke up his steers and be content.

"Ten thousand high class road horses can be sold in this Province at profitable prices in 1902. How many are there ready for the market? How many will there be in 1907? Find the sires where you will, but find them, and be sure they have within them the power to transmit what the most critical buyer is asking for. I believe that the French Coach horse carefully selected from the Government farm, representing more than 200 years of breeding under rigid Government supervision, to offer the shortest and best cut to profitable horse breeding, because of his prepotent powers, backed by strong individuality. Better horses and cattle will surely secure better farms and surroundings. Larger yields and increased prices will arouse ambition for sunnier homes, and quicker music in farm work will lead to larger crops and a bigger bank account."

TOO GREAT A RISK.

It is dangerous to neglect a simple case of itching piles as the trouble is likely to become chronic and develop into fatal incurable fistula or cancer of the rectum. A single application of Dr. Chase's Ointment will quickly relieve the itching and burning sensation, and a few boxes will cure any case of piles. This standard ointment has probably relieved more suffering than any preparation you can mention.

"Pooh!" said Daisy, scornfully, "the idea of your being afraid of a poor old house-dog! Why, he eats out of my hand." "I don't doubt it," replied Burroughs, dubiously. "But what I am afraid of is that he might take a notion to eat out of my leg."

"What would you say," began the valuable prophet of woe, "if I were to tell you that in a very short space of time all the rivers in this country would dry up?" "I would say," replied the patient man, "Go thou and do likewise."

Suffocating With Croup

Croup is the terror of every mother and the cause of frequent deaths among small children. Dr. Chase's Syrup of Linseed and Turpentine brings prompt relief to the loud, ringing cough, makes breathing easy and prevents suffocation. It is mothers' favorite remedy for coughs, colds, croup, bronchitis, whooping cough and asthma.

Mrs. F. W. Bond, 20 Macdonald street, Barrie, Ont., says:—"Having tried your medicine, my faith is very high in its powers of curing cough and croup. My little girl has been subject to the croup for a long time, and I found nothing to cure it until I gave Dr. Chase's Syrup of Linseed and Turpentine. I cannot speak too highly of it."

25 cents a bottle, all dealers, or Edmanson, Bates & Co., Toronto.

Dr. Chase's Syrup of Linseed and Turpentine.

To the February "Cosmopolitan" Sir Charles W. Dilke contributes "The Naval Strength of Nations," in which he describes a great many first class warships and shows the strength of England's navy as compared with the navies of other countries. Sir Charles favors a higher standard than that of England against any other two, but admits that that standard is high enough for ordinary purposes. The article is illustrated with pictures of many of the most notable war vessels of different nations. Another illustrated marine article is by Louis Nixon, who deals with the "development of shipping in the United States," and illustrates his contribution with pictures of seven masted schooners and the like. Not very like these and yet akin in some respects is Orrin E. Dunlap's "Niagara—the Scene of Perilous Feats," which is illustrated with portraits and describes the careers of persons who have in air and through the water done marvellous things in that wonderful river. Jacob A. Ris has another chapter in the story of the life of Theodore Roosevelt. The editor, John Brisbane Walker, discusses the work of the Capital and Labor Commission which met in New York last December, Julian Ralph in a richly illustrated contribution gives much information respecting the variety of postal cards which are to be found principally in Germany. Another illustrated article of considerable interest is Charles R. Sherlock's "Where Vandeville Holds the Boards." Richard T. Ely, an able writer on economic subjects, discusses "Ethical Aspects of Ownership" Among the contributors of fiction—this being the mid-winter fiction number—are I. Zaagwill, Bret Harte, Thomas A. Janvier and Edgar Saltus. Several pages are given of Humorous and Satirical Cartoons, by some of the most famous cartoonists of New York.

TO HAVE BEAUTIFUL SKIN.

Every one who would have a clear, soft velvety skin free from pimples, blackheads, redness and disfiguring eruptions must use Dr. Chase's Ointment. It is a true food for the skin, does not clog the pores as do powders, and insures permanent benefit. There is not a single itching, burning skin disease of men, women or children that Dr. Chase's Ointment will not cure. Mothers find it invaluable for Baby Eczema, scald head and chafing on the little ones.

Customer—See here, waiter, I found a button in this salad.

Waiter—Yes, sir; that's part of the dressing.

"The O.L." Emulsion
of Cod Liver Oil.

(Trade Mark.)
For Lung Trouble,
Severe Coughs, Colds,
Emaciation, &c., &c.

Few systems can assimilate pure Oil, but as combined in "The O.L.", it is pleasant and digestible. Will build you up; Will add solid pounds of flesh; Will bring you back to health.

50c. and \$1.00 bottles.
