

The Only Liniment

Equally good for internal and external use. JOHNSON'S Anodyne Liniment. It is the oldest, safest and most reliable liniment on earth. It is made of pure vegetable ingredients. It is the first thing needed in all the accidents with lacerations or abrasions. After a vigorous ride or exercise of any kind, briskly rubbing the muscles with

JOHNSON'S Anodyne Liniment

will destroy the cause of the pain. It should be kept on hand for prompt treatment of colic, cramps, diarrhoea, cholera morbus, bites, sprains, burns, stings, chafing, chilblains, colds, croup, catarrh, bronchitis, la grippe, lameness, muscle soreness, and pain and inflammation in any part of the body. In two size bottles, 25 cents and 50 cents. S. JOHNSON & CO. 30 Custom House St. Boston, Mass.

NEW BRUNSWICK'S NATURAL RESOURCES.

EXCELLENT ESSAY BY H. O. MCINERNEY WHICH WON THE PRIZE GIVEN BY H. R. EMERSON IN CONNECTION WITH ST. JOSEPH'S UNIVERSITY CLOSING.

(Continued from page 4.)

Iron was formerly shipped from Jacksonton, Carleton county, to the extent of 40,000 tons. Iron is also found in St. John county. The immense quantities of coal near Grand Lake must before long aid in the opening of a great iron industry in that locality. Blue phosphate of iron is plentiful in the clay banks situated about 25 miles above Grand Falls. According to Major Leckie, who spoke before the Canadian Mining Institute in 1900, New Brunswick "is likely to be a producer of nickel." The major claims that the large masses of pyrrhotite near St. Stephen are more continuous and extensive than those of Nipissing and Algoma, the average in places running nearly three per cent. nickel and copper. He also remarks that the situation of the nickel deposits is commercially admirable. Antimony is abundant in Kings and York counties, and Galena in York county. Gold has been taken from river washings in the northern and middle counties, and mineralogists tell us that New Brunswick will yet produce the precious metal in paying quantities. Manganese is plentiful in St. John and Albert counties, and graphite deposits are extensive in St. John county. The vast peat bogs of St. John, Gloucester, Northumberland and Kent must soon claim the attention of New Brunswick's people, for peat is an excellent fertilizer and makes splendid fuel. With all those above mentioned, the limestone of Charlotte, Kings, Albert, Carleton, Victoria, Madawaska and Gloucester counties, and especially of St. John county; the great granite works of St. George, and the smaller deposits in Kings and Queens; the immense extent of free stone in Albert, Gloucester and Northumberland, and the profitable freestone works in Westmorland; the slate of Charlotte, Queens, Victoria, Madawaska and Restigouche; the brick clay of St. John, York, Northumberland and Westmorland; the silica of St. John, York and Kings; the mineral paints of Albert, Northumberland and Charlotte, and the numerous mineral springs of Kings crown New Brunswick a potent prince in the mighty mineral kingdom.

New Brunswick's land traversed its relieving to those "Who from the toil and tumult of their lives, Steal down to look where naught but ocean strives."

The waters of New Brunswick are a natural resource of wonderful importance. Dr. Hannay says that "there is no country in the world that is better watered than the province of New Brunswick." To comprehend the truth of Dr. Hannay's statement, one has but to look at the map and see such rivers as the St. John, the Miramichi, the Restigouche, St. Croix, Petitecodiac and Nepisquit flowing into spacious bays and harbors. Of the harbors, St. John is especially important, chiefly on account of its central situation and its permanent open state, both of which renders it particularly suitable as the great winter port of Canada. Her opportunities for shipping and rafting are seen to be great when one contemplates the number, length and depth of the rivers, bays and harbors. New Brunswick's coast waters and inland seas, however, are too well known to need mention here.

A natural resource of immeasurable worth is the water power available in the province. The Grand Falls of the St. John river, have a power estimated at 100,000 horses, the falls having a drop of 60 feet perpendicular, and a gradual drop of 60 feet more in the course of a mile. At Hay's Creek on the St. John there is a fall of 95 feet perpendicular. On the Salmon, Little River, Pokioik, at Three Brooks and on the Sisson there are falls ranging from 150 to 500 horse power. Dr. Hannay believes that if the Tobique were dammed 1,000 horse power could easily be attained there. The Northwest Miramichi could produce 60,000 horse power, enough engineers say, to run every mill on the Miramichi. The falls on The Big Sevogle, Barnaby, Southwest Miramichi, Bartholomew, Renous, Dungaon and Pollet run from 2,500 to 10,000 horse power. The Grand Falls of the Nepisquit are estimated at 20,000 horse power, the Papineau and Tetamagouche at 3,000 each, a fall on the Nigadoo at 500, and the Great Falls of the Upsalquitch at 15,000, and if the Caraquez was dammed a power of 15,000 could easily be produced. The upper and lower falls of the St. Croix are of no little importance.

The fisheries of New Brunswick's waters constitute a resource from which 18,145 men draw a livelihood, and a resource which seems not to diminish from frequent heavy draughts upon it, for the value of the catch rose from \$1,131,433 in 1879 to \$4,119,899. Our province is credited with one-fifth the total fish catch of Canada and the great facilities which New Brunswick offers for both winter and summer fishing place her among America's foremost fish exporters.

Seaweed and dulce, both abundant in the province, find a ready market at home and abroad. The ice of winter proves very valuable for business and private use. Sponges are found in the Bays of Chaleur and Fundy.

Besides being a source of wealth to the money seeker our lakes and streams, like our forests, are a source of delight to the pleasure seeker. The salmon of the Tobique, the trout of the Tabusintac and the geese, ducks and trout of the North Shore annually draw legions of sportsmen from far and near.

A natural resource that is found at sea and on land and one that ever proves either a terrible detriment or a wonderful aid to man's health, wealth and happiness, is a country's climate. New Brunswick possesses an ideal climate. Her people yearly experience the wholesome frosts of a not too severe winter and the necessary heat of a moderately warm summer. The snows of winter loosen the soil and prepare it for the spring seeds; they make easy traffic from the lumberman's camp to the river, and the frozen waters give fishermen an opportunity to net immense hauls of smelts. The warmth of the spring and summer soon causes fruit and grain to grow quickly, opens up the streams where logs are lying ready for the drive and where schools of fish swim to the surface in search of fisherman's bait. Then comes the long and beautiful autumn, "best portion of the various year," when New Brunswick's maple leaves turn scarlet, and her tall grasses fall under the scythe of the mower, and her wild birds screech a last retreating howl around her beaches.

The greatest of all New Brunswick's resources must not be forgotten—her men with their muscle and intellect developing the dormant riches of their country. New Brunswick's people have always been here, and heaven grant, will always be an intelligent people with a true love of God, fellowmen and country, a people like Thomson's hero:

"In public life severe, To virtue still inexorably firm, But when beneath his low illustrious roof Sweet peace and happy wisdom smoothed his brow, Not friendship softer was, nor love more kind."

ACADIEVILLE.

A young man just returned from Sabie River reports that he has discovered coal up in that region. He thinks it of the finest quality. A party intend setting out at an early date to investigate.

The closing exercises of school No. 5 took place on the 25th. A large number of visitors were present. The children proved most proficient in the various branches of study, and reflect much credit on the teacher, Miss Babineau. Addresses were delivered by trustee Cormier and others who congratulated Miss Babineau on the efficient manner in which the school has been conducted.

Stops the Cough and works off the Cold. Laxative Bromo-Quinine Tablets cure a cold in one day. No cure No Pay. Price 25 cents.

THE AUTOMOBILE RACE.

BELFORT, France, June 27.—The Paris-Vienna automobile race, which started for Champigny, near Paris, early yesterday, was continued to Bregenz, Austria, to-day. The first machine left there at 4 a. m. W. K. Vanderbilt, jr., who was the fifty-fifth contestant to arrive here yesterday, has decided to abandon the race and will return to Paris.

DO IT NOW TAKE

Run down, pale, weak, overworked women, nervous and tired out with household cares: constipated, liver torpid, with blotched sallow muddy complexions, blood thin, and impure, need building up and a thorough renovation of their systems. Herbine Bitters the great blood purifier, is your best friend. It gently moves the bowels and thus removes the cause and acts directly on the liver and kidneys, keeping them active and strong, while at the same time it clears the complexion, increases the flesh, brightens the eye and gives strength and vigor to the whole system.
