

Judge Wells Returns from England.

His Honor Judge Wells, who has been on an extended trip to the Old Country, reached Moncton on the mail train last night, and his many friends are pleased to see him looking so well. He enjoyed his trip immensely and has nothing but the highest encomiums for London and the people of that great metropolis. Judge Wells left Moncton on May 8th and sailed on the 10th of May from Montreal on the Tunisian of the Allan Line. The trip across the ocean was a pleasant one and he landed at Liverpool on May 19th, proceeding to London and reaching there the same evening. His Honor remained in London two or three weeks visiting the principal points of interest. He then took a trip northward, visiting the cathedral towns of York, and Durham and also Newcastle on Tyne, Edinburgh, did the Trossacks, and from Loch Lomond went to Glasgow. The weather being disagreeable he took a trip across to Oban and back to London.

FOR THE CORONATION PROCEEDINGS.

His Honor was favored with a ticket to the Abbey, and like others who were similarly fortunate unforseen circumstances so well known, they missed a chance in a lifetime. The rest of his time in the Old Country was spent in the rural districts of England. He visited Oxford, Cambridge, and attended the Henley regatta, which he enjoyed immensely. MAGNIFICENTLY ENTERTAINED.

His Honor says that the people of London set right to work to entertain the colonials and right royally did they succeed. It was one grand round of afternoon and evening receptions, which included a party given at St. James palace by the Prince and Princess of Wales on behalf of the King. It was the same in effect as if held by the King, and was a most gorgeous function.

When asked by the Transcript how the unexpected announcement of the King's illness was taken by the populace, Judge Wells said, the reports of rioting drunken brawls, etc., published in the press were without the slightest foundation. There was a marked suppression of the noise and brawling on the streets. General sympathy was shown for His Majesty and the Royal family and those who had made all arrangements for attending the coronation accepted the

INEVITABLE WITHOUT A MURMUR

While in London His Honor stayed at Hotel Cecil and registered at this hotel were Premier Laurier, Premier Sheeldon of New Zealand, Minister of Finance Hon. W. S. Fielding and Comptroller of Customs, Hon. Mr. Patterson. Judge Wells says that Premier Laurier was given a most flattering reception everywhere he went and among the colonials he was the lion of the hour. On the 1st of July the Colonial Club gave a banquet and the British Empire League also gave a similar event, and on a subsequent occasion Premier Laurier in recognition of the hospitality extended the Canadians also gave a banquet which was a magnificent affair.

RECEPTIONS WITHOUT NUMBER.

His Honor had the extreme honor of attending numerous functions. He dined at a reception at Lady Smith's in honor of the Duchess of Albany and her daughter, Princess Alice, who is considered the most beautiful woman of Royal blood in the Old Country. There were present Lord and Lady Seymour, Lord and Lady Tweedmouth, Lord and Lady Jersey, Countess of Warwick, Duke and Duchess of Marlboro, and distinguished personages. After dinner a reception was given at which Lord Kitchener was presented. Judge Wells had the pleasure of an introduction to the hero of South Africa and the latter spoke very highly of the colonial troops. Lord Kitchener, remarked His Honor, is most affable and genial conversationalist and is altogether different from what he is represented. At this reception there were Premier Laurier, Sir Charles Tupper and ministers of the crown.

ANOTHER ENJOYABLE EVENT

was a dinner given by Lord Strathcona it was a grand reception and which His Honor attended and he also received a invitation to a garden party at Newnorth, Lord Strathcona's country residence for July 26th, but could not attend as he had made arrangements to sail two days previous. His Honor also attended a reception given by Lord Strathcona at Hatfield house, his stately residence. There were present the premier of Nova Scotia and New Brunswick and ministers of the Dominion government. But the colonials were invited to a very grand reception held and there was an end to them. One of particular note was a garden party given by Lord and Lady Aberdeen at Kingston-on-Thames. The people of London made it a special business to entertain and Judge Wells was profuse in his commendations of their hospitality.

JUDGE McDONALD,

of Charlottetown, P.E.I., who returned on the Parisian with Judge Wells and who was in the city today en route home, had an equally pleasant trip. He left Charlottetown on May 5th and went over on the Parisian with the contingent. He left ship at Mobile and took a trip through Ireland and went from Giant's causeway to the Lakes of Killarney and from there to London, and participated of the coronation festivities that were going on. He had the pleasure of attending several of the functions. From London he went to Paris where he spent a week; came back to London and proceeded to Scotland. From Glasgow he went by water to Inverness, through Crinn canal to Oban, and proceeded to Edinburgh. He passed the Trossacks and Loch Lomond back to Glasgow and to Liverpool, sailing on the Parisian.

Both Judge Wells and Judge McDonald speak very highly of the captain and officers of the good ship Parisian.—Transcript.

Aug. 4—Sch. Janette, William Long, Summerside, lumber; sch. M. C. McLean, John Jaimeau, Summerside, lumber.

Aug. 5—H. Irving, Charlottetown, lumber.

ELECTRICAL LEAKAGE.

One of the Great Dangers Which Threaten Men.

The greatest dangers which threaten man are generally invisible to the victim, and among these none is more productive of disastrous consequences than "electrical leakage," the selfsame leakage used by the natives of all hot climates to lower their temperatures. As no organic function can take place except by means of electrical currents, so it can be easily understood that if these currents leak from our bodies the loss of power must be distinctly harmful. A common instance of this loss of electricity from our bodies consists of what we call a nervous shock, the scientific explanation being that a sudden egress of electricity takes place owing to the violent mental impressions involuntarily forcing a current of power through channels which had not been previously open to receive them.

"This," remarked a scientist, "is but one case among a thousand of the ways in which we uselessly expend our vital power. The electrical waste of a person is entirely due to his surroundings—the seat upon which you sit, the table upon which you write, the floor, the ceiling, the fireplace, the rays and colors of light which surround you, all may be instrumental in absorbing your electricity, to the great detriment of your health. Red or yellow light waves excite electricity within you, blue and violet waves exhaust it, while green waves are practically neutral in their effect.

"The air you breathe places you in direct communication with the walls, windows or hearth of your room; if, owing to the manner in which they are constructed, they place you in electrical communication with the soil on which your house is built, an 'earth return' is formed, and the electricity in man's condenser—the brain—is drawn out of the body. When one stands in the vicinity of a place of electrical exhaustion one ought to face it, as the base of the skull and spine, being the center of the nervous system, are more sensitive to outside influences than is the more covered front of the body. This is why one feels so tired when sitting with one's back to a fire; the flames serve as conductors and extract the force from the exposed nervous centers."

NATURAL HISTORY.

A whale can remain under water for an hour and a half.

A lion in a jungle will jump twenty-five or thirty feet from a standing start.

A horsefly will live for hours after its head has been pulled off. The head of the mosquito hawk will continue eating its victim when separated from the thorax.

Mud wasps manifest great ingenuity not only in building their nests, but in placing them in localities where they will not be injured by rain or predatory animals.

The gray buzzard is said to be the heaviest bird that flies, the young males when food is plentiful weighing nearly forty pounds. The bird is nearly extinct.

The wasp, like the bee and almost every other insect, is infested with parasites. Wasps have been captured which had two or three dozen parasites clinging to their bodies.

The alligator never leaves fresh water, while the crocodile often goes to sea and in the West Indies has sometimes been found many miles from land, heading directly for an island, possibly out of sight.

Early Explanation.

"And she married Jagers, did she? Well, well! How on earth did that come about?"

"So far as I can learn, it is owing to a mutual misunderstanding."

Why an East Wind Affects Some.

The discomfort acutely felt by some persons during east winds probably arises from the poison that ought to have been got rid of by the skin, but owing to the closing of the pores has been thrown back into the system.

MONCTON HIGH SCHOOL ENTRANCE EXAMINATION.

LIST OF SUCCESSFUL PUPILS.—MISS CLAIR FLANAGAN TAKES THE GOVERNOR-GENERAL'S MEDAL.

At the High School Entrance examinations held in June last in Aberdeen, High School building, Miss Clair Flanagan, of Wesley Street School obtained the highest marks, obtaining 859 out of a possible 1050. She is therefore, the winner of the Governor General's medal. Miss Ida McKay, of Victoria School, stood second, obtaining 740 marks.

Division I—Clair Flanagan, Ida McKay, Alvin Lager, Michael Gillespie, Charlie Barton, Charlie Killam, Edward Robb, Annie Wilson, Maggie Davidson, Marjorie Bell.
