And Worthumberland, Ment, Gloucester, and Restigouche Schediasma.

Nec aranearum sane textus ideo melior, quia ex se fila gignunt, nec noster vilior quia ex alienis libamus ut apes.

Thes much do these ancient remains fur-Thes much do these ancient remains fur-nish us, as to the condition and character of the people who erected them. I have per-suaded myself that I have gleaned from them, also, some pteresting facts in their history. Is may, however, be proper first to remark, that the solitary recorded fact to which I have al-laded to anniha us to datemine their altimation

the middle of the seventh century. An Ame-rican author, the Rt. Rev. Bishop Madison, of Virginia, having with much labor investigated again to the works they have left us to gain what knowledge we can of the cause and manner of their leaving the Obio valley. For the reasons formerly stated, I assume the fact that they were compelled to fly from a more numerous or more gallant people. No doubt the contropy so long their residence was not absordened to their rivals until their num-bers were too much reduced to continue the more numerous or mere gallant people. No denot the contest was long and bloody, and that the country so long their residence was not abardoned to their rivals until their num-bers were too much reduced to continue the contest. Taking into consideration all the circumstances which can be collected from the works they have left on the ground, I have come to the conclusion that these people were assailed both from their northern and southern Frontier; made to recede from both directions, and that their last efforts at re-sistance were made on the Obio. I have adopted this opinion from the character of their adopted this opinion from the character of their both it and the circle were completely com-manded by the mound, rendering it an easier matter to take, than defend it. The engi-naers, on the contrary, who directed the exe-cution of the Miami work, appear to have known the importance of flank defences. And if their business are not as perfect, as to form as these which are in use in Ducker engineers.

tives. Whatever might be their object in adopting the former, whether, like the Trojan remnant, to seek another country, ' and haps pier walls,' or like that of Ithome, to procure present safety and renovated strength, for a distant day of vengeance we have no means of ascertaining. But there is every reason to believe, that they were the founders of a great believe, that they were the founders of a great empire, and that, ages before they assumed the more modern and distinguished name of Mexicans, the Astecks had lost, in the more mild and uniform climate of Anahuac, all re-membrance of the banks of the Ohio. But, whatever may have been their fate, cur pe-caliar interest in them ceases after their de-parture from the Mismi. In relation to their conquerors, I have little to say, and, perhaps that little not very satisfactory. Although I deny the occupation of the banks of the Ohio for centuries before their discoveries by the Europeans, I think that there are indubitable marks of their being thickly inhabited by a race of men, inferior to the authors of the great works we have been considering, after the departure of the latter. Upon many places the departure of the latter. Upon many places remains of pottery, pipes, stone hatchets, and other articles, are found in great abandance, which are evidently of inferior workmanship to those of the former people. But I have ene other fact to offer, which furnishes still batter evidence of my spice.

Number 13.

were drawn, was almost endless, and, as I have said, almost covered the plain. Many, adopted this opinion from the character of their works, which are there found, from those in the interior. Great isome of the latter are, and laborious as was the construction, par-ticularly those of Circleville and Newark, I am persuaded they were never intended for military defences. On the contrary, those upon the Ohio River were svidently designed for that purpose. The three that I have exam-ined, those of Marietta, Eincinnatt, and the mouth of the Great Miami, particularly the latter, have a military character stamped upon thor which cannot be mistaken. The latter work, and that of Circleville, never could have been serected by the same people, if intended for military purposes. The square, at the latter place, has such a number of gata-ways, as seem intended to facilitate the en-trance of those who would attack it. And both it and the circle were completely com-manded by the mound, rendering it an easier must have been some other cause than the attrition of the rain (for it is a dead level) to bring them down to their then state. That cause I take to have been continued caliva-tion. And as the people who erected them would not themselves destroy works which had cost them so much laboar, the solation of the question can enly be found in the long occu-pancy and caltivation of another people, and the probability is, that that people were the conquerors of the original pessessors. To the question of the fact of the former, and the cause of no recert vestige of settlements being found on the Ohio, I can effer only a conjec-ture; but one which appears to me to be far from improbable. Since the first settlement of the Ohio by the whites, they have been visi-ted by two unusually destructive freshets, one in 1793, and the other in 1832. The latter was from five to seven feet higher than the former. The latter was produced by a simple known the imperiance of the position as well as that of the Ohio by the whites, they have been visi-form, as hose which are in use in modern en-gineering, their position as well as that of the long line: of curtains are precisely as they should be I have another conjecture as to this Miani fortress If the people of whom we have been speaking were really the As-tecks, the direct course of their journey to Mexico, and the facilities which that mode of retreat would afford, seem to peint out a de-

THE GLEANER.

The following Extract is taken from a highly

York New World: It is somewhat remarkable that Ohio, ad-mitted into the Union before either of the Northwestern States, so far ahead of either in peint of population, and having its position precisely intermediate between them and the European colonies, from whence the emirst

3rd. tien to all of them came, should have been the last that was settled. Fully-five years age, there was not a Chris-tian inhabitant within the beands which now compose the state of Ohio. And if, a few years anterior to that period, a travaller had been passing down the magnificent river which forms our southern boundary, he might nat have seen in its whele course of eleven handred miles a single human being—certaily net a habitation nor the vestige of one, calca-lated for the residence of man. He might, indeed, have seen indications that it was not always thus. His eye might have rested upen some stapendous mound, er lengthened lines of ramparts, and traverses of earth still of con-siderable elevation, which proved that the

London, February 27, 1839. (Copy), Wherever Mr P. Taylor commences the practize of his Profession, my best wishes will attend him, as I am convinced from the talent and abilities which he displayed at his examination for the Diploma of the Coilege, he will deserve all the success he may obtain. ASTLEY COOPER, London, February 27, 1839. the history and character of this ancient and nameless people. And although the result of such an examination may be far from satis-factery, it will not be entirely barren of infor-mation. We learn first, from the extensive country covered by their remains, that they were a numerous people. Secondly, that they were congregated in considerable cities, form the extensive works with which several favorite situations are covered. Thirdly, that

they were essentially an agricultural people; because, collected as they were in great num-bers, they could have depended upon the chase but for a small portion of their subsis-tence; and there is no reason to believe that they were in percent of the subsisthey were in possession of domestic animals, as the only one known to the American coninent before the arrival of the Europeans, had so long inhabited. The interest (the Lama of Peru,) was unsaited by nature to endure the rigors of a winter in this latitude. The impossibility of assigning any other purpose to which the greatest number, and many of the largest of these remains, could be applied, together with other appearances scarcely to be misunderstood, confirm the fact that they possessed a national religion; in the celebration of which, all that was pompons, gorgeous, or imposing, that a semi barbarous nation could devise, was brought into occa-sional display. That there were a numerous priesthood, and altars often smoking with hecatombs of victums. These same circum-stances, also indicate, that they had made no inconsiderable programs in the set of building hecatombs of victums. These same circum-stances, also indicate, that they had made no inconsiderable progress in the art of building, and their habitations had been ample and con-venient, if not neat or splendid. Man in every age and nation has provided for his own de-fence against the elements, before he even designates any necessary provided for the worship. designates any pecaliar spot for the worship

This pasition, then, (the lowest which they appear to have fortified on the Ohio,) strong by nature, and improved by the expenditure of great labir, directed by no inconsiderable degree of kill, would be the last hold they would occuy and the scene of their last efforts to retan possession of the country they

which

every oue fiels who visits this beautiful and commandiu; spat, would be greatly heightened if he could prsuade himself of the reasonableness of mydeductions, from the facts I have stated. That this elevated ridge, from which are now to be seen flourishing villages, and plains of univalled fertility, possessed by a people in the fall enjoyment of peace and li-berty, and all that peace and liberty can give, whose marens, like those of Sparta, have rever seen the smoke of an enemy's fire, once presented a scene of war, and war in its most horrid forn, where blood is the object, and

be ascertained, the extent of surface which was subjected to it, and his conclusion was, that the height of the water at Cincinnati did net account, after allowing for evaporation, &c. for all the water that fell. In other words, that with the same fall of rain, other circumstances concurring, the freshet might have been some feet higher.

Now, these causes might have been com bined at another time to peur the waters of the tributary streams into the main trunk more nearly together, and thus produce a height of water equal to that described by an Indian Chief (te which he said he was an eye-wit-uess,) to General Wilkinson, at Cincinnati, in nees.) to content which son, at Cincinnali, in the fall of 1792; and which, if true, must have been several feet, (eight or ten.) at least, higher than that of 1832. The occurrence of such a flood, when the banks of the Ohio were occupied by numerous Indian towns and villages, nearly all of which must have been swept off, was well calculated to determine the deficiences of the field made up by the them to a removal, not only from actual suffer-slaughter of innocence and imbecility. That ing, but from the suggestions of superstition; an with fortitide, and sustained with valor, need sual resort for game, and a common hanting
