zeal of the old Puritans. It would be well, if zaal of the old Puritans. It would be well, if in some things, we could catch their spirit; did we do so, that fixity of determination and indomitable perseverance which characterised them would not be waating in us. It is true that as a body, we labor under decided disad-vantages; yet some of the world's truest and greatest heroes have sprung from our ranks: they have baffled and conquered difficultiesleft as an imperishable example and a name, which serve to animate us to renewed efforts, undaunted faith and hope.

1 .

The study of History 18, perhaps, one of the mest interesting within the range of man. It is a study which opens a field in which speculation and fancy may luxuriate, and a study which will well repay those who pursue it .--It is our object, in the present paper, succinctly and briefly to point out its vast importance as a study, and to suggest the principles which should be recognized in parsuing it.

For all that we know of the past, for all that we know of the men who formerly peopled this globe, of the nations which they founded, of what they achieved and suffered, we are indebted to history. History 18, in fact, the exhibition of humanity—the chronicle of its progress—the unfolding of the principles which have made it what it is ; it needs little expor-tion to develop its purport, and equally as lit-tle argument to enforce its study. It must be apparent that the materials which history affords are the only basis upon which philosophi-cal investigation can rest, and from which principles can be deduced ; its magnitude, its mighty influence, its class, as the first of all studies, no one has attempted to dispute; all studies, no one has attempted to uspute; all have conseded that, in importance, it is in-comparably great; that insemuch as it is a mighty stimulus to thought and action, com-bining this, as it does, with other valuable con-comitant advantages, even the most utilitarian have pronounced it a study, practical and beneficial in its results.

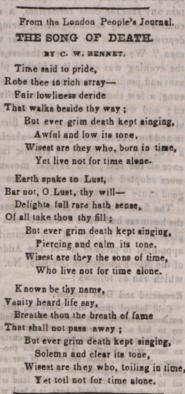

It is by no means an uncommon occurrence It is by no means an uncommon occurrence to meet with men who pride themselves on their knowledge of history — men who are en-abled to tell you, fully and concisely, all the pricipal events in the history of our own and other countries—who could give you, if need-ful, in chronological order, the names of their monarchs and their queens—who could make you stand achest with a fearfal array of dots monarchs and their queens—who could make you stand aghast with a fearfal array of dates and obsolete occurrences—who could give you the ramified genealogy of the aristocracies and leading men of all countries—and who, in short, could give you an epitome of the world's history; this is done, and by individuals who have nover correctly comprehended or studied history. The cramming with facts is compar-atively an easy task; it takes little to make a man a perfect Encyclopædia, but what, it may be asked, is the use of it ? What is the use of it, if a man cannot deduce inferences from it, if a man cannot deduce inferences from the facts, if those facts do not teach him great and important lessons-do not give him higher and sublimer views of existence-more loity conceptious of life, and a more intimate acquaintance with the finite beings by whom he is surrounded ? It he does not deduce some is affounded 1 if he does not deduce some great principles from the facts, if they cause him po trais of thought, if they leave him as dull and misanthrophic as they found him, bet-ter had he not accumulated facts at all—it is a mere wearisome task, returning neither profit nor pleasure ; unmeaning and aimless ; alike prijudicial to the individual purening it, and all whom he may chance to make the gratui-tous recipients of his lots. But we still sup-pose the case of an individual to whom the main purport, scope, and aim of history is not untamiliar; who, taking history in its most comprehensive sense, as a record of what map has done and effected; such an one goes to the study of history with a hearty zest; he takes the history of the world, not as the his-tory of mogarche, potentate, and senter hu: takes the history of the world, not as the his-tory of momenta, potentates, and senates, but as the history of man; he overlooks the mere-tricious pomp in which the great and the mighty of all time have entre-bad themselves: and while he ponders battles, and all their con-comitant horrors, he does not overlook what the people—the common people—were at. To him it is a pleasure to trace their gradual de-velopment : to trace the rise and progess of the arts and sciences amongst them; to note the obstacles which they had to battle : the forms of government which most favored their growth : the effect of priesteralt and religious growth : the effect of priesteralt and religious systems noon them ; the influence excited by poetry and the fine arts. Before him he has spread the great history of haman minds ; it is actrate th mysteries and solve the problems and the questions which that tertile history affords him. The great questions which agitate the present age, the theories which agitate the present age, the theories whick are aloft respecting the eleva tion and the enfanchisement of the masses, are questions which historical experience bles him satisfactorily to solve. It is, too, from the deliberate and systematic study of history that he derives his conceptions of the keroie It is in history that he meets with a multiplicity of characters and actions ; he see jarting and conflicting interests at work ; he res the warrior's mighty arm committing most foul atrocities ; he sees the poet exerting his mild and benign influence ; he sees the philosopher engaged in teaching and directing the thoughts of his fellow men; and, in short, all the variety of actions and pursuits of which humanity is susceptible. He brings to bear upon all these bia standard of morality. He dors not pass over such names as Alexander. Hannibal, Cæsar, without allowing himself ample scope for comparison, reflexion and judgement. He can place the names of such men as these in juxtaposition with those of the philosophers and the poets, deduce his n-loel himself in a position to decide whether

" They should rest forgot with mighty tyrants gone, Their statues mouldered and their names un-

known.

Agains in studying history, he has astound-ing revelations given him of the nature and power of the human mind-what it has achiev. ed, and what it is yet destined to effect. He can recognise in that the highest and the mightiest power in creation, and learn that according as the mind of a people is constitu-ted, so will be their institutions and their coun-Misanthrophic feelings or illiberal prejudices are incompatible with such a study as this: it must easile all who pursue it to con-temn and despise intolerance and bigotry wherever they find it; giving an increased wherever they find it; giving an increased knowledge of human nature, with a know-ledge, sloo of its rights and its aime. It ena-bles all of us not only to recognise, but to hold dear, the principles of the brotherhood and common amenability of the human race.

In conclusion, we would urge all to pursue it philosophically, and with an aim in view ; to test, if necessary, the truth of its statements to search out effects and their causes ; to endeavor to ascertain the motives inducing ac-tions : but to acquire the nabit of impartial judgment; to sympathuse with the magnanimous and the virtuous; to enable themselves to identify the 'form and pressure' of various ages; to treasure up great principles and truths; and to mark the hand of Him who overroleth all things. Study History in this way, and we feel assured none will regret it; it will enhance respect for humanity-give a greater stimulus-induce a devotion to the great purposes of life-give a higher sense of its vastness and its importance, exciting an enthusiastic desire to aid the progress and fur-ther the civilisation of the world.

#### A LEAP FOR LIFE.

As the Supervisor of inland revenue at Aberystwith, Mr J. Miller, his nephew, and two berystwith, Mr J. Siller, his schew, and two professional gentlemen, geologists, were in the month of July last, examining some strata of reck is the cliffs between Aberystwith and Llanrhystid, they proceeded along a narrow ledge of projecting stone on the face of the cliff, about 126 feet above the level of the sea, which providentially happened to be at full flow. In passing round a projecting angle, which, 'for ages has frowned on all below,' the professors and the revenue officer had roonded the point, and the voung men was in the act of doing so, when the rock suddenly break-ing from under his fact, he was whirled round with his face towards the sea, and as he descended, he seized with one hand the ledge be-neath his uncle's fect, whilst he extended the other hand to him, and it was firmly clasped by the revenue officer, who held him suspend-ed for full five minutes, during which time ne with great difficulty maintained his position, there not being more than six inches to stand upon. At leng h a breathless pause ensued, whilet Mr Miller gezed upon a rugged projec-tion of rock about 96 feet below them, and on which he concluded the unfortunate youth was inevitably doomed to be dashed. But the uncle (who calls himself an awful coward) at length said, with all the calmaces imaginable, om, there is but one way for it ; Pill sav yeu, or we will both perish together,' and with firm voice, he commanded the young man to loose his hold of the rock, which was me chanically obeyed, with a faint reply, 'Yes, uncle.' At this awful moment Mr Miller horizontally sprung into the air, carrying the young with bim; and such was the force which he leaped, that the check caused them to perform several somersets over each other as they descended linked together. With the rapidity of a bash of lightning, they disappeared beneath the toaming billows, having cleared the craggy ledge, which projected more than six feet from the perpendicular of the point over which the youth was suspended. To the delight of their companions, who were momentarily horrorstruck, they rose about 20 yarda apart, buffetting the heavy swells of the flowing and returning waves; at length they struck out for a rock that lay about seventy

yards in the sea, on which they were shortly seated, and from which they gave three hearty cheers. Their companions attempted to procure their rescue by obtaining a boat, but, ow-ing to the breach in the ledge, found it imposthe to the scatter in the ledge, such it impos-eible, and had to proceed onwards for three hours before they were able to extricute themselves. To their delight, the geologists then found that their brave and dauntiess com-panions had once more committed themselves to the deep, had swam to an accessible part of the caff, and returned to Llanrhystid, where with the accession of the target the second with the exception of the loss of hats, the of-ficer's boots (which he had taken off on first starting on the ledge) and a tew slight bruises, they appeared not a whit the worse for they perilous adventure.

# PATHOS.

When one comes across a charming little when one comes across a charming little bit of pathos, says the Picayone, wrought up in smooth flowing rhyme, it pleasantly excites all the better feelings of the heart. We find in the Boston Post the following towching little affair:-

SHE NEVER SMILLS.

She never smiles, no happy thought 32 red Lights up her pensive eye:

The merry laugh from lip to lip, Passes unneeded by. anought said shid

Frozen forever in her heart, The sparkling fount of gladness;

And o'er it pours a rapid flood, The ebon wave of sadness.

She never smiles-as frowning grief With his stern magic bound hert

Has care her long lean fingers raised, To cast her fetters round her;

Has one so young the lesson learned That love is oft betrayed?

Ab no, she never smiles because-Her front teeth are decayed!

THE NEWSPAPER PRESS.

Nor, while speaking of the Schoolmasters, in whose hands the Frinting Press is such a powerful agent of public instruction at the pre-sent time, must we forget the Newspapers of Grest Britain. Whether we regard them as the guide or echo of popular opinion, and in some sort they partake of both characters, we some sort they partake of both characters, we are lost in amazement and admiration at the quantity and quality of mind, and that of the highest order, now to be found in the columns of the daily, weekly, and provincial press. From being a mere chronicle of passing events, a dry register of dates and facts, the newspa-per has grown into one of the leading school-masters of the day. Its articles amuse us with their wit and instruct us with their windom. their wit, and instruct us with their wisdom. They exhibit the wisdom of the classical scholar, and the close reasoning of the logician. It is an encyclopedia in uselt. It reviews all books, and treats of all science. It is familtar with all Geography, and at home in all history. It is the Œdipus to read the riddles which every political Sphinx may set before. It dives into Cabinet secrets, and anticipates the purposes of Statesmen. It has the hundred eyes of the ever wakeful Argus, the hundred hands and fifty heads of Briarcus. And as omnipresent, as omniseient, as ubiquitons, as versatile, it is bere, there, and everywhere, from the Indus to the Po, from China to Peru, com-passing the world with its correspondents, and with its expresses, and the electric telegraph, racing against time to communicate its intelli-The ancients counted up seven wonders of the world. If they had possessed a newspaper press like that of England, they would have had an eighth, more marvellous, and more worth than all the rest together

#### SCIENCE.

In the granite quarries near Seringapatam, the most enormous blocks are separated from the solid rock by the following neat and simthe solid rock by the following heat and sim-ple process.—The workmen having found a portion of the rock sufficiently extensive, and situated near the edge of the part already quarried, lay bare the upper surface, and it a line in the direction of the inmark on tended separation, along which a groove is cut with a chissel, about a couple of inches in depth, above this groove a narrow line of fire is kindled, and this is maintained till the rock is thoroughly heated, immediately on which a line of men and women, each provided with a pot of cold water, suddenly sweep aff the ashes, and pour the water into the heated groove, when the rock at once splits with a cleau fracture. Bome square blocks of six in the side, and upwards of eighty feet feet in length, are sometimes detached by this me. Hardly less simple and efficacious is thod. the process used in some parts of Francewhere mill-stones are made; when a mass sufficiently large is found, it is cut into a round form several teet high, and the question then arises-how to divide this into pieces of a proper size for mill-stones; for this purpose grooves are chisseled out, at distances corresponding to the thickness intended to be given to the mill stones, into which grooves wedg-es of dried wood are driven; these wedges are then wetted, or exposed to the night dew, and next morning the block of stone is found separated into pieces of proper size for millstones, merely by the expansion of the wood consequent upon the apsorption of the raid; an irresistible natural power accomplishing, almost without any trouble, and at no ex-pense, an operation which from the peculiar hardness and texture of the stone, would oth-

erwise be impracticable but by the most powerful machinery, or the most persevering and tircsome labour.

## SINGULAR PROPHECY.

At a meeting of the institute of Actuaries, held in London a few days eince, Mr Nelson referred to a prophecy, made in 1529, by their newly elected president, Mr Finlayson. Many years ago their president prophesied that in 1849 Europe would be in a state of com-motion. He need not tell them how fully his prophecy had been verified. Mr Finlayson in reference to this said, 'He had no wish te be considered a prophet, but the circumstances actually took place. He merely arrived at the opinion he had given by calculation, is a committee which sat in 1929, on the subject of friendly societies, before whom he was enamined as to the probable rates of interest on an average of many years henceforth. He (the president) answered that the rate on a medium of peace and war would range at four per cent; on which Lord Althorp asked if he allowed nothing for the increase of philanthro-py, believing firmly that the state of peace was itself nothing else but a state of incapacity to make war. The committee seemed aston-ished at this doctrine, and one of them (Mr Pasey) asked was war the natural state of man? He answered that all his history showed that the number of years of peace and war, from any given era, was precisely equal and not only so, but that the duration of each suoceeding peace was in exact proportion to the sacrifices of the antecedent war, and when the exhaustion so occasioned is repaired war will immediately follow. On this dictum, he and his son completed

On this dictum, he and his son completed from many elements, an estimate of the ex-haustion which Europe had sustained in the 25 years of war which ended in 1816, and he confidently predicted that the peace of the world would not be disturbed by any great commotions until after the year 1847. Many or most to his literary friends have been aware of his prediction for at least 15 years or more. He regretted to find the result he anticipated had occurred."

## From Aogg's Instructor. LVING TO CHILDREN.

The Rev. Robert Hall had so great an avera sion to every species of falsehood and evasion, that he sometimes expressed himself very etrongly on the subject. The following is an instance, stated in his life by Dr. Gregory : Once which he was spensing an evening at the house of a friend, a lady, who was there on a visit, retired, that her lutle girl a child of four years old might go to bed She returned in years old might go to bed She returned in about half an hour, and said to a lady near her, " She is gone to sleep; I put on my night cap, and lay down by her, and she soon drop-ped off." Mr Hall who everheard this, said, ped on. Mr Hall who everheard this, said, 'Excuse me, madam; do you wish your child to grow up a liar?', Oh denr. no sir, I should be shocked at such a thing.' Then bear with me while I say, you must never act a he before her; children are very quick ob-servers, and soon learn that that which as-sumes to be what it is not is a his state. sumes to be what it is not, is a lie, whether acted or spoken.<sup>2</sup> This was uttered with a kindness which precluded offence, yet with a seriousness that could not be forgetten.

## DIAMOND AND PASTE.

\*Really, my dear,' said Mr Jones to his better half, ' yon have sadly deceived me. I once considered you a *jewel* of a womon, but you've tarned ont only a bit of matrimonial paste.'

"Then, my love,' was the reply, ' console yourself with the idea that it is very adhesive, and I'll stick to you as long as I live."—Spirit of the Times.

### ABSENCE OF MIND.

In the Dublin University Magazine, we have a biographical sketch of Peter Burrows, the celebrated batriater, and smoong the per-sonal anecdotes told is the following:

A friend called upon him one morning in his dressing room, and found him shaving, his face to the wall He asked him why he chose so so strange an attitude. The suswer was—' to hok in the close.

look in the glass.' "Why,' said his friend, ' there is no glass

there ! "Bless my soul.' cried Burrows, "I did not notice that before !"

Ringing the bell he called the servant, and questioned him respecting his looking glass. • Oh, sir, said the servant, \* the mistress had

it removed six weeks ago. A gentleman who frequented a circas, noticed a boy among the audience who happen-ed to be asleep every time he came in. Cari-

ous to know why the urchin should resort to such a place for somniferous purposes, our friend went up one evening and accosted

My little fellow what do you go to sleep for?

· I can't keep awake,' rejoined the other: ' It's a terrible thing to see them doing the same thing every night.'

But why do you come?' asked the gentleman again.

'Oh, I can't help it—I must come—Pro got a season ticket !'

WHAT & HAPPY MAN HE MUST BE .-- The "Moraing Post' says that in a monastery of the Levant there is a monk, thirty five years of age, who has never seen a womas !

apon rkers stiops earted
