He created such ground that human nature is always on the side of the weak when in resist-loted—twenty minutes in his case—all ance to the strong; and in no country in the world is this manifestation more the desk, would not have been heard by pronounced than it is in the United States. the vast assemblage—counted for nothing. as, for example, during the Canadian rebel- Chairman and all, in fact, took no heed of lion in 1837 and the Irish escapade in 1847, time, but allowed, nay compelled, the when public meetings were called in all speaker to keep on. Instead of speaking parts of the country and resolutions passed, supported by some of the leading public whole hour, and even then had some men, against England and for the encour- difficulty in being allowed to stop. After agement of the malcontents. All this was the meeting was over, several persons, quite natural, if not justifiable. There- which soon became a little crowd, went up fore it should be considered in all such to Howe, with delight beaming on their cases, that what is sauce for the goose countenances, to get further information should be allowed to be the right sort of about this Eldorado, Nova Scotia, whose

in existence for many years, and has proved to be a nursery for eminent statesmen and lawyers who have resorted hither to try their prentice hand at public speaking, and it has always been attended by the first people in the land-its proceedings are conducted with the strictest parliamentary decorum, and here some of the finest and most brilliant speaking is to be heard, and yet the speakers may be unknown as the name is given under a pseudom when the chairman's eye is caught. When our Colonial triends entered the hall of this intellectual gathering, over a thousand persons being present, the subject of the evening's discussion was the President's Message fust delivered to Congress—an important topic at the time as England secured a considerable share of attention in said message growing out of the civil war, although the message was of a pacific character. When our friends entered there was a tall, lank Georgian upon his feet declaiming bitterly against the South, (probably he was then a resident in the North) and he was immediately followed by a Connecticut Editor who was death upon the slave-holder and the effete citizens of the South whose lives were spent in idleness and debauchery, a wretched lot the whole of them, residing South of Dixon's line. No doubt our l Editor was under the impression that he was pouring out his talents on a sympathetic audience, since "slavery" was the principal plank he used in his platform. As soon as the last gentleman finished, Howe sprang to his feet, caught the Chairman's eye and went ahead on the side of in that direction, but rather Northwardsas it was a sort of free lance, however, a man was at liberty to argue against his own convictions, ad capitandum, and so our hero improved the occasion in his own off-hand, nonchalent way, to the delight of his audience. Everybody was amazed at the speaker's powers, his minute knowledge of the subject under discussion, his mastery of language, his oratory-in short all telt that England's greatest man had the floor, but who that man could be was the great puzzle to them all. The arguments of the poor Georgian and Editor were turn-

new pattern, and of great historic value, as they were used by the antedeluvians when coming out of the ark." Then, again. "here is a lot of old iron, the remnants of a Bankrupt Estate, the irony of fate had a good deal to do with the articles getting into my hands. Here you have tongs, shovels, old scraps, nick-nacks, and here is the remains of a big grid-iron of great historic value, as it was used in the Masonic lodge for a great number of years, and is capable of broiling anything, from a Free Mason to a tough beef steak."

WHY ANIMALS ARE DUMB.

A Curious Tradition of the Indians Offers an Explanation.

The American Indians, especially those of the lake regions of Southern Canada, relate a curious tradition to account for the fact that all lower animals are dumb. In very, very early times, they say, the father of all tribes lived in a beautiful country over against the rising sun. His form was perfect and his face handsome in the extreme, his descendants being all superb specimens of humanity. Knowing of their accomplishments and being much given to flattering each other, they became very haughty and arrogant. a punishment for their bigotry. the Great Father warned the father of the tribes in a dream that a deluge would be sent to drown them from off the face of the earth. In the dream which forewarned the father of the tribes of the great calamity impending, there was presented to his visionary view the form and outlines of a raft, which was to be used in saving a remnant of this bigoted people. In those days all animals talked as men do; and, when the father of the tribes informed the beasts of the field of his dream, and of his intentions concerning the building of the great ratt, they protested, declaring their unwillingness to accompany him on any such

But the man's superior intelligence prevailed. He built the raft, and lo! had hardly finished when the great flood came. The man's family and pairs of every beast took passage and floated for many months on the surface of the deluge. The clouds cleared away on the second day after the embarkation, and for seventeen successive moons the man used the sun as a guide, continually steering towards his place of

The animals, however, every one of them to the west, declaring in one voice that they preferred steering towards the sun's risingplace. These murmurs had been going on for some days when, to the infinite joy of Catherine of Russia. the man, who had been holding the fort Finally this rudely-constructed ark grounded, and the man and his family and the beasts were again permitted to press the tace of the earth with their feet.

But a great and lasting calamity had overtaken the animals. For their murmurs against the man while on the water they were deprived of the power of speech, and have remained dumb from that day.

The Origin of Leap Year.

Spinsters who long for a gude man at your ain ingle-cheek, your chance has come again! Leap year has dawned and the great privilege of la femme propose is once Bruce.—Detroit Free Press. more yours. This eventful period, as every maiden knows, occurs every fourth year, and in it the gentler sex can assert their woman's right to propose for the hand of the hesitating lover, and if their suit be rejected, can claim a silk dress. (For the prices of the latter, confirmed bachelors are referred to our advertising columns.) the frogs out of the bogs," was walking Shortly after this he was asked by an along the shores of Lough Neagh, when streaming down her sweet face, told him that a mutiny had broken out in the nun-"Think of him," was the reply; "there | nery of which she was Superior, the ladies by telling her that he would concede the ladies the right, on condition that it be only exercised and exclaimed, "Arrah, Pathrick, jewel, I daurn't go back to the girls wid such a proposal!" St. Patrick replied, "Bridget, acushla, squaze me that way agin an' I'll give ye leap year, the longest o' the lot." St. Bridget took him at his word, "squazed," and popped the question to St. Patrick himself, who, of course, could not marry by giving St. Bridget a kiss and a silk gown. Something About Siberia.

Siberia is not the semi-arctic, barren province which it has usually appeared to the popular imagination, nor is its population composed only of exiles, soldiers, officials, and some half-wild aborigines. It is really a continent in itself. with many diversities of climate, scenery, and vegetation.

It is a continent stretching over thirtyseven degrees, or two thousand five hundred miles of latitude, and one hundred and thirty degrees or five thousand miles of

It 'could take in the whole area of the United States from Maine to California, and from Lake Superior to the Gulf of Mexico, and still have room for the part of

Of course a land of such extent must have great diversity of climate as well as of scenery and physical characteristics.

There is, for instance, the great northern belt of tundras, or frozen steppes, extending along the Arctic sea-coast from Novaya Zemlaya to Behring's Straits.

Then there is the forrest region, a belt which stretches across the middle of the continent from the Ural Mountains to the

Lastly, there is the fertile region, which extends from Ekaterinburg to the Pacific along the frontiers of the Central Asian khanates and of Mongolia.

Mark Twain Says: You cannot tell by the size of a frog how

far he will jump. Neither can you tell by the appearance of the Rigby cloth that it is waterproof. But, oh! what a difference in a rain THE FIRST WATCH.

When and by Whom it was Made Seems a Historical Puzzle.

Watches are believed by historians to have been used as early as 1470. The word watch is derived from the Saxon wæccan-to wage; the Swedish vacht, to watch, and the Danish vaght; the English watch has the same meaning, taken, probably, from the watch of the night. The actual name in its earliest days was pocketclock. It was the perfected invention of the horological science of many centuries, and included the sun-dial, the clepsydra or water-clock, the hour or sand-glass, and wheel clock, by actual gradations of experiments and skill.

The ancient German city of Nuremberg claims the invention of the pocket-clock, and it is a fact that these first clumsy watches were from their oval shape called Nuremberg eggs, and that the town was

famous for their production.

A noble Milanese poet alludes to watches in a sonnet written by him in 1494, so that watches had then reached Italy. And that country has endeavored to fasten the triumph of their invention upon a Florentine astronomer, but without success. The Emperor Charles V., of Spain, possessed a watch or, as it was then called, a small table-clock. He amused himself with several of these in his retirement in the monastery of St. Juste. It is said that he could not make them record the time, and one day he broke out in this impatient moral reflection on his past conduct: "What an egregious fool I must have been to have squandered so much blood and treasure in an absurd attempt to make all men think alike when I cannot even make a few watches keep time together."

Watches were introduced into England during the reign of Henry the VIII., who possessed a watch that went for a week. A watch belonging to this monarch was on exhibition in London at the world's tair in

The manufacture of tiny watches, so minute that they could be worn in a ring, is mentioned as early as 1500.

A musical watch now exhibited in the St. Petersburg Acadamy of Science performs a religious chant with scenic accompaniment. It is about the size of an egg. Within it is a representation of Christ with Roman sentinels on watch. On pressing a spring the stone rolls from the tomb, the sentinels fall down, the angels appear, the (who, it will be remembered, had the power of speech), protested against sailing to the most dealer in the same chant which is sung in the Greek church on Easter Eve is actually performed. This watch was invented by an ingenious Russian peasant during the reign of

The early watches had but one hand, against this horde of creatures who had showing the hours. They usually required the voices of men and reason of beasts, winding twice a day. Originally the maingreat spots of dry land began to appear. spring was a straight piece of steel. The invention of the balance spring is credited to Robert Hooke, of London. An inscription on a watch presented to Charles II would seem to establish this. It reads: "Robert Hooke inv't 1658."

Repeating watches were invented by

Barlow in 1676. There are many modern curiosities in the shape of watches, and antique ones appear at frequent intervals which have been heirlooms and kept from the public gaze. Occasionally a clever impostor introduces to the world an antique chronometer with a spurious history. Such was the watch which was said to be a relict of Robert
