their superiors wandering about the streets IT IS A GREAT SYSTEM.

SOME BOSTON WIRES AND HOW THEY DO THEIR WORK.

Interesting Description of How the Patrol Wagon Comes Into Play-The Way to for St. John Officials.

Bosron, Jan. 10 .- When Chief Clark they had a very good time and learned a great deal. One ot the things that interested them most was the fire alarm and police signal service.

Coming from a city where the fire alarm system is very much behind the times, it was quite natural that Ald. Vincent as a member of the fire committee should be interested, whether or not, he was appointed a committee to investigate the subject. And everybody knows that everything which will tend to make the St. John police force a miniature of the Boston department is of vital importance in the estimation of the Chief.

So the visitors spent a great deal of time in getting information, and have probably made the members of the Common Council a great deal wiser regarding the signal service in the fire and police departments of advanced cities.

Boston has always been ready to adopt any new system that proves to be an improve- lockup. ment on the one in use, and as a result, things are done with astonishing rapidity in the police and fire departments.

A few weeks ago I had the pleasure of going through one of the police stations from cellar to roof, and the most interesting part of the visit was the signal room. Here sat an officer before electrical apparatus that was bewildering to the uninitiated, but by means of which he was able to communicate with any policeman on duty in the territory covered by that particular division. Every time a policeman made his report at the patrol box on the beat it was registered at the office by dots and dashes on long strips of paper. Then there was the patrol call, which went to the stable across the street, where, at the first stroke of the bell, the horse left his stall, stood under the harness, and was in the street before you could say Jack Robinson. The telephone was used to communicate

with the police. Chief Clark and Ald. Vincent saw all

in disguise at all times of the night or morning to find out whether they are asleep in the lockup, or warming themselves in somebody's back kitchen.

It will probably take the Common Coun-Rig out a Fire Alarm System-Pointers cil a long time to see the necessity of a patrol waggon, but if it can be run as cheaply as half a dozen miserable little and Ald. Vincent were in Boston, recently, lockups, which any self respecting tramp should be ashamed to wake up in, it would be a much greater convenience, to say nothing of style and nineteenth " century-

> Salem has one patrol waggon, and finds it equal to all requirements. The officers take a prisoner to a box and wait until the waggon comes. They do not have to drag a man half a mile to a lockup, and leave the beat unprotected while they are away. Under the present arrangement in St. John, the burglars who had things so very much their own way last summer, could have disposed of the entire police force, if it had been necessary. But it wasn't necessary

They came and went as they pleased. Suppose, however, that they had found an officer near a house they were particularly anxious to get into, how easily it would have been for one of them to become drunk and abusive, and keep, the officer busy for a good hour or two in dragging him to the

It's the fire alarm that concerns St. John people most, but when you can have the two combined at the same price, the police signal service is worth looking into. And the fire alarm in connection with the Duplex covers the ground.

I think the St. John system has only one circuit, or two at the most, but on one point there is no doubt, once the wire is cut, or anything happens to it, the whole system is ineffective. The Duplex does away with all cause for anxiety on this point. It has what is called the right and left wire, and the alarm can go in on either. Whether or not the wire is cut it makes no difference, the alarm goes in just the same. If it cannot go around one way it goes the other.

Manager Watts of the Metropolitan Duplex tells me that his system could be put in on the old wires in St. John without very great expense, and that Carleton could get world's fair commissioners practically ac-cepted Prentice's offer, and the work was what it has been crying out for, for years- undertaken and successfully carried out. a fire alarm. The system could be made

THE BIGGEST MONOLITH.

Wisconsin's Big Block of Sandstone for the World's Fair.

One of the exhibits of Wisconsin at the world's fair will be a monster monolith, which has just been quarried at Ashland in that state. This monolith will be 115 feet long, 10 feet at the base and 4 feet square at the top. The apex will be about five feet long and will be tapered to about a six-inch tip. The monolith, which is of Lake Superier brown-stone. will rest on a foundation of granite, ten feet high and twelve feet square, and will be one of the wonders of Jackson Park at Chicago. This imposing shaft will be the largest on earth, being nearly ten feet longer than the Egyptian obelisk.

The monolith is the result of a discussion between Frederick Prentice, who owns the quarry from which it was taken and who directed the work of quarrying it, and ex-Gov. Samuel S. Fifield, of Wisconsin. Prentice, in the course of the discussion, declared that he could surpass the largest Egyption productions from his quarries. He offered to deliver such a stone free of

WHAT IS TO BE

A SLAUCHTER IN CLOTHING is pictured here. It is a fit introduction to the present **Slaughter in prices** we are making on our Heavy Winter Clothing. We must make room for Spring Stock. We can mention only a few lines here.

Men's Heavy, Warm Ulsters go at, - - - - \$6.00. Overcoats go at, - - - \$4.00. Melton, Cheviot, Worsted, Beaver and Tweed in all shades. Boys' Cape Coats go off at, ----- \$3.00. "Beefers " ----- \$2.00. Reefers Come at once before your size is gone. Everything marked in plain figures. Remember our goods are all new.

that a sufficient number of fish have entered the last chamber, he gives a signal to draw in the outer nets from the sea and shore to close the outermost chambers, to prevent the fish from escaping to sea. The fish are then killed in the death chamber by means of iron-clad clubs, wielded by the fishermen. During a season the above is repeated front about ten to fitteen times at one and the same place, and as many as six hundred fish have been caught in one season

at Prof. Spencer's Standard Dancing Academy, Market Building, Germain street (entrance South Market street). I make the following offer in prizes to all who wish to learn to dance the best style. Young and old can come. First Prize, \$40.00; Second Prize, \$20.00; Third Prize, \$10.00; Fourth Prize, \$5.00; all in gold, to be guessed for in this way: The number of stamps in a sealed jar. The first, the right number or nearest to it; the next nearest, Second Prize; the next nearest, Third Prize; the next nearest, Fourth Prize. Any one can join the classes, atternoon or evening, by paying a regular term price. Each person or child will get a coupon with number to correspond with number of guess deposited. All who dance in Classes, Assemblies, Balls or Parties of any description, by paying not less than \$2.00 and upwards, whether it includes one or more dances, also anyone hiring Costumes, Wigs, or Whiskers to the amount of \$2.00, will be entitled to a guess, or any one who buys \$2.00 worth of Furniture and upwards, or any articles for sale in my premises; each purchase will entitle the buyer to a guess. The prize list will be

Signal Service Company, and saw a system that went one better. The fact that Salem is about the same size as St. John made the visit of greater interest, for a system that would be all right in Boston, might be too cumbersome and expensive for a Council for an hour or two without every- huge block in its entirety. The complesmaller city.

the very latest in the way of a fire and back him up, with emphasis on the patrol police signal system. It is what is called the Metropolitan duplex, and Mr. H. A. Chase, electrician of the Boston police department is the inventor of it. The fire and police signals are combined, and from a street box of not very formidable proportions, almost any kind of an alarm can be sent

In the first place it is a keyless box. All St. John people will realize the advantage of having a fire alarm box to open which one does not have to run all over town to find a key. For instance, if a fire broke out in the vicinity of PROGRESS office after Mr. Armstrong had closed up his fruit store next door and locked the key of the fire alarm box across the street, in his safe-not one person in a hundred would think of going to the Royal hotel for another key, although PROGRESS has prublished a list of key holders several times. Every minute counts then a fire starts. The St. John fire department can get out and over the ground in fast enough time to suit anybody, when an alarm is given, but it often happens that the man who discovers a fire could run to an engine house and get the department out much more quickly than if he had undertaken to find the key of the neares. box.

The Duplex has an orien space in the door of the box, "thich is protected by thin glass. Round this is a hook, beside which the following directions stand out conspicuously :

"In case of fire, break the glass, pull the

STORIES OF THE "FOUDROYANT."

The Old Warship About Which So Many Incidents Cling.

In view of the fact that the upper deck of the Foudroyant was restored and the ves-

sel otherwise fitted at Swinemundle for being towed across the North Sea, it was wickedly suggested that she might be labelled "Made in Germany." The curious thing about it (writes a Pall Mall Budget correspondent) is that the old ship over which so much trouble has been taken is. after all, French. She was captured from the French, and her captors are very proud of her. When secured she was almost the finest ship in our navy, and quite eclipsed the flagship of her squadron. One of the famous brothers Haldane, who served in her, declared that while on board the admiral's ship he found himselt obliged to stoop between decks-as the visitors to the Naval Exhibition Victory had to do-he was able, though nearly six feet, to walk upright in the Foudroyant. It was, of course, when in command of the Foudroyant that Earl St. Vincent won his first honours, after the capture of Quebec. He commanded the ship in 1778, and later, in 1782, he fought his three-quarters of an hour's duel with the Pegase off Brest. The Frenchman carried a crew of 700 men, and the two ships were pretty equally matched. The fight took place in the dark, and a story is told of the captain's magnanimity during the action. As the ships were about to exchange fire some one called out that the enemy was putting up her helm to rake. Captain Jervis immediately directed that his helm should be put to starboard that that he might give a starboard broadside.

An analysis of the stone Salem has what is admitted to be about ford's fish stories. And the Chief can made by Prof. C. F. Chandler, Ph. D., of the school of mines, Columbia College shows it to be composed as follows : Silica, 91.40; farric oxide, 2.00; alumina, 3.53; lime, .25; magnesia, none; potash, 2.36; lime, .25; magnesia, none; potash, 2.36; the stamps and pay the money to prize soda, .14; sulphnr, none; carbonic acid, holders in Gold Coin,—positively on the none; moisture, .05; a total of 99.75 per date mentioned. All the dances must be cent, and has an average weight of 150 pounds to the cubic foot, and showing a to me. Musical Instruments; last but not compression of strength of 7,491 pounds per square inch.

This Wisconsin production is undoubtedly the largest monolith in the world as claimed, and its proportions are in general conformity with those of the east.

The apex in the typical obelisks of ancient Egypt was sheathed with a bronze cap. The proportions of the thickness to the height is nearly the same in all Egyptian obelisks, that is, between one-ninth and one-tenth. The thickness of the top is never less than halt nor greater than threefourths of the thickness of the base.

These monoliths of Egypt recorded the honors and triumphs of the kings. The two largest were erected by Sesostris at Heliopolis. The height of these was seventyeight feet, and they were removed to Rome by Augustus. Two obelisks in Alexandra. known as Cleopatra's needles, were given by Mehemet Ali to Great Britain and France. The French chose instead the Luxor obelisk, which was erected in the Place de la Concorde in Paris. That chosen by the British was erected in London in 1878. Its height is 68 feet 5 1-12 inches, and its dimensions at the base are 7 feet 5 inches. The companion obelisk was afterward presented to the city of New York, where it was erected in Central Park in 1880. "Pompey's Pillar" is the most striking of the obelisks, the shaft of which is 73 teet long and 29 feet 8 inches in circumference, very much smaller than the shaft that will advertise Wisconsin at the world's fair.

1893. This is an opportunity to learn to dance in proper style, and still get pay for learning the fine art. Private Pupils will be entitled to two guesses, who take a course of 12 lessons. Now is the time to learn, and don't miss it. Remember the cheap Sale of Furniture is still going on, and parties will get some awfully good bargains in furniture, as well as other goods.
