HALIFAX NOTES.

Monday evening of this week was the last public band evening at the exhibition rink. The subscribers to the private afternoons will finish out the month if the ice lasts, but during the present week few people will go, while next week the weather

will probably annihilate the skating. The hocky match between the Chebucto's and Mutuals was a most exciting one, the Chebucto's winning by a very little. Mr. Gilbert Troop was referee, Messrs. J. N. Duffus and J. Mackay

Two other hockey matches of the week are the final one beside the Wanderers and Dalhousie, and one between the officers of the Garrison and the officers of the 66th. The ladies are confirming their energies to attending the matches, not playing now, and next week will probably employ all their evenings in going to the opera.

By the way, we are all glad to have the Baker Opera company back again, but is there nothing new under the sun that they must open with Boc caccio? The admirers of Miss Murphy are looking forward eagerly to her advent, however, and she will probably carry even so well worn an opera as

Curious Facts About the Ermine.

The ermine is a queer animal-it is one thing in winter and another thing in summer. That is a strange statement, but it is true, for in winter the animal's fur is as white as snow and it is called the ermine. In summer it turns reddish brown on i the upper part of the body and a light yellow on the lower part. The animal is then known as the stoat. This change is quite | from familiar to naturalists but not to unscientific people, and the ermine and the stoat are therefore generally regarded as distinct animals. The fur of the ermine is of much value and is in great request. At one time it was a mark of royalty and the state robes of judges and magistrates were lined with it as an emblem of purity. The ermine is so cunning in its ways that it is almost as difficult to catch as it is to "catch a weasel asleep." In fact, the only way to capture it is to mark its course from home and then strew mud in its pathway. When the dainty fastidious little animal reaches the point in its path where the mud is strewn it will lie down and subject itself to capture and death rather than smirch one of its snow-white hairs. - Cleveland World.
