BY AUTHORITY.

PROVINCIAL APPOINTMENT.

CHARLES E. KNAPP, Esquire, to be Registrar of Probates for the County of Westmorland, in the room of Thomas S. Sayre, Esquire, deceased.

By His Excellency's Command.

S. L. TILLEY.

Secretary's Office, 9th March, 1859.

SECRETARY'S OFFICE, Fredericton, 5th March, 1859.

THE following Notice is published by direction of His Excellency the Lieutenant Governor, for the information of all concerned.

S. L. TILLEY.

SOUTH AUSTRALIA.

NOTICE TO MARINERS.

MACDONNELL LIGHTHOUSE, CAPE NORTHUMBERLAND.

The Bearings are Magnetic. Variation 5° East.

The Master and Wardens of the Trinity House, Port Adelaide, hereby give notice that the Macdonnell Light, on Cape Northumberland, in lat. 38° 3' 0" S., long. 140° 37' 45" E., will be exhibited nightly on and after the 1st of January, 1859, from Sunset to Sunrise.

The Lighthouse Tower, which is 28 feet in height, stands on a rocky headland elevated 103 feet above high water mark.

The Light, which is catoptric and revolving, consists of three faces, and exhibits alternately every minute a White, Red, and Green Light, on an arc visible from seaward from N. 74° E. to N. 66° W. round by south (by compass.)

The White Light may be seen from the deck of a moderate sized vessel about 18 miles, and from aloft at a distance proportionate to the elevation attained.

The Red Light will not be seen, under the most favourable circumstances, at a greater distance than 15 miles.

The Green Light will not generally be distinguished beyond a range of 8 miles.

During hot weather and N. E. winds, when there is often much refraction, the White Light will frequently be observed at a great distance.

Vessels approaching from the eastward should not bring the White or Red Light to bear to the westward of W. N. W., and when the Green Light becomes visible on that bearing should steer more southerly, in order to give the reef, which stretches to the eastward of Cape Northumberland, a wide berth.

Vessels from the northward should never sight the White or Red Light on a bearing more southerly than E. ½ S., and on distinguishing the Green Light should immediately alter the course so as to give the outlying reefs, to the westward of the Cape running parallel to the coast a mile from the shore, an offing.

In bad weather with the wind hanging from the southward, it will be advisable to give the Cape such an offing as will enable a ship to pass the Lighthouse without sighting the Green Light, and should the weather, which is occasionally the case, be thick, or it be blowing hard, it will be prudent not to sight the Red Light, which, under such circumstances, would not be seen at the distance first given.

The coast to the north westward of the Cape soon becomes low, and owing to the heavy ocean swell which sets directly on the shore, should be very carefully avoided.

To the eastward of the Cape is a deep bight, which offers no shelter from the prevailing winds and swell, or inducement to enter.

The Lightkeepers are provided with a nine pounder carronade, and a code of Marryat's Signals, which will be used to warn vessels if observed to be standing into danger.

B. DOUGLAS,

Master of the Trinity House, South Australia.
