LAS to every thing which concerns the interests of would lead them to. It is not my wish to disturb surely you cannot look for the blessings of continued trate who should abuse his power would bring down this Province, we have the honor of presenting our readers with the results of an Analysis of the water of the Springs in Sussex Vale by an eminent ity, with all the information they had in their pos- to entertain such an idea; and your case is so des-Chemist, which His Excellency has most obligingcommunicated to His Honor the President for insertion in the Gazette.

Edinburgh, 25 August, 1829. Upon taking the average of a considerable number of trials made with a bottle of the Water sent me from the Salt Springs in Sussex Vale, in the Province of New-Brunswick, I have ascertained the following facts with regard to it. It contains all the ingredients which are found in the water of the Ocean, and likewise a considerable quantity of Sal having lime for its base; I compared it with water brought from the Frith of Forth, and find it heavier than that from Leith. The specific gravity of this water compared to distilled at 60° as 1000, and those of the Sea water from Leith, and the City water, are as follows (as indicated by a delicate specific gravity bottle.)

That from New-Brunswick, 1,031 1-10; Salt water from Leith, 1,023 2-10; City of Edinburgh water, 1,000 3-10. The water from Sussex Vale appears therefore t be more saturated with Salts than the Sea Water on the coast here. A thousand grains of the New-Brunswick water afforded

966 2-10 grains of pure water, and 33 8-10 grains of Salts.

Thus the water from New-Brunswick contains nearly one thirtieth part of its weight of Salts. With regard to the application of the water to Medical purposes, I may add, that, in such cases as are benefited by sea water, the spring in Sussex Vale must be of greater advantage as it is much tronger, and therefore the patient does not require to swallow so much water; and from the Salts of Lime which it contains it might be of service to those who have any debility in their bones, but in all its applications to medicine, it would be adviseable to boil the water down to one half or even to less. From the experiments I have performed with it, I am satisfied that the water from Sussex Vale,

contains no deleterious ingredient. JOHN DEUCHAR. To Sir Howard Douglas, ? &c. &c. &c.
