HOTELS.

QUEEN HOTEL,

Queen Street, Fredericton, N. B.

This hotel has been refitted and painted in the most elegant style. It is a pleasant and comfortable place for the tourist and the business man. It is centrally located, directly opposite to the steamboat and other ferry landings, and within a minute's walk of the Parliament Buildings, County Registrar's Office and other public buildings. A first-class bar and billiard room are attached to the hotel. The table is always supplied with every delicacy available. The dining room is elegantly furnished and the service is of the highest quality. There are two of the largest and most comfortable beds in the city. The hotel is managed by J. W. Wilson, M. P. F. Geo. L. Wilson.

GILLET'S

PURE POWDERED LYE

PUREST, STRONGEST, BEST.

For Bleaching, Dyeing, and all other purposes. It is the most powerful and reliable of all bleaching agents. It is sold by all Grocers and Druggists.

I CURE FITS!

When I say I cure I do not mean merely to stop them for a time and then have them return again. I mean to cure them for ever. I have cured many cases of Epilepsy, and I can cure yours. My medicine is simple and safe, and it is the only one that will cure you for ever. It is sold by all Grocers and Druggists.

WATER IN BUTTER.

One who writes as if he knew all about it makes the statement that 12 to 18 per cent of water in average butter is "water of composition," and that a certain amount of water is absolutely essential to the composition of butter, and hence it is "absurd to talk about butter fat, free from water, as a measure of purity." This loose way of stating things would lead one to infer that the fat of the butter is chemically combined with the water in it, an altogether wrong impression; this water is simply mechanically mixed with the fat, and persistently re-appears, and is not lost. It can be got it out, just as an amount of wringing will make a dry towel out of a wet one; the two cases are exactly parallel. The same writer says without apparent good reason that milk with larger fat globules yields a better butter than milk with small globules, on the same amount of working; this is reasonable, because less water would be entangled by the coming together of fewer large globules to form the first little grains of butter than by the coming together of the large number of small globules necessary to form grains of the same size. This water cannot be essential to the flavor of the butter, or any quality, except that, being in the liquid form, among the particles of the fat, it will be saturated with the salt that has been put in it; thus it may take an indirect part in this quality of the butter, that it shall have a certain degree of saltiness; and yet this is in a certain sense an artificial taste; every American student of Germany in former days remembers with pleasure, I doubt not, the part of perfectly fresh, unsalted butter that was brought with the coffee and rolls for his breakfast.

BE A MAN!

WEAK MEN

FOR A LIMITED TIME

FOR BILIOUSNESS, CONSTIPATION, INDIGESTION, DIZZINESS, SICK HEADACHE, AND ALL AFFECTIONS OF THE STOMACH, LIVER AND BOWELS. THEY ARE MILD, THOROUGH AND PROMPT IN ACTION, AND FORM A VALUABLE REMEDY FOR ALL AFFECTIONS OF THE DIGESTIVE TRACT AND OF CHRONIC AND OBSTINATE DISEASES.

VIGOR and STRENGTH!

For LOST or FAILING MANHOOD, General and NERVOUS DEBILITY, Weakness of BODY and MIND, Effects of Errors or Excesses in Old or Young, Robust, Noble MANHOOD Restored. How to ENHANCE and strengthen WEAK UNDEVELOPED ORGANS and PARTS OF BODY. Absolutely unfailing HOME TREATMENT—Benefits in Pleasure, I doubt not, the part of perfectly fresh, unsalted butter that was brought with the coffee and rolls for his breakfast.

KEEPING POTATOES FROM ROT.

A French correspondent of the Farming World gives the following method of preserving potatoes affected by the "rot" or "potato sickness":—"The potatoes, taken up if possible from earth, are to be spread as a thin layer on a moistened floor, open and airy, and, for completely wind-drying of its surface. For the storing of it is to be a moisture free cellar, whose bottom if it cannot be covered by asphaltum, cement or bonis—ought to be covered by a layer of charcoal dust. On the floor, thus prepared, is to be spread a thin layer of slacked lime, and thereupon the well wind-dried potatoes, by layers bestrewn by the lime. The damaged potatoes, thus stored, are preserved against further spreading of the rotteness far beyond the time of the potatoes' harvest of the subsequent year. Whether its germinative power thereby even is maintained is not yet fully determined. By this method, potatoes showing continued putrefaction at use being well washed, can easily have their affected parts removed, those a short time after the storing being darkish and indurated. The rest of the potato when boiled is in taste, and as nourishment as good as never damaged potatoes of the same kind.

FARM AND FIRESIDE.

Timely Hints Useful to the Farmer and His Household.

Many a family, says a writer in the American Bee Journal, like to keep a few bees to produce honey, but very few know how to manage them properly. The result generally is that they are not at all bees, and the swarms fly away; and the bees swarm when the farmer is haying, and his wife or some of the hired help neighbors are led to attend them. All know, also, that bees have stings.

That is not always very agreeable; but I have a plan by which almost any family may keep a colony or two of bees with very little trouble, and have plenty of honey. Here it is: Make a small, dark, first-proof wooden box, four by six inches high. This may be enlarged or contracted to suit the season of year. These entrances should be on that side of the box which is used the least, for bees sometimes get too familiar. Now put the lives on the scaffold, about six inches from the entrance. Make a plate board for them to travel on and in. A hive should contain about 2,000 cubic inches, and have holes in the bottom. It is said that bees will seldom swarm from such a place, and will winter there, even in a climate as Wisconsin. Of course, further north the room must be warmer. Bees will build combs under these hives in large quantities, in favorable seasons, in such a room, and the owners, when they want honey, may go with a lighted candle, about six inches from the top of the hive, and find that it is not a mere "candle in the air," but a practical one. I am an experienced apiarist, have been in the business many years, and have produced tons of honey.

HELPFUL HINTS.

Such as Young Housewives may well make a note of.

To purify water hang a small bag of charcoal in it.

For toothache try oil of eucalyptus, and apply it frequently, if necessary.

Vinegar bottles may be cleaned with crushed eggshells in a little water.

If the color has been taken out of silk by fruit stains will usually restore the color.

A good liniment for inflammation, rheumatism, swelling, etc., is olive oil well saturated with camphor.

A good cement is melted alum, but it must never be used when water and heat are to come in contact with it.

To clear a stove of tinkers, put a handful of salt into it during a hot fire. When cold, remove the tinkers with a cold chisel.

To mend cracks in stoves and stove-pipes make a paste of ashes and salt with water and apply. A harder and more durable cement is made of iron filings, salt, ammoniac and water.

Bits of soap which are too small to be used should be carefully laid aside for laundry days, when they can be melted up to add to the wash boiler instead of scraping up new bar of soap.

For a cut take powdered resin, pound it very fine and spread or sift it over the cut; wrap a piece of soft linen around it, and wet it in cold water quite often. This will prevent inflammation and soreness.

The soap saver is a useful little utensil. It is a box of wire net with a long handle attached. The soap is placed in it, and if shaken in a pan of dishwater will produce a strong sud without the slightest waste.

For severe hemorrhage from the nose try holding the arms of the patient up over the head for five minutes at a time. A small piece of ice wrapped in muslin and laid directly over the top of the nose will usually give relief.

For severe neuralgias may be made by stirring the cream in a bowl, and this is done every day by some good housekeepers who prefer butter made of sweet cream and are willing to perform this labor that they may have it daily.

One of the small annoyances of life occasionally is the attempt to draw an obstinate glass stopper. Immersion in hot water for some minutes is sometimes efficacious, but far from always. A sure method is to take a bureau drawer, tie a cord to handle or key, holding the other end firmly and with your best strength, rapidly the neck of the obstinate bottle. In less than two minutes the glass will be too hot to touch and will have expanded all around the refractory stopper, which will fall out.

THE HEAD SURGEON.

Of the Lunon Medical College is now at Toronto, Canada, and may be consulted either in person or by letter on all chronic diseases peculiar to man. Men, young, old, or middle-aged, who find themselves nervous weak and exhausted, who are broken down by excess or overwork, resulting in many of the following symptoms: Mental depression, premature old age, loss of vitality, loss of memory, bad dreams, dimness of sight, palpitation of the heart, emissions, lack of energy, pain in the kidneys, headache, pimples on the face, itching or peculiar sensation about the scrotum, wasting of the organs, dizziness, specks before the eyes, twitching of the muscles, eye lids, and elsewhere, lassitude, deposits in the urine, loss of will power, tenderness of the spine, and general weakness and flabby muscles, desire to sleep, failure to be rested by sleep, constipation, dullness of hearing, loss of voice, desire for solitude, excitability of temper, sunken eyes surrounded with leaden, oily looking circles, and all other symptoms of nervous debility that lead to insanity and death unless cured. The spring or vital force having lost its tension, every function wanes in consequence. Those who through abuse committed in ignorance may be permanently cured, and their health restored, by the use of this medicine. Book sent free. Heart disease, the symptoms of which are faint spells, palpitations, numbness, palpitation, skip beats, hot flashes, rush of blood to the head, dull pain in the chest, which becomes stronger, and irregular, the second heart beat quicker than the first, pains about the breast bone, etc., can positively be cured. No cure, no pay. Send for book. Address: M. V. LUBON, 24 Macdonell Ave., Toronto, Canada.

A NOVEL MULE STORY.

"I had a funny thing happened to me once on the Chesapeake and Ohio Road. I scaped up a mule in the middle of the track, and I whistled for all I was worth, but the mule kept in the track on a run. As I had to stop, the mule kept on running, and I was driven off. By the time the mule got back and we had started that confounded mule was on the track again and we were after him. We didn't dare to take the risk of running over him, for that is a dangerous business, so we had to stop again and drive him off. Well, this thing occurred once or twice more, and by the last time we had got so close to the bridge that we were sure the fool mule was going to try to cross it, and we stopped again, this time crossing the bridge and fully prepared to shoot the mule's head off. We chased him into the field he went with a bay, and stopped all right in the road below, and right ahead of us on the bridge, fastened down some way by his legs between the ties, we found the mule's head. We saw it then and, by George! we were tempted to take up a collection from the passengers on board for the benefit of the mule which had saved their lives, for if we had run in on that construction nothing under heaven could have saved the train.

I had a very respectable sized tie to tell myself," he said wisely, "but I'm too paralyzed to tell it this evening," and the door slammed to on his heels.

A DANGEROUS BIRD.

During the nesting season the male or female of anything but an agreeable creature and resents the intrusion of any visitor on his domain in a very peevish way. His mode of attack is by a series of kicks. Instances are known of men being killed outright by a single kick. If a man is in flight it is useless for him to seek safety in flight, as the bird would easily overtake him. The only plan is to lie flat on the ground and submit as resignly as possible to the inevitable punning, which, if it may be expected, will be repeated at intervals until a means of escape presents itself, or the bird affords an opportunity of being caught by the neck, which, if tightly held and kept down, prevents much further mischief.

IN THE FLAMES.

Burning of an Hotel in New York City.

CALM GORE, Feb. 8. - A fire began in the Hotel Royal at the south-east corner of Fortieth street and Sixth avenue at 3 o'clock Sunday morning. It swept through the building like lightning. The guests had no time to escape until the flames were awakened by the crackling of the flames and by the suffocating smoke. They rushed to the halls and were driven back by the fire that even then was burning through the walls and doors of their rooms. They ran to the windows. Not all the rooms were furnished with the rope escapes that the law requires. Numbers leaped out. Five were killed instantly outside the walls. Dozens more were hurt. There were 165 or 175 persons in the hotel when the fire started. Not all their names are known, because a thief stole the register when the fire first broke out. But even the register would not tell the story, for many of the transient guests at the hotel were of the kind who register under aliases to conceal their identity. They came with women who were not their wives.

The list of dead is not complete. The walls fell in and the bodies of those burned are under the debris. It may be that the dead will not number more than twenty. They may number twice as many. The list of missing printed in The Sun numbers forty. A large portion of these persons are probably safe, though they may never be probably accounted for.

With five corpses in the Morgue, eight others were buried, forty as missing or injured, to be-Vino, formerly a well known actor, and fifty-two persons still to whom nothing has been heard one way or another, if there were 165 persons in the house. It is probable that nearly all of these fifty-seven persons were at every window in the house. They held out their hands appealingly. They leaped out and over the sills, clutching at the air. Here and there was a cool one, enough to use the rope escapes that were in some of the rooms, and they clambered out and slid down them. Here and there a man or a woman leaped up on a window sill and stood a moment and then sprang wildly off. Two men dived head-down from the third floor on the Fortieth street side. One fell flat on the pavement, and was picked up. The other struck sideways on his head and his head was smashed and crushed shapless.

Two women leaped from one window on the third floor on the same side. They had stood a moment clasp in each other's arms. They jumped, still clasped together. They fell apart, one dead, one unconscious, on the pavement.

From the same window leaped two men. One shrieked wildly as he cut through the air. He did not move after he fell, and he was dragged away dead. His companion landed on his feet and sank down and fell over. He writhed about on the pavement just a moment. Then he leaped to his feet and dashed off through the crowd. He was not seen again. Probably his name or his alias is in the list of missing.

The fate of those who fell could be seen by those who clung to their places in the windows, and it made some of them hesitate to follow. Some who leaped escaped to the street. One man and a child in the Fortieth street side there was the coolest man in the building. He was fully dressed and wore a hat. He fell fully dressed and landed safely.

When the ladder was in place a dozen firemen and almost as many policemen dashed up it and leaped off on the balcony at the first floor, and into the windows at the second and third floors. The policeman made a sick woman fall from the balcony, and she fell on the ground, and they all fell in a heap. They also escaped serious injury.

The sixth body to be taken from the hotel Royal was found at 9 o'clock Wednesday morning in a room on the top floor. It was apparently that of a woman, but so badly burned as to make identification impossible. By 10 o'clock the bodies of two more men had been recovered, making in all eight bodies thus far taken from the heap of ruins.

On Wednesday morning a force of 125 Italian laborers began the day's work of searching for the dead. A mass of steaming wreckage choked up the space between the blackened and disfigured walls. Until this heap of debris had been removed no one can tell what the death pit will disclose. An immense crowd of people gathered about the ruins. The number of persons in the building when the fire broke out was 152. Of these eight are known to be dead, 51 were rescued by the firemen and citizens and 93 are still missing.

During the fire the windows of the hotel were filled with people in their night clothes making piteous appeals for help, while behind them was a sea of flames. Indeed they seemed to be actually in the fire.

The firemen did wonderful work in their efforts to rescue people by carrying them down the ladders, for entrance or exit to the building by the staircase was entirely cut off.

Two men and two women leaped from upper windows and were dashed to death on the pavement below.

A tall handsome young man climbed down from the Sixth avenue front from the topmost window. Slowly he picked his way from sill to window cap and from cap to sill. He reached the ground seriously burned and bruised, but alive, and the crowd cheered him with wild enthusiasm.

Policeman Callahan reports that he saw a man, a woman and a little girl at a window on the third floor; there was a crash, and several flames and sparks and the trio disappeared from view.

THE NEW LANGUAGE.

Our Weekly Lesson in Volapuk.

Lesson II.

The sixteen lessons have pretty far set forth the facts of Volapuk grammar, and those who have carefully followed them should now be able to write the language so as to be intelligible in it to people of all nations. Facility in using the language must come from practice, and it is earnestly recommended to all students to systematically follow correspondence. Those who wish names and addresses of persons willing to correspond with them can obtain them from those who have revised their exercises during the lesson-course.

One important caution is given. In translating, analyze your English and translate the sense; for in all languages there are necessary and also conventional or idiomatic phrases, and the literal translation of the latter will not convey the idea intended. Thus if one wishes to write what is expressed in English by *I shall be on hand*, one must translate the sense of *on hand*, not the words, and his translation will be *I shall be present*. If he wrote *Obinob su nam*, an English Volapukist would laugh at it, and a Chinese Volapukist would not know what it meant; but if he wrote *Obinob plisenik* or *Obinob us every Volapukist would understand it for what it was intended to mean.*

Proper names are written unchanged, and the genitive is expressed by the prefix *de*, their dative by the prefix *al*.

VOVABULARY.

Nouns.	Verbs.	Adverbs.
Bap, humble.	Dalob, to be.	Fe, certainly.
Gaid, pleas.	Lolon, to be-Vino, formerly ure.	long to, Volopio, else-where.

Jeni volapuko?

(The deviation from the usual order of construction is permitted in Volapuk poetry.)

"Mild pleasures and palaces though we may roam,
Be it ever so humble there's no place like home,
A smile from the skies seems to hallow us there,
Which, search the world over, is never found elsewhere."

ORIGIN OF AN OLD SONG.

There have been several versions of the origin of "The Old Oak Bucket," says George M. Young in the January New England Magazine. The most widely circulated and popularly believed is as follows: When Woodworth was a journeyman printer in an office on the corner of Chatham and Chambers streets in New York near by in Frankfort street was a saloon kept by a man named Mallory, where Woodworth and several particular friends used to resort. One afternoon the liquor was unusually excellent, and Woodworth seemed inspired by it. After taking a draught of the beverage, he declared that he was superior to the Mallory's can de vie was superior to anything he had ever tasted. "No," said Mallory, "you are mistaken; there was one thing which in both our estimations surpassed this in the way of drinking." "What was that?" asked Woodworth, dubiously. "The draught of pure spring water that we used to drink from the old oak bucket that hung in the well, after our return from the field on a hot day in summer." A teardrop glistened for a moment in Woodworth's eye. "True, true," he replied, and shortly after quitted the place. He immediately returned to the office, took a pen, and in half an hour "The Old Oak Bucket" was ready in manuscript to be embellished in the memories of succeeding generations.

THE ELECTRIC LIGHT.

Is a matter of small importance compared with other applications of electricity. By this agency Polson's Nervine is made to penetrate the most remote nerve—every bone, muscle and ligament is made to feel its beneficial power. Nervine, pleasant to take, even by the youngest child, is so powerfully far reaching in its work, that the agonizing internal pain yields as if by magic. Nervine relieves neuralgia instantly and for the speedy cure of nerve pains of every description it has no equal. Sold everywhere.

Considering Mr. Gladstone's achievements with the ax, wouldn't it be more appropriate to call him the "Grand Old Feller"?

By looking at the quotations of the Virginia tobacco markets it will be found that the highest price paid for "fillers"—which is the tobacco which forms the body of the pipe—very closely corresponds with the invoice price of tobacco leaf imported into Ontario. As over four-fifths of all the leaf imported into the Province is for "Myrtle Navy" stock, this fact is official proof of the claim that "Myrtle Navy" is made of the finest Virginia leaf.

Figgs—"Look out, there's danger! don't you see the red flag in front of that house?" Diggs—"What is it—small-pox?" Figgs—"No action!"

DR. T. A. SLOCUM'S

Oxygenized Emulsion of Pure Cod Liver Oil. If you have a wasting away of flesh—Use it. For sale by all druggists. 35 cents a bottle.

The surest way to become poor in earnest is to try to keep all you get.

DR. T. A. SLOCUM'S

Oxygenized Emulsion of Pure Cod Liver Oil. If you have any Throat Trouble—Use it. For sale by all druggists. 35 cents per bottle.

Ready money is a good thing to have, but a contented mind is better.

DR. T. A. SLOCUM'S

Oxygenized Emulsion of Pure Cod Liver Oil. If you have Bronchitis—Use it. For sale by all druggists. 35 cents per bottle.

An obese individual can strike but one one—adiPOSE.

EASILY CAUGHT.

Croup, colds, sore throat and many painful ailments are easily caught in a changeable climate. The never-failing remedy is just as easily obtained in Hagar's Yellow Oil, which is undoubtedly the best of all the many remedies offered for the cure of colds or pains.
