

THE TRANSVAAL

VOL. III., NO. 28.

FREDERICTON, N. B., SATURDAY JUNE 18, 1892.

\$1.00 PER YEAR.

HOTELS.

QUEEN HOTEL,

Queen Street, Fredericton, N. B.

THIS HOTEL has been REBUILT AND PAINTED IN THE MOST ATTRACTIVE STYLE. AN ELEGANT GENTLEMEN'S PARLOR, OFFICE, AND BEAUTIFULLY DROEGED DINING ROOM on ground floor. PERFECT VENTILATION throughout. THROUGHOUT LARGE AND AIRY BEDROOMS. COMMODIOUS BATH ROOMS and CLOSETS on each floor. It is capable of accommodating ONE HUNDRED GUESTS. It is rapidly growing in popular favor, and is the only one of the kind in the city. THE MOST COMFORTABLE HOTELS IN THE DOMINION. The Table is always supplied with every delicacy available. The cooking is highly commended, and the Staff of Attendants are ever ready to oblige. There are two of the largest and most conveniently situated SALT WATER BATHS in Canada, having steam entrances and also connecting with Hotel QUEEN. HORSES and CARRIAGES of every style are to be had at the LIVERY STABLE of the Proprietor, immediately adjacent to the Hotel. The "GARDEN" is centrally located, directly opposite to the Steamboat and Cotton Ferry Landings, and within a minute's walk of the Parliament Buildings, County Registrar's Office and Cathedral. A FIRST-CLASS BARBER SHOP IN CONNECTION.

FARM AND FIRESIDE.

Timely Hints Useful to the Farmer and his Household.

It costs but a trifle and the results are wonderful. Prof. A. J. Cook, of Michigan Agricultural College, advises as follows:

Loam Purple—One pound to 200 gallons of water. Used to destroy codlin moth, curculio, leaf rollers, tent caterpillars and canker worms.

For codlin moth apply just after the blossoms fall, and again two weeks later. This kills all the other insects mentioned except the curculio. For curculio apply as soon as the calyx falls and again twice at intervals of ten days.

Kerosene and Soap Mixture—Soft soap one quart, or hard soap—preferably white oil soap—one-fourth pound; two quarts hot water and one pint kerosene. Stir till all are permanently mixed. Then add water till the kerosene forms one-tenth of the whole compound.

This kills aphides or plant lice, bark lice, many bugs; apply with force pump. Apply when insects are young.

Babach, or California Pyrethrum—Use one ounce to three gallons of water. This is a specific for cabbage caterpillars, cherry and pear slug, etc. Dash it into the insects with spray bottle or force pump.

White Heliober—Use one ounce to three gallons of water. This kills currant slug. Apply with force pump.

Carbolic Acid and Soap—One pint of crude carbolic acid, one quart of soft soap and two gallons hot water. Thoroughly mix and apply with a cloth to trunk and large branches two weeks after blossoms fall and again three weeks later. This prevents the borers from working and kills the bark lice.

Tobacco Decoction—This is made as strong as possible as a wash or spray to kill insect pests on animals and plants.

Soap Emulsion—In one gallon hot water one-half pound whole oil soap is dissolved. This, instead of milk, is mixed with one quart of tobacco decoction and one sprinking with water applied with a watering pot, destroyed every worm and egg—a most valuable fact, if it is a fact. It is prepared by placing a quart of two of coal tar in a tub or barrel and adding one quart of water. After eight hours the water will smell strongly of tar, when it may be dipped off and applied to plants with a syringe or common watering pot.

RATIONS IN THE DAIRY.

A cow in full milk should have from six to eight quarts per day of grain feed, and many cows will pay for a larger ration. I get much better results from ground feed than from whole grain of any kind; this is probably the case in regard to corn. Ear corn does not seem to help the cows much, but when shelled, ground and mixed with a little bran is my standby every winter, said Mr. J. C. Mayes, of Clay Centre, Kans., before the Kansas State Dairy Association.

"I am just as much as I like a variety. I am feeding at present milk and hay, corn fodder and oat straw. I consider good oat straw equal in value to prairie hay, and as a crop to feed on in the farm the oat is one of the most valuable we raise. In regard to corn, I have found that a field planted thicker than the regular crop Cut and shock it before maturity and feed without husking. After trying different ways for a number of years I now leave the shocks standing in the field and haul them as feed. On former years we had millet or whatever it is at our stable. In Kansas we usually have enough warm weather in which to feed out a large crop of fodder, and my experience is that the less it is handled the better.

In conclusion, our cows will treat us very much the same as we treat them. If we kick, they are almost sure to kick back. If we starve them, we shall starve so far as they are concerned; but if we feed them liberally, they will reciprocate and return the compliment.

FRANK LESLIE'S FOR JULY.

Conspicuous in interest and timeliness among the magazine articles of the month is the comprehensive paper upon "Pope Leo XIII.," by Richard B. Kimball, LL. D., which opens the July number of Frank Leslie's Popular Monthly. Dr. Kimball sketches clearly the situation of Italy and the church at the time Leo XIII. became Pope, and in this manner we get a masterly review of the ecclesiastical and diplomatic career of the venerable Sovereign Pontiff. Accompanying this paper is an admirable reproduction of the new portrait of the Pope, by Chartran, and filling up with water, "The Russian stricken Russia," by Thomas Donnelly and Valerian Ortobeyedoff, describing and illustrating contemporary scenes in the Volga provinces. Other interesting articles, with copious pictorial embellishment, are: "Lucky Riders," by Edward H. Morris; "National Holidays," by Frederick S. Daniel; "Exploring Talamanca," by Cecil Charles; "How the Birds Come to the Green Mountains," by Nelly Hart Woodworth; "Abdul-Hamid II., the Sultan of Turkey," by T. P. Apery; and "Etching with Fire"—a thorough account of the unique art of which Mr. J. William Fostick is the foremost exponent—by Franklin Smith. There are half a dozen excellent short stories; and Etta W. Pierce's serial, "A Terrible Case," is brought to a dramatic conclusion.

TO TALK WITH MARS.

Probably none of the many fascinating theories that have been advanced by astronomers during the last decade is more interesting than the recent investigations as to the planet Mars. Scarcely, the idea that the celestial neighbor inhabited has taken renewed hold on the savants, and it is not yet accepted by them as fact; nevertheless distinctly countenance it.

One of them now suggests that by leaving a thin film of ice in diameter, covering it with a coating of black and constructing thereon a frame carrying 6,000,000, intensely brilliant air lamps, it would be possible to establish communication with the Marsians. It is even intimated that as they may be in a more advanced state of civilization than ourselves they could easily respond. After seeing the earth flashing its signals at regular intervals they would construct a similar semaphore and commence inter-planetary conversation.

The enormous expense of such an experiment, coupled with the uncertainty as to its results, is such that it will be several years.

HOUSEHOLD HINTS.

Such as Young Housewives May Well Make a Note of.
