BE A MAN

Loosened in the coils of the fatal serpents was not more helpless than is the man who pines under the effects of disease, excesses, overwork, worry, etc. Rouse yourself. Take heart of hope again and BE A MAN! We have cured thousands, who have turned to desperation. But the evil has been greatly increased by the blight and rot diseases, and by the ravages of the potato bug. Whatever injures the leaves of a potato plant lessens its vitality and destroys its value for seed. It is hardly possible to entirely cure an injury to a potato. Every plant affected produces seed that is less vigorous, and as the beetle selects the less thrifty plants to deposit its eggs the injury rapidly increases, until a larger part of the crop is made worthless for seed purposes. It is impossible to select the best potatoes from a blighted lot. It can only be done by going through the field and marking the most productive plants as the crop is harvested.

FARM AND FRESIDE.

Timely Hints Useful to the Farmer and his Household.

The Woodstock Press says: But little interest has hitherto been taken in this county in silos; and though fodder corn has been planted by some, it was only on a small scale and to be used for feed, feed, and stock. Messrs. Peabody, Frost, and Mr. Webster, two miles below Woodstock, Carleton Co., are the pioneers in this county, they started them last year. Our reporter visited Messrs. Peabody a few days ago for information on the subject. Their silo is very simple and inexpensive in construction. It is large enough to hold about twenty-five tons of ensilage and the cost did not exceed \$75, including the labor. It is built in the barn, the posts of that building being high, and the silo, where the silo was partitioned off, up some distance in the ground. The silo is built from the ground; it is 11 feet wide, 16 feet long, and 22 feet high. Silos are laid on the ground, and to prevent any air coming under them, strips of sheet iron 18 inches wide are closely laid to the lower inside of the silo and sunk in the ground. The silo is made of 2x3 inch plank which are placed two feet apart. It is double boarded outside with rough boards. The inside is first covered with sheathing paper and then boarded with matched spruce. They had sixty-five loads of ensilage in last fall and it filled the silo about two-thirds full. They planted three acres of corn, besides what they used for fall feed. The seed was procured from Steel Bros, Toronto, southern sweet ensilage. The ground was not selected with a view to raising a large crop; it was a piece of sod which had not been previously manured for many years. They gave it a fair coat of cow manure, spread broadcast. The seed was planted, with a grain drill, in rows about three feet apart. The corn was sown in rows, and the ground though not in good condition, was quite free from weeds. The seed was planted about the middle of May and harvested the middle of September. The growth had not matured, the corn was formed, but not filled. The silo was open in the middle of the season, and a long time to mature for this climate and they will try another variety this season. Messrs. Peabody keep eighteen milk cows; they commenced feeding ensilage on the 18th of December, they gave each cow a quart of ensilage for each pound of hay, and two feeds of hay. Their cattle are now in fine condition. The ensilage was cut in about inch pieces with a Ross ensilage cutter, packed carefully and covered with about two feet of coarse straw and the same of hay. The ensilage kept well, and the cows were doing well. It has been shown that, cut straw would have made a better covering. The ensilage was taken out from the bottom and therefore settled from one wall and some was damaged thereby, air getting in. The silo would have been avoided by using out from the top.

FARM AND FRESIDE.

Timely Hints Useful to the Farmer and his Household.

Messrs. Peabody keep about 18 cows and sell their milk. Their cows are in fine condition, better they say, than when they had no ensilage. They feed grain but they do not think grain would be well, except on top where the covering of the silo has been made. They say they will try an earlier variety this year and also try some small yellow corn. This, they say, though it grows less in bulk, makes a much richer feed. They are well satisfied with their experiment last year, and say the ensilage fed paid all the expense of raising and of building the silo too.

DRAINING WITH WOOD.

Some farmers and gardeners remote from the cities and railways, find it as to the mode of constructing the drains of drains of wood, and their durability. The simplest mode of construction is to procure inch boards six inches wide and nail them together at the edges so as to form a trough, and in the bottom of the trough like an inverted U. If the soil is hard, the lower edges will rest sufficiently on the soil; but if the soil is not firm, supports may be placed at distances of several feet asunder; these supports may be of small pieces of boards laid flat on both sides of the trough. Hard and durable kinds of wood for the boards will be of course last much longer than soft and perishable wood, but the durability will depend on circumstances. If the soil is light and porous and changes often from wet to dry the boards will decay sooner than if covered with a compact soil, and the water remains more uniform the season through. On examining the boards several years after laying, those nearest the outlet and where the air enters, will be found more decayed than those further up the drain and more included; and the side of the boards next to the channel will be more decayed than the part in contact with the earth which rests on them. Well excluded from the air, durable kinds of wood may last ten or fifteen years or more; and the ensilage fed paid all the expense of raising and of building the silo too.

WHY POTATOES RUN OUT.

It is comparatively only a few years that potatoes have been largely grown for market. It is possible that under any conditions, the plants grown as they are from eyes or buds would thus perpetuate the weaknesses of the parent stems, and thus tend to degeneration. But the evil has been greatly increased by the blight and rot diseases, and by the ravages of the potato bug. Whatever injures the leaves of a potato plant lessens its vitality and destroys its value for seed. It is hardly possible to entirely cure an injury to a potato. Every plant affected produces seed that is less vigorous, and as the beetle selects the less thrifty plants to deposit its eggs the injury rapidly increases, until a larger part of the crop is made worthless for seed purposes. It is impossible to select the best potatoes from a blighted lot. It can only be done by going through the field and marking the most productive plants as the crop is harvested.

THE WREN.

"The wren," says an observer, "hatches a remarkably large number of eggs, sometimes as many as seventeen. The building of the nest shows a desire for ample room. It is usually so long and narrow that a small child can scarcely get in its two fingers together, and then they will not reach one-third of the distance to the end. Now, how are the seventeen little ones fed? The bird must make several trips for food at every meal, feeding one or two of her numerous brood at a time. How does she recognize those which have received their portion and those which have not? The little ones always stretch their necks, open their beaks, and, like Oliver Twist, persistently call for more; but the mother carefully avoids giving anything beyond the quantity which she will not interfere with the digestion of her offspring. The question is one which I have never been able to answer. It is one upon which the scientists of the keen observation of Darwin or Richard Jefferson could throw an interesting light."

HOW TO LIVE LONG.

Two brothers, one eighty-nine years old, the other eighty-seven, were witnesses in a case before the supreme court thirty years ago. Both were apparently in perfect physical health, and the judge questioned them as to their habits of life. The elder said he had been a smoker all his life, and had never gone to bed sober when he had money enough to get drunk. The younger had never touched tobacco or liquor. The discriminating reader may easily see the secret of longevity in this anecdote.

EARLY POTATOES.

A rich, deep and dry soil is necessary to grow early potatoes. We say dry, because the seeds must be planted early, and if wet and cold they will not rot so fast. This rich, deep soil, that is dry in early spring, will be all the moisture during the droughts of summer. If the potato tips can be kept green a week longer on one piece than on another, it means doubling the crop. It is impossible to select the best potatoes from a blighted lot. It can only be done by going through the field and marking the most productive plants as the crop is harvested.

BEAUTIFUL HORSES.

Some Well Bred Youngsters that Claim Attention.

The great benefit which the country has realized from the government horse importation is only beginning to be comprehended. All sections now have fine horses, this is especially the case where the agricultural societies have been wide awake and have taken advantage of the splendid stallions that the local government thought worth the trouble to send to reach. Throughout Sunbury the class of horses has advanced much during the past few years and that county boasts that its style, weight or speed it can hold its own against any in the province.

Among the fine young horses, we may mention a black mare with white blaze owned by Geo. Seely of Central Blissville. She is a beauty, three years of age and well adapted for breeding purposes. She is by Knight of Chester, dam a good common mare, Perley Seely of the same place has a six year old grey, tracing breeding to John Knight, weight about 1000, a finely gotten up roader, showing good speed, and well broken. Anyone wishing a good family horse, fit for anything should take a look at this one.

C. L. Tracy, Tracy Station, has a beautiful dark grey three year old mare by Knight of Chester. This is a magnificent filly and is in the best of hands. Mr. Tracy has bred some good horses, notably Jumbo, the great 1650 stallion owned for several years by Thomas Robertson of Harvey Station. This filly is very well \$250.

Wm. Logue, Burton, has a very nice one, a grey also, from an imported stallion. It is two years old but large enough for five; stylish, strong and active, is a beauty.

John Perry has a very nice one, a grey also, from an imported stallion. It is two years old but large enough for five; stylish, strong and active, is a beauty.

John Perry has a very nice one, a grey also, from an imported stallion. It is two years old but large enough for five; stylish, strong and active, is a beauty.

HARVEY STATION.

JUNE 2.—There was a large and intelligent gathering of people at the agricultural hall on Monday evening to hear Mr. John Robertson's lecture on Dairy Work. Mr. Mowitt in the chair. After being introduced by the chairman Mr. Robertson, made a few well chosen remarks as an introduction to the subject of the evening, showing the only successful way in teaching any branch of learning whether mental, moral or physical, to be in the teacher making himself as one of the taught and having the freest intercourse and conversation on the subject in question. By a few blackboard illustrations he showed the difference in the elements of milk and the percentage in which they appear, and in the most intelligent manner showed how these parts are best and most easily separated. Having got some cream, hot and cold water, from a neighboring farm, he opened up his dairy and proceeded to exhibit some of the butter right in plain view of the meeting and invited questions from any one or every one, and a good many were asked and answered. After scalding the churn and other utensils he weighed the cream, 17 lbs., and warmed it to 65 degrees by the addition of a little warm water at which temperature it was churned for about 20 minutes or until the butter began to gather when it was cooled down to 62 degrees by putting in a little cold water and again churned for 25 minutes, the butter then being in particles about the size of wheat. The butter was then run off and a little water thrown in, and then drained off, more cold water put in and the churn turned three or four times slowly, and the butter was finished; this showing that the butter is better when the butter can be washed at this stage as compared with the method of churning until it is all in one big lump. After draining off the water, which was almost as pure as when it was put in, the butter was lifted into a cloth and allowed to drain, the remaining water out of it. He showed particularly how this should be done, viz. to put all the weight you can on the ladle and press downwards and not graze nor scrape the butter with the ladle and the tray thereby breaking the grain of the butter. When the butter had been sufficiently worked it was done up in a roll and weighed, there being exactly 4 lbs. or 1 lb. of butter from 4 lbs. cream. It was then put back in the tray and it was again worked for a few minutes. The butter after the salt had been worked into it properly it was again done up in a neat roll and presented to the meeting for inspection, and the verdict given was, "it is good." A vote of thanks was tendered the speaker and Mr. Robertson.

PENNAC.

JUNE 2.—Warm weather has come at last, as have also a few of those little musical pests, mosquitoes. Farming is progressing favourably, while some have finished.

On Monday, 23rd ult., Burpee Saunders, one of our enterprising young farmers, was married to Miss Maggie Pigeon, of Nashwaak. The ceremony was performed in this city by Rev. Mr. McDonald and the happy couple drove to their future home where a large number of immediate friends had gathered for the reception. We wish them a happy and prosperous journey through life.

Since noting the above we learn that John Gilmore and Miss Marada Bahar have this afternoon entered into a life partnership. The contracting parties drove to Marysville where the knot was tied. Congratulations.

The gospel temperance meeting on Sunday afternoon was addressed by Rev. Mr. Kinghorn and Messrs. Fross and Thompson of Fredericton. Mr. Thompson urged the members of Banner county to begin the erection of a hall, and gave some encouraging advice in the matter. We certainly need a hall and hope yet to have one; but such things require time for their accomplishment, especially in a locality where there is a strong opposition.

Mr. Henry Moore has resumed work on his house which he began last fall, and expects to have it ready for occupancy in about a month.

Mrs. John Dennison, sen., is paying a visit to her daughter in Kingsclere.

Mrs. Thomas Goodspeed has gone to Northampton, on a visit to her daughter, Mrs. Nelson Cluff.

TEMPERANCE VALE.

JUNE 2.—William Bartlett has gone to work on the Douglas boom and his absence is regretted by the people.

Daniel Wood is visiting friends at Waterbury on the steamed guest of Mrs. Geo. Week.

Mr. and Mrs. Chapman of this place have returned from Woodstock where they spent the winter.

Dennis on the boom, is making some extensive clearings on his farm preparatory to taking a bride.

Geo. Bartlett is putting forth all his energy in trying to make his store a success. He sells cheap.

It is reported that Wm. Fawcett is looking for a help mink. We wish him success.

Albert Fawcett has purchased a fine horse. The girls look for something better than walking. Hoe in Albert.

A great deal of damage was done by a small blizzard which passed over here on Thursday carrying off and destroying the roof of McDonald Bros two barns, also the roof of Wm. McElwain's barn. The fences for miles at a stretch have been torn down and carried fifty to seventy rods from their places. Cattle at large seemed to be frightened out of their wits. The wind was the strongest ever known here.

LOWER PRINCE WILLIAM.

JUNE 2.—Mr. Coy, insurance agent, spent last Sabbath with friends in this place.

Miss D. Henderson, of Houlton, Me., is the guest of Mr. and Mrs. T. Sawyer.

A pleasant wedding took place on the 25th ult., at the residence of the bride's father, when David Burden and Miss Lizzie Jewett were united, the ceremony being performed by Rev. C. Currie. The bride was the recipient of many pretty and useful presents. In the evening about thirty serenaders made things lively for a time.

Rev. A. G. Downey occupied the pulpit of the Baptist church here last Sunday morning.

The Baptist quarterly meeting will convene with the church here commencing Friday, June 10th.

Benjamin Kilburn, of Kilburn's Landing, Victoria county, made a short visit to his friends in this place during the week.

RUSAGORINS.

JUNE 1.—Rev. G. W. Foster and wife, of Tracy Station, paid us a visit on Friday last.

The Indians have returned to their old camping grounds at this place where they usually spend a few weeks about this time of year. They are busy making baskets of different kinds.

Owing to the low water this year, a large number of boom poles will have to be hauled some distance from where they were landed last winter to get them into water sufficient to float them.

A number of our men are now working at the Lincoln and Douglas booms.

Our village merchants report that he is doing a good business this season. Payments are coming in fairly well and the prospects are that he will have a good summer.

NASHWAAK VILLAGE.

Last Friday Thomas Shields was thrown from a wagon and his ankle was broken by the fall. Dr. McLellan attended the injured man and he is doing well.

Mr. and Mrs. Burt left here for St. Marys where they will reside in future.

Monday night a large number met at the new temperance hall to see the work and hear what Prof. Robertson had to say on butter making. The lecture had been well advertised, but the professor failed to put in an appearance, and the people would like to know what was the cause.

There was a basket social at the Durham Bridge, the proceeds of which were to buy a billiard table and make a dance hall of the temperance hall. June 2nd.

CENTRAL BLISSVILLE.

JUNE 1.—The spring has been a good one and the crops are flourishing.

Some of the lumber has not been got out into the main river owing to the lack of a freshet. A good many boom poles are on the bar, and reports that the water not having risen to take them off.

A service and Sabbath school are held each Sunday now in the F. B. church here. Last Sunday an extra service was held. Rev. Mr. DeWitt preaching an able sermon.

THE DREADED LA GRIPPE.

Following this scourge of humanity come a train of evils in the shape of obstinate colds, coughs, lung troubles, etc. There is no remedy so prompt, and at the same time effectual and pleasant, as Willmore's Cod Liver Oil Emulsion with Wild Cherry and Hypophosphites, which is the latest and best combination of anti-consumptive remedies. Price 50c. and \$1.00 per bottle.

Some men seem to be fond of flouging delusions, and it may be that they get in the habit because girls are such delusive creatures.

BEAUTIFUL HORSES.

Some Well Bred Youngsters that Claim Attention.

The great benefit which the country has realized from the government horse importation is only beginning to be comprehended. Having got some cream, hot and cold water, from a neighboring farm, he opened up his dairy and proceeded to exhibit some of the butter right in plain view of the meeting and invited questions from any one or every one, and a good many were asked and answered. After scalding the churn and other utensils he weighed the cream, 17 lbs., and warmed it to 65 degrees by the addition of a little warm water at which temperature it was churned for about 20 minutes or until the butter began to gather when it was cooled down to 62 degrees by putting in a little cold water and again churned for 25 minutes, the butter then being in particles about the size of wheat. The butter was then run off and a little water thrown in, and then drained off, more cold water put in and the churn turned three or four times slowly, and the butter was finished; this showing that the butter is better when the butter can be washed at this stage as compared with the method of churning until it is all in one big lump. After draining off the water, which was almost as pure as when it was put in, the butter was lifted into a cloth and allowed to drain, the remaining water out of it. He showed particularly how this should be done, viz. to put all the weight you can on the ladle and press downwards and not graze nor scrape the butter with the ladle and the tray thereby breaking the grain of the butter. When the butter had been sufficiently worked it was done up in a roll and weighed, there being exactly 4 lbs. or 1 lb. of butter from 4 lbs. cream. It was then put back in the tray and it was again worked for a few minutes. The butter after the salt had been worked into it properly it was again done up in a neat roll and presented to the meeting for inspection, and the verdict given was, "it is good." A vote of thanks was tendered the speaker and Mr. Robertson.

PENNAC.

JUNE 2.—Warm weather has come at last, as have also a few of those little musical pests, mosquitoes. Farming is progressing favourably, while some have finished.

On Monday, 23rd ult., Burpee Saunders, one of our enterprising young farmers, was married to Miss Maggie Pigeon, of Nashwaak. The ceremony was performed in this city by Rev. Mr. McDonald and the happy couple drove to their future home where a large number of immediate friends had gathered for the reception. We wish them a happy and prosperous journey through life.

Since noting the above we learn that John Gilmore and Miss Marada Bahar have this afternoon entered into a life partnership. The contracting parties drove to Marysville where the knot was tied. Congratulations.

The gospel temperance meeting on Sunday afternoon was addressed by Rev. Mr. Kinghorn and Messrs. Fross and Thompson of Fredericton. Mr. Thompson urged the members of Banner county to begin the erection of a hall, and gave some encouraging advice in the matter. We certainly need a hall and hope yet to have one; but such things require time for their accomplishment, especially in a locality where there is a strong opposition.

Mr. Henry Moore has resumed work on his house which he began last fall, and expects to have it ready for occupancy in about a month.

Mrs. John Dennison, sen., is paying a visit to her daughter in Kingsclere.

Mrs. Thomas Goodspeed has gone to Northampton, on a visit to her daughter, Mrs. Nelson Cluff.

TEMPERANCE VALE.

JUNE 2.—William Bartlett has gone to work on the Douglas boom and his absence is regretted by the people.

Daniel Wood is visiting friends at Waterbury on the steamed guest of Mrs. Geo. Week.

Mr. and Mrs. Chapman of this place have returned from Woodstock where they spent the winter.

Dennis on the boom, is making some extensive clearings on his farm preparatory to taking a bride.

Geo. Bartlett is putting forth all his energy in trying to make his store a success. He sells cheap.

It is reported that Wm. Fawcett is looking for a help mink. We wish him success.

Albert Fawcett has purchased a fine horse. The girls look for something better than walking. Hoe in Albert.

A great deal of damage was done by a small blizzard which passed over here on Thursday carrying off and destroying the roof of McDonald Bros two barns, also the roof of Wm. McElwain's barn. The fences for miles at a stretch have been torn down and carried fifty to seventy rods from their places. Cattle at large seemed to be frightened out of their wits. The wind was the strongest ever known here.

LOWER PRINCE WILLIAM.

JUNE 2.—Mr. Coy, insurance agent, spent last Sabbath with friends in this place.

Miss D. Henderson, of Houlton, Me., is the guest of Mr. and Mrs. T. Sawyer.

A pleasant wedding took place on the 25th ult., at the residence of the bride's father, when David Burden and Miss Lizzie Jewett were united, the ceremony being performed by Rev. C. Currie. The bride was the recipient of many pretty and useful presents. In the evening about thirty serenaders made things lively for a time.

Rev. A. G. Downey occupied the pulpit of the Baptist church here last Sunday morning.

The Baptist quarterly meeting will convene with the church here commencing Friday, June 10th.

Benjamin Kilburn, of Kilburn's Landing, Victoria county, made a short visit to his friends in this place during the week.

RUSAGORINS.

JUNE 1.—Rev. G. W. Foster and wife, of Tracy Station, paid us a visit on Friday last.

The Indians have returned to their old camping grounds at this place where they usually spend a few weeks about this time of year. They are busy making baskets of different kinds.

Owing to the low water this year, a large number of boom poles will have to be hauled some distance from where they were landed last winter to get them into water sufficient to float them.

A number of our men are now working at the Lincoln and Douglas booms.

Our village merchants report that he is doing a good business this season. Payments are coming in fairly well and the prospects are that he will have a good summer.

NASHWAAK VILLAGE.

Last Friday Thomas Shields was thrown from a wagon and his ankle was broken by the fall. Dr. McLellan attended the injured man and he is doing well.

Mr. and Mrs. Burt left here for St. Marys where they will reside in future.

Monday night a large number met at the new temperance hall to see the work and hear what Prof. Robertson had to say on butter making. The lecture had been well advertised, but the professor failed to put in an appearance, and the people would like to know what was the cause.

There was a basket social at the Durham Bridge, the proceeds of which were to buy a billiard table and make a dance hall of the temperance hall. June 2nd.

CENTRAL BLISSVILLE.

JUNE 1.—The spring has been a good one and the crops are flourishing.

Some of the lumber has not been got out into the main river owing to the lack of a freshet. A good many boom poles are on the bar, and reports that the water not having risen to take them off.

A service and Sabbath school are held each Sunday now in the F. B. church here. Last Sunday an extra service was held. Rev. Mr. DeWitt preaching an able sermon.

THE DREADED LA GRIPPE.

Following this scourge of humanity come a train of evils in the shape of obstinate colds, coughs, lung troubles, etc. There is no remedy so prompt, and at the same time effectual and pleasant, as Willmore's Cod Liver Oil Emulsion with Wild Cherry and Hypophosphites, which is the latest and best combination of anti-consumptive remedies. Price 50c. and \$1.00 per bottle.

Some men seem to be fond of flouging delusions, and it may be that they get in the habit because girls are such delusive creatures.

BEAUTIFUL HORSES.

Some Well Bred Youngsters that Claim Attention.

The great benefit which the country has realized from the government horse importation is only beginning to be comprehended. All sections now have fine horses, this is especially the case where the agricultural societies have been wide awake and have taken advantage of the splendid stallions that the local government thought worth the trouble to send to reach. Throughout Sunbury the class of horses has advanced much during the past few years and that county boasts that its style, weight or speed it can hold its own against any in the province.

Among the fine young horses, we may mention a black mare with white blaze owned by Geo. Seely of Central Blissville. She is a beauty, three years of age and well adapted for breeding purposes. She is by Knight of Chester, dam a good common mare, Perley Seely of the same place has a six year old grey, tracing breeding to John Knight, weight about
