IT HAUNTS ME STILL.

The Balfour Blood Bitters Bottle of Childhood Days, and What it Contained.

Wherever I see the snows beginning to melt and signs of spring, to make them selves unobtrusively known I remember with horror the springtime season of my boyhood. How mother used to dose us poor little unfortunates with home-made bitters! And we had to be the ministers of our own punishment. We had to scour the woods for ground hellebore, cherry bark and princess pine, which were to be stewed up together, mixed with liquor of some kind and then poured over our devoted throats to clear our blood and tone up our system. Ugh! the taste of it, like "her bright smile" in the old song—it haunts me still. Very often there was wormwood in it. Next to the little sulphur bags we wore around our necks at school to ward off the itch, the bitters bottle, a huge black one, was one of the terrors of existence. How much more fortunate are the people, old and young, today, who can purify their blood and tone up their system in the springtime by a mild and pleasant course of Hawker's Liver Pills and Hawker's Nerve and Stomach Tonic, the most thorough and effective combination in the form of spring medicine ever placed before the public.

That tired, depressed and exhausted feeling which so many suffer at this period of the year, is a sure indication of a weak and debilitated state of the system. Sleeplessness, Dyspepsia, Mental Inactivity, Irritability and other symptoms of a disordered state of the system gradually follow. Hawker's Nerve and Stomach Tonic is a certain cure when faithfully used in any nature. Hawker's Nerve and Stomach Tonic can be obtained from all druggists and dealers. Price 50 Cents a bottle or six bottles for \$2.50. Pills 25 Cents a box.

FARM AND FIRESIDE.

Timely Hints Useful to the Farmer and His Household.

Did you ever notice that on the top of a load of coarse coal you can throw half a ton of fine coal? It's there, all the time; it just fits in and fills the gaps between the lumps. So it is, and should be, with poultry on most farms. The horses, cattle, sheep and swine mainly occupy the attention of the stock grower; the corn, wheat, oats, etc., are first considered by the general farmer. But either man, without losing a dollar in his general line of work, and with a very slight expenditure of time and money, can reap from \$50 to \$250 per year by filling up the corners of his yards and his time with poultry.

Laying aside the aesthetic side of the question—the pleasure and culture to be derived from a carefully tended flock of pure breeds, and failing to reckon the convenience and helpfulness of having always at hand a good supply, for the home table, of nice fresh eggs and palatable poultry, the clear profit from fifty hens, well kept, are usually four times as great as the same investment of time and money in any other branch of farming.

The villager who buys at retail, for cash, all the food consumed by his hens, makes an outlay in this direction of about \$1 for every dozen eggs he produces. It has been shown by different poultrymen that the natural product, at regular market prices, of a well-depicted and well-cared-for hen is worth from \$2 to \$3 a year, leaving the owner a net profit of from \$1 to \$2 on each hen. Supporting that the farmer does not get his hens to take hold of his scheme as enthusiastically, his outlay for feed is at least 50 cents per hen, owing to the better foraging facilities and less grain, with that at wholesale prices, so that his profits are not less than his village competitor.

The main difficulty in persuading farmers to believe there is something in this business, if managed right, is the difficulty of inspiring them with sufficient faith to make them manage it right for a whole year. Spurious stocks for a short time will not do the business. Continuous persistent attention is needed. There is a steady call for first-class poultry products. To be rated as first-class, all marketable products must be neat and clean, and as far as possible, uniform in size and color. Once more we urge those who have not tried it, or those who have failed at it, to dispose of their dung-hill fowls that they are ashamed of, and then act as though they were ashamed of them; clean up, probably better burn down, the chicken house, and put up a neat, well arranged, but inexpensive house in a sunny, protected place; buy a dozen nice, uniform, well-developed pullets, either of the American, Asiatic, or Mediterranean breeds; give them the best feed you can get, and keep them in their yard in their grain before letting them out. Then open the door wide and let them rush. There should be a great abundance of trough room. I prefer to have the troughs placed against the fence so that the sheep can get jump over them. While they are out I put hay in the racks, putting in only what they will eat up clean, provided the hay is good. Should there be any left at next feeding time it is cleaned out and given to the horses, not to the cows, who will eat it before being taken to the stalls. If their troughs are in their yard I put in their grain before letting them out. Then open the door wide and let them rush. There should be a great abundance of trough room. I prefer to have the troughs placed against the fence so that the sheep can get jump over them. While they are out I put hay in the racks, putting in only what they will eat up clean, provided the hay is good. Should there be any left at next feeding time it is cleaned out and given to the horses, not to the cows, who will eat it before being taken to the stalls. While they are out I put hay in the racks, putting in only what they will eat up clean, provided the hay is good. Should there be any left at next feeding time it is cleaned out and given to the horses, not to the cows, who will eat it before being taken to the stalls. If their troughs are in their yard I put in their grain before letting them out. Then open the door wide and let them rush. There should be a great abundance of trough room. I prefer to have the troughs placed against the fence so that the sheep can get jump over them. While they are out I put hay in the racks, putting in only what they will eat up clean, provided the hay is good. Should there be any left at next feeding time it is cleaned out and given to the horses, not to the cows, who will eat it before being taken to the stalls.
