PLOUGH. THE Subscriber as manufacturing different sizes of SAYER'S PATENT NEW BRUNSWICK PLOUGHS, which are considered by those who have used them, to be superior to any others now in use in this Province. The peculiar advantage of those Ploughs consists in the gentle convexity of surface which it presents to the soil, making it easy of draught, turning the sod well, and preventing any clogging of the earth to the mould hoard. The Share is made of a peculiar description of iron and chilled, making it falls against the pieces which give it an advantage over the ordinary kind, as the upper part will wear out a number of the lower or sole pieces by which a very great saving is made. I also east the mould boards for the above mentioned ploughs as well as for other kinds, on patent chilis which makes the wearing surface hard and equal to any steel plough. The adward.
