

brook was very severely bruised, and Lawrence had a collar bone broken. McDonald's body was found and removed shortly after the accident. . . . A correspondent of the *Telegraph* writing from Upper Gagetown on the 11th says:—On Saturday night, at Mr. Henry Coy was returning home, about midnight, he noticed a man going towards his barn. He hailed him, and asked where he was going, and what he wanted, and received the reply "I am looking for Mr. Guter's place," or something like that. After a few words the man left and Mr. Coy went into his house, and awoke Mr. Charles Calkins, who lives in the house with Mr. Coy. Mr. Calkins got up, dressed himself, took a revolver and went out, accompanied by Mr. Coy. They went up the road till near the Free Baptist meeting house, a distance of perhaps fifty or sixty rods, and there found Mr. Titus, with whom Mr. Calkins had traded horses. Mr. Titus had taken the horse from Mr. Coy's barn, and Mr. Calkins kept him. Mr. Calkins demanded the animal, but Mr. Titus refused to give the horse up, and in the melee which ensued the revolver was fired, the one shot taking effect in Mr. Titus' leg, the other in his foot. Some of the neighbors were aroused, and the combatants separated. Mr. Calkins returned with the horse, and Mr. Titus was carried away in his wagon threatening law. . . . Mary Ann Richardson was arrested at the King's County Court of having stolen money and valuable securities from the house of William Allen, of Sussex, and was sentenced to three years imprisonment in the Penitentiary. She and her husband, it will be remembered, escaped from the King's county goal, and after several days were captured by the Sheriff.

A SERIES OF FORGERIES.—On Friday morning last a man calling himself A. L. Haddock, called at the Bank of British North America in this city, and presented a circular letter of credit for \$4,000, purporting to be issued by the branch Bank in New York. The letter was given him for \$3,000 on it. The letter showed that it had been paid \$300 on it at the branch in Montreal, for which amount it was endorsed. The letter appeared to be correct. "Mr. Haddock," we quote the *Globe*, "was sent into the Manager's room, and Mr. McLehlan ordered the amount to be given him. Mr. McLehlan had no conversation with the man. Mr. Cumberland, the teller, paid Mr. Haddock the \$3,000 in \$100 and \$50 notes, and the satisfied traveller departed with his money. Mr. McLehlan, thinking the matter over afterwards, had his suspicions excited regarding the matter, and he telegraphed to New York for information, and the letter. In the afternoon a despatch was received from Mr. McNab stating that the letter of credit was a forgery. The police were at once apprised of the fraud. It being suspected that Mr. Haddock would try to leave by the afternoon train for Fredericton, officers were dispatched to watch his departure. Policeman Wm. Evans, accompanied by Mr. Cumberland, went to Fairville, and there found Mr. Haddock with him a small to go on board the train. The prisoner was brought back, and placed in the lock up. He denied all knowledge of the affair, and said his name was King. He was searched, but neither money nor letter of credit was found. It is evident then, if the right person has been secured, that he had an accomplice, to whom he passed the \$3,000 and the letter."

Referring to this case, the *Telegraph* says, it is a pity that to only one of the attempts, made almost simultaneously in Canadian cities, on the branches of the same Bank, some of which succeeded, others failed. On Thursday last a letter arrived in St. John's, New Brunswick, of a large in stature, with a large nose, and walking very erect. He was faultlessly dressed and had the appearance of a sporting man travelling for pleasure. His only baggage was a large trunk, and he was travelling by himself. He was seen by the New York agent of the Bank, on the paper, and in the register printed form of the agency, which it was impossible to possibly counterfeiting. The letter of credit was for three thousand dollars, and on it a payment of three hundred was marked. He was given the balance, two thousand seven hundred dollars, and took his departure. Shortly before 6 o'clock in the afternoon he paid his bill at the hotel, giving a four dollar note of the Bank of British North America, and he then left with his small satchel. He walked through Hollis and Granville streets to the corner of George street, where it is supposed he took a street car for Richmond Street, and then went on board the night train for this city. The Bank officials did not discover until Friday that the letter of credit was a forgery. It is reported at St. John's that on Thursday last the Branch of the same Bank at that place was victimized by a forged letter of credit, but to the relations of the Bank officials on the subject, no particulars have been given. Our graphic correspondent states that the matter was kept quiet.

NOVA SCOTIA.—The grand jury of Hants, N. S., refuse to grant liquor licences. . . . There were shipped from Spring Hill to Dorchester in the month of September four thousand tons of coal, all from the Spring Hill mines. . . . More gold has been discovered at the Jackson property, fifteen miles from St. John's. . . . A drunken halibut has made an unsuccessful attempt to chop off his head, being shot by the store of Thaddeus Allen, at Kingston, N. Y., was entered by burglars on Monday night, and goods to the value of \$100 taken therefrom. . . . Kentville, N. S., is invested with tramp. Mr. Moore's new building, on Main street, was broken into last week and a number of bags of grain taken. . . . A Canning correspondent writes the *News* that the crops in Queen's county are for the most part good. The hay is somewhat damaged by dull weather, but is an abundant crop nevertheless. . . . And when the weather becomes more genial, grain. That little pest, the weevil, has disappeared. That should encourage the farmer to sow broad acres of wheat. Some species of the potato yield light, especially the Owen. Were you to compare the harvest of New Brunswick, generally, with that of Queen's county, should say there is no danger of destitution during the coming winter. . . . The Local Government of Nova Scotia, offer a reward of \$200 for the discovery of the person who on the night of the 23rd and 24th inst., destroyed the Victoria Bridge, River Habitant, C. B., and one of \$200 for the discovery of the persons who on the 12th set fire to Mr. John Frosse's saw mill at Waterloo, Lunenburg Co. . . . Nova Scotia, and particularly the city of Halifax, has lost considerably of late by shipping disasters. The most recent is the brig, "Elizabeth," of Halifax, which went ashore and became a total wreck on "Phillips Reef" on the 25th inst. . . . The "Elizabeth" left Halifax on the 5th inst. for Port-au-Prince, Hayti, with a cargo of fish, lumber, etc., was a vessel of 141 tons register, built at Mahone Bay in 1889 by Mr. Titus Longille, owned by Mr. J. M. Watson, and commanded by Capt. Thomas Dale. She was insured for \$8,000 in Halifax offices, and \$2,000 in the Nova Scotia. Phillips Reef is situated to the Northwest of the Passage. . . . A visitor to the spot where the passenger of the ill-fated steamer *Atlanta* was buried, on the rocky coast of Terrence Bay, writes to the *Chronicle* complaining that the lot of ground where the bodies were interred "is encroached by a slight fence of wood, which is rapidly falling into decay. The care of the missionary there scarcely suffices to prevent the desecration of the spot by the wandering cattle," and the names of the dead which were known, and written with red chalk on pieces of wood, are nearly obliterated. The writer says "God's Army" should be protected. . . . A despatch to the *Telegraph* on the 11th inst., from North Sydney, C. B., says—There was a heavy south-easterly gale and rain here last

night. Several vessels dragged their anchors. The barkentine *Pearl*, of St. John's, Nfld., collided with the brig, *Magdala*, of St. John's, N. B.; both were badly damaged. The pilot John, of St. John's, N. B., is lying at the wharf considerably damaged. The schr. *Halstead* of St. John, and the bark *Camelia*, of St. John's, Nfld., are injured. The latter is just off slip. Several buildings were blown down, but there were no accidents to life. Towns damaged and traffic greatly suspended. According to the despatch to the Press Association, it is reported in Portsmouth that all Her Majesty's ships in Japanese ports have been ordered to China. The sessions of Japanese Parliament were closed by the Emperor, who said relations of Brazil with foreign powers were satisfactory, and amnesty granted Bishops if they would restore harmony with the Pope. Consuls consider unless Turkey determines on radical reform in Herzegovina, that province will be lost to her. It is stated that Lieut. General Sir Frederick P. Maude, commander of troops in the Government of Madras, will succeed Lord Napier, of Magdala, as Commander-in-Chief.

Germany will demand this year 6,000,000 marks to military expenses. . . . The Kaiserhof hotel, of Berlin, has been burned. Loss \$100,000. The English steamer "Biscay," belonging to Newcastle, stranded off Iceland on the voyage from Newcastle to London, and was wrecked. The "Biscay" was an iron steamer, built in 1873, and owned in London. The ship was carrying a cargo of coal, and was bound for Turkey. She was mutually agreed to withdraw her troops from the frontier.

An item in the *Gazette* at Pekin, states that the demand of the English Minister for proper treatment of foreigners, including protection of property, Margaria's murderers is still in abeyance. The prospects are not now so favorable for an ultimate settlement. The Prince of Wales departs on his visit to India this evening, accompanied as his Calais by the Princess Alexandra.

London, Oct. 13.—The Spanish Minister to the Vatican has presented a note relative to the Concordat. . . . Saballa goes to Switzerland. Spain intends to demand his return as a nobleman. A great fire is raging in the timber yard, at Santander. The Times Vienna special says, European Powers have exchanged ideas regarding financial affairs and policy of Turkey. France has not declared her opinion. None of the other Powers are yet grounded for reconstruction. The Consul of Liberia has given to the press reports of the progress of the war of the Liberians against the Caribarian tribes. It says that five engagements have been fought in all, in which Liberian arms were successful.

Letters received from Captain Allen Young, of the "Panama," dated Aug. 6th, and Aug. 10th, report voyage to the Gulf of Mexico, and the capture of a large number of slaves. In some localities, where only a few were found, the slaves were taken to plant, for fear the grasshoppers would eat everything, the crops have been most satisfactory, and have done much to confirm the idea that the people were too much frightened. The Winnipeg Standard finds the belief prevalent that we have seen the last of the pest for some years, it has not yet.

OTTAWA, Oct. 9.—The *Gazette* this afternoon contains the following appointments: Chief Justice Richards to be Chief Justice of the Supreme Court. To be Justice of the Supreme Court, Chief Justice Richards, Mr. Justice Evans, Mr. Justice Tupper, Mr. Justice Gwynne, Mr. Justice Strong, Ont.; Justice Taschereau and Hon. Mr. Fournier, Quebec; and Hon. Mr. Henry, Nova Scotia.

Thomas Moss is gazetted as Strong's successor; Justice Tupper as Justice Taschereau's; Justice Allen as Justice Richards'; Mr. Harrison, Q.C., as Justice Gwynne's; and Mr. Fournier, Q.C., as Justice Strong's. Other appointments made are J. Dorion, of Montreal, to be Justice of the Supreme Court in Quebec; and Charles Duff, of St. John, to be one of the Justices of the Supreme Court in Nova Scotia. R. Cassels is to be Registrar of the Supreme Court.

"KNOW THYSELF." That great creator, profound thinker, and vigorous writer, Herber Spencer, has wisely said: "As vigorous health and its accompanying high spirits are larger elements of happiness than any other, it is impossible to overstate the value of health, which is a teaching that leads to no other whatever." This is sound sentiment, and one great want of the present age is the popularization of Physiological Hygiene, and Medical Science. No subject is more practical, none comes nearer home to every man and woman than this. "The People's Common Sense Medical Adviser," in Plain English, or, Medicine for the People, by Dr. J. C. Moore, M.D., is a book well calculated to supply a manifest want, and will prove eminently useful to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound. It is a complete compendium of anatomical, physiological, hygienic, and medical science, and embodies the latest discoveries and improvements in each department. It has been the author's aim to make the work instructive to the masses, and hence the use of technical terms, illustrated with over two hundred and fifty woodcuts and colored plates, is printed on good paper, and well bound.
