FRINK'S REFLECTORS.

The time has long gone by when halls and public ouildings had to be insufficiently lighted with a few scattered gas burners or oil lamps, and the powerful reflectors that now throw their light upon audiences that are gathered in our large buildings tell luminously of the progress of the age, and the inventive genius of Mr. I. P. Frink, by whom they are chiefly made. The forms of this reflector are so familiar that it is not necessary to describe them, as there is hardly a hall or a church in the country, of any pretensions, where they may not be found, and we presume it is safe to say there is not one where they ave not answered perfectly at all that is claimed for them. The heat of the lamps or gas draws up the foul air which passes through an opening in the reflector, thus keeping the atmosphere free from noxious oders and substances, whilst the reflection obtained from it is superior to any other form of lamp or burner in use. It is stated by those who Every subscriber, in sending his subscription use it that the economy of the arrangement is reshould give his correct Post Office address. He markable.
