WATERING THE STOCK

Four Rules That It Will Pay to Know and Observe

An unlimited supply of good pure water is essential to the health of all animals used for farm purposes. Pools formed from surface drainage where large quantities of organic matter are carried into them, and wells or pools contiguous to farmyards or manure heaps are especially to be avoided. Water from good tanks or wells, running streams, and properly-constructed pools is usually good, but too much care cannot be taken in reference to this matter. The quantity of water is also of importance. No animal will drink too much if watered sufficiently often, hence there is no necessity for limiting the supply except when the animal has been deprived of water for too long a time. Animals at rest should be given water at least three times a day in summer, and twice a day in winter, if they cannot have free access to it at all times. There is a common error that horses should not be watered when warm. An animal is never too warm to be watered if not more than two gallons be given. A large quantity of water will injure an animal at any time, but especially is this so when he is very warm or much fatigued.

The watering of animals immediately after feeding, so frequently practised, is not in harmony with the physiology of digestion. The stomach of a horse is very small in proportion to his size and the quantity of food he consumes, hence only a small amount of water can remain in the stomach, and if given immediately after feeding undigested food must of necessity be carried with it in its passage through the stomach into the intestines. Another reason why animals should not be watered immediately after feeding is that the digestion begins only when the food has been warmed to a temperature of about 90 degrees; therefore if a large quantity of cold water be mixed with the food the temperature of the contents of the stomach must be lowered and consequently digestion must be retarded.

TALKING TO BABY

Words Should be Properly Pronounced When Child is Four

Is "baby talk" bad for babies, and are fond parents who indulge in it when dandling their latest born in their arms committing themselves to a harmful as well as foolish habit?

"Baby talk" has existed ever since there were babies and is the result of two distinct things. First, articulation never reaches full development until the age of five or six, and that causes distortion of words, such as "ickle" for "little," and "sing" for "thing." Secondly, the baby mind receives an impression of the character of a thing by what it does, and so describes a train, for example, as a "puff-puff" or "toot-toot."

It naturally follows that a baby when very young more easily comprehends "baby" talk than it would plain English terms.

At a kindergarten babies are taught to speak English properly by encouraging them to imitate the teacher, and parents would certainly help in the education of their little ones if they dropped "baby talk" after a certain period—at about four years of age.

An authority on the education of very young children stoutly defends talking "baby talk" to babies up to a certain period, which she places at four years of age. "After that," she says, "I think it would be distinctly harmful to the baby and foolish in the parent."

"Banish 'baby talk'!" she exclaimed. "Never! We should have dumb babies if that could be accomplished. It is very, very often the baby's aid to speech when the mother talks 'baby talk' to it, and it is all very charming and sweet."

WHITENED HAIR

Divergent Opinions as to Change of Color Over Night

One reads occasionally in novels and other literature of cases in which a person's hair was turned white within one single night, under some severe mental stress. An alleged historical case of this kind is that of Marie Antoinette. The true cause of the bleaching of the hair is a matter of some dispute, says a scientist who, investigating a case of sudden greying of a man's hair reported that the inner canal of the hair had become filled with small air bubbles, which imparted to it its white appearance. According to another physician on the other hand the phenomenon is due to the destruction of the hair pigment by the phagocyte cells. Others deny altogether the truth of reports of sudden bleaching, or assert that where it has occurred this may have been due simply to the fact that the person in question was suddenly placed under circumstances compelling the discontinuance of the practice of hair dyeing.

The Shape of the Head. Scientists declare that during the last quarter of a century the shape of the human head has altered owing to the development of mental power, caused by the ever-increasing educational facilities.

Size is of no consequence. It is the shape that tells. Twenty-two to twenty-three and a half inches is a standard for the literary type of head of the first order, but powerful intellects are indicated by heads measuring up to twenty-four and three-quarter inches.

Heads indicative of skill in mechanism, detail, and manufacturing work are usually large, rather wide about the ears, and with a broad, although not necessarily high, forehead. The broad, protruding Beethoven forehead indicates musical skill.

WHEN SCIATIC PAINS

BURN LIKE FIRE

RUB IN 'NERVILINE'

It Kills the Pain, Cures the Suffering Destroys Every Trace of Sciatica

READ THIS INTERESTING LETTER

"I think you ought to make your claims stronger about the marvellous power of Nerviline on Sciatica and Lumbago." This is how Mrs. A. C. Corrigan opens her letter, written from Victoria. "So many people are suffering and so few get proper treatment that I am anxious that thousands should know of how Nerviline cured me. Sciatica is just about the most awful pain humans are called upon to bear and in my case there was at times the additional misery of Lumbago. Nothing attracts attention to particular forms of suffering like personal experience and that is why I am so enthusiastic about Nerviline. I had the luck to be the right remedy (Nerviline) almost at the beginning and cleaned it right out of my system. But most people use the wrong remedy and get sciatica in chronic form. Nerviline cures the pain at once and stops the inflammation before it becomes chronic. I say that a liniment that has power enough to kill the pain of Sciatica is a remedy everybody should know about for it would snuff out in a wink little ailments like Neuralgia, Lumbago, Strains, Tired Muscles and inflammation from cold."

No home should ever be without Nerviline—get the large 50c. family size; trial size 25c. at all storekeepers and druggists, or The Catarhozone Co., Buffalo, N.Y.

GROWTH OF LANGUAGE

English Dictionary of 1616 Contained Only 5080 Words

Roughly speaking, the English language may be said to grow at the rate of 5,000 words a year. At least, that is the average growth by the measure of the dictionaries. Bullock's "Complete English Dictionary," in 1616, the year of Shakespeare's death, contained 5,080 words. Thomas Blount's "Glossographia" (1656) improved on this and was superseded in its turn by Edward Phillips' "New World of English Words" (1658), a small folio containing 13,000 words; and by the time it reached its sixth edition (1706) the number had grown to 20,000 odd. Johnson's dictionary published on April 15, 1755, though it improved all predecessors off the face of the earth by the perfection of its system and the soundness and breadth of its wording contained only 50,000 words, and it remained master of the field, even at this modest total, until Noah Webster's came along in 1828, and Worcester's "Comprehensive Pronouncing and Explanatory English Dictionary," in 1830, with 160,000 and 105,000 words respectively.

The latter part of the nineteenth century kept the ball rolling. The "Imperial Dictionary" contained 200,000 words, and Dr. Funk's "Standard Dictionary" (1894) entered the field with half as many again—318,000 words in all. There have been half a dozen editions of this, and the next new one will reach the high water mark with a total of 450,000 words, most of which are English beyond question.

Mail Agencies

The Daily Mail is on sale each evening at the following places:-

Alonzo Staples- Drug Store, York Street.

Robert Embellton- Grocery Store, York Street.

Patrick Burns- Grocery Store King Street.

J. E. Saunders - Grocery Store, Northumberland Street

Miss Dunlop- Grocery Store Northumberland Street.

Miss Quinn- Grocery Store, Westmoreland Street.

D. Lenihan- Grocery Store, King Street.

W. P. Grannen - Regent Street.

James W. Fanjoy- Grocery Store, George Street.

Parent, Bird & Co.- Grocery Store, Cor. Queen and York Streets.

D. H. Crowley-Queen Street Opposite Mail Office.

DESIRABLE HELP WANTED

The Canadian Cottons, Ltd. have excellent positions for desirable Female Help at their large Marysville Mill.

The operation of the Company's new machinery necessitates the employment of additional help; families with female help preferred; good steady employment at most satisfactory wages. Comfortable Mill Hotel. Houses at low rents and fuel at actual cost. Parties desiring particulars of openings, Address,

S. C. WOODSIDE, Supt., Canadian Cottons, Ltd. Marysville, N. B.

AUTOMOBILE, MOTOR BOAT, AND BICYCLE REPAIRS. AGENT FOR TUDHOPE AUTOMOBILES, "THE CAR AHEAD". PERFECT BICYCLES, COLUMBIA BATTERIES

"In the Case of MY Little Girl—"

In choosing and using a soap for your "Little Fairy" you will find no soap so mild, so neutral, so agreeable to tender skins as FAIRY SOAP.

Being made from products that you could eat, FAIRY SOAP agrees with even the tender skin of a babe.

FAIRY SOAP

is white—pure—floating. It comes in a handy oval cake. We could charge you five times the price asked for FAIRY SOAP and we could add nothing to its quality.

In higher-priced soaps you are paying for high-priced perfume and fancy wrappers—not better soap.

Made by THE N. K. FAIRBANK COMPANY, Montreal

"Have you a little 'Fairy' in your home?"

FALL MILLINERY

On Thursday September the Eleventh and following days Miss Morgan requests the pleasure of a visit to inspect the collection of Paris, London and New York Models.

Tailored and Outing Hats for early Fall Wear, Children's Hats, also the Newest Ideas in Millinery Trimmings. Miss Morgan has just returned from London and Paris and Miss Coraum the trimmer from New York.

Miss Morgan YORK STREET

:- FALL MILLINERY :-

You are cordially invited to visit the Millinery Parlors of MISS S. C. KELLEY and see the Latest New York and Parisian Models.

Queen Street . . . Opposite Soldier's Barracks.

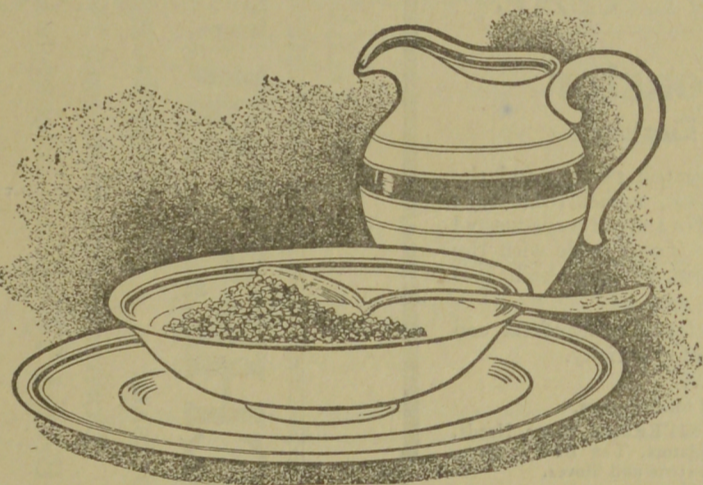

A Beautiful Display

of Osprey, Paradise, Osprey and Ostrich Plumes in all colors. Velour, Beaver, Felt, Plush, Velvet and Silk, Beaver Hats in all styles, also a large assortment of Flowers and Novelty Feathers.

Children's Headwear of All Kinds.

A Suggestion for Digestion

Many persons suffer more or less from headache, dizziness, biliousness, and symptoms common to indigestion. There are various causes, such as over-starchy or greasy foods, improper mastication, or bad cooking.

Grape-Nuts

Solves the digestion problem.

This food, made from prime whole wheat and barley, is perfectly baked until the starch cells are either converted into easily digested grape-sugar, or thoroughly broken down for quick digestion—generally in about one hour.

There is no animal fat in Grape-Nuts.

The crisp granules of Grape-Nuts come to your table ready-to-eat direct from package, invite thorough mastication and have a peculiarly sweet, nut-like flavor.

Grape-Nuts, containing all the rich elements of wheat and barley, including the vital mineral salts, is a perfectly balanced food for building muscle, bone, brain and nerve.

Grape-Nuts is probably the longest baked, the best balanced, and the most easily digested of all cereal foods. Wonderfully appetizing with cream and sugar.

"There's a Reason" for Grape-Nuts

Canadian Postum Cereal Co., Ltd., Windsor Ont.
