Hon P. J. Veniot Handed Out Some Hot Stuff to the Opposition Critics

(Continued from Page One)
Assembly Chamber, March 9, 1922. The House met at three o'clock. Notices of enquiry were given for Wednesday next as follows:
By Mr. Dickson: As to expenditures incurred in replanking Campbell Bridge, Kings County; as to what disposition was made of the Condola Point ferry boat, and as to expenditures made on the Rothesay road.
By Mr. Hunter: As to the amounts of money expended on trunks, secondary and branch roads during the last fiscal year.
By Mr. Smith (Albert): As to the quantity and value of the liquor in the government warehouse and as estimate of the quarterly sales.
HON. MR. ROBERTS submitted the annual report of the Chief Medical officer of New Brunswick.
HON. MR. BYRNE laid on the table the amendments to the Judicature Act and rules of court.

Hon. Mr. Veniot.
HON. MR. VENIOT, on the order of the day being called, resumed the debate on the address and the proposed amendment thereto. He congratulated the hon. mover and seconder of the address and with respect to the lat-

HEARTBURN A SEVERE CASE

Many people are troubled with heartburn who really do not realize just what it is.
In cases of this trouble there is a gnawing and burning pain in the stomach attended by disturbed appetite. It is generally caused by great acidity of the stomach, and whenever too much food is taken, it is liable to ferment, and becomes extremely sour, causing heartburn. In such cases vomiting often occurs, and what is thrown up is sour and sometimes bitter.
The one way to get rid of heartburn is to keep your liver active by using

MILBURN'S
LAXA-LIVER PILLS

and you will have no heartburn or other liver troubles such as constipation, jaundice, water-brash, floating specks before the eyes, coated tongue, foul breath, etc.

Miss Agnes Cutting, Shallow Lake, Ont., writes: "I have had heartburn for a long time. There were gnawing and burning pains in my stomach, and then when I vomited there was a sour and bitter taste. I used two vials of Milburn's Laxa-Liver Pills, and they have cleared me of my heartburn. I don't think they can be beaten by any other medicine."

Price, 25c a vial at all dealers, or mailed direct on receipt of price by The T. Milburn Co., Limited, Toronto, Ont.

FLORENCE BELLAIRE
200 Montague Street, Brooklyn, N. Y.

ter he took occasion to express thanks on behalf of the Acadian people to the English speaking members for the kind words of congratulations which they had extended to his hon. colleague early training in the use of the league. As one who had the benefit of English tongue he knew something of the difficulties under which the hon. seconder of the address had labored without such training. He was glad to see his English speaking colleagues speak words of encouragement to the Acadian members of the House as it was very helpful to them in carrying on their work. Of the late John Vanderbeck, who had passed away during the year he wished to say that he had enjoyed his political and personal friendship for many years and he felt sure that nobody regretted his death more keenly. He wished to express his condolence to the family, especially to the son who had been chosen to succeed him.

The Past Recalled.
With regard to the hon. leader of the opposition, he (Veniot) being one who always played the game fairly, it was a question whether or not he would be justified in extending congratulations. When he looked back at the record of some of those who had preceded his hon. friend he could tell him that he had undertaken a difficult task, and he scarcely felt that he would be doing full justice to the hon. member were he to congratulate him on being the successor of those who had gone before him. The hon. member had made use of some language which he considered was unkind and uncharitable. He had referred to the minister of public works as the spendthrift of a spendthrift government, and said that he had carried on a carnival of extravagance. If his hon. friend had the experience of some of those who sat near him, especially the hon. senior member for York, he would scarcely have dared to make use of such language. In doing so he had opened the door for a review of the record of his own party, and he (Veniot) wished to tell him that it was not one of extravagance, but a carnival of graft and corruption. He would admit that Sir J. D. Hazen had given the province a clean administration, but from 1912 until 1916 under his successors there was a carnival of corruption. One leader was forced to resign office, after an attempt had been made by his legislative followers to apply a coat of whitewash. He did not like to speak of the dead, but he wanted the members of the Progressive group and the Independent members to be acquainted with the facts. When the late Mr. Clarke took over the premiership he was in delicate health and not able to give close attention to all details of his office, but had been surrounded by proper lieutenants he would not have gone to his grave with the stain on his character which had been left by a statement made in the House by the late member for St. John county. It was Mr. Baxter who had declared that the scandal which grew out of the patriotic potato transaction came from a suggestion made by the Hon. Mr. Clarke. The shortage had been covered up, but it was done by means of political graft. Mr. Clarke had been replaced by Mr. Murray, who was eventually forced out of the party leadership by his own party, who in a resolution placed before the House had "deprecated" his conduct in connection with the patriotic potato transaction. Under the circumstances it was but natural that he (Veniot) should sympathize with the hon. leader of the opposition because of his being surrounded by some of the same men who had condemned the conduct of one of his predecessors. He trusted that if he ever became leader of a government he would be able to avoid the pitfalls that had overtaken other leaders of his party.

Not in Order.
The amendment to the address proposed by the hon. member for Charlotte had been more in order had it been submitted when the House was about to go into supply. Had the budget been brought down and no indications shown of the intention of the government to practice economy. (Continued on Page Three.)

HAD BAD COUGH AND SORE THROAT

Never neglect a cough or cold however slight. If you do it can have but one result; It leaves the throat or lungs, or both, affected. A single dose of

DR. WOOD'S
NORWAY PINE SYRUP
will help to stop the cough, soothe the throat, and if the cough or cold has become settled on the lungs the healing virtues of the Norway pine tree along with the soothing and expectorant properties of other excellent herbs, roots and barks promptly eradicates the bad effects, and the persistent use cannot but help to bring about relief.

Mr. Albert Marsh, Lower L'Ardoise, N. S., writes: "About a year ago I contracted a cold accompanied by a very bad cough and sore throat. I sent for the doctor, but what he prescribed did me so little good I began to get discouraged. A friend came to see me and asked me if I had ever used Dr. Woods' Norway Pine Syrup. I told him I had not and sent him right away to get me a bottle. I started using it, and after a couple of days I found I was getting relief, and after taking two bottles the soreness in my throat seemed to be leaving me, so I resolved to continue its use, and after I had used five bottles both my sore throat and cough were gone. I would not be without "Dr. Wood's" for any money."

Price 35c and 60c a bottle. Put up only by The T. Milburn Co., Limited, Toronto, Ont.

PALMER'S
Moose Head Brand
Summer Packs & Plow Shoes

SLIP on a pair of Palmer's Summer Packs or Plow Boots, and you will realize what Farm Foot Comfort really means. Added to this, you have strength and durability, making a combination of good features seldom found in one pair of boots.

Palmer's Summer Packs and Plow Boots are made and hand sewed by expert workmen. The bottoms and uppers are made from Palmer's Famous Skowegan Waterproof Leather, rich dark brown in color, very soft and pliable. Bottom part of uppers runs clean under, a great advantage over the lasted under boot. Soles are attached by special clincher nailing process or sewed by lock stitch process.

A splendid boot for plowing or any kind of hard outdoor work.

Get a pair from your dealer, or order direct from us. Write us for our catalogue No. 43.

Economical Trench Silo

At the recent dairymen's convention at Regina Mr. G. H. Hutton, superintendent of agriculture and animal industry of the C. P. R. department of natural resources at Calgary, gave an interesting description of a trench silo. He said:
"During recent years it has not been a very serious problem to make money in dairying, inasmuch as the prices of butter and cream and whole milk have been ruling relatively high during that time, and the man who gave his business the serious consideration which it should receive has been able to show a satisfactory return on his investment."

"However, with the decline in values of all dairy products which has taken place during the last 12 months, and which, according to certain forecasts will continue for another six months, the question of reducing costs of production becomes a very live and important problem."

"Cattle give best results when supplied with an abundance of succulent fodder. June pastures have frequently been named as the ideal condition for economical production of milk and beef. If by a system of pickling grasses or similar fodders we can make them available for a much longer period or even during the entire season when good grass is out of season, we will have accomplished a result which will contribute toward the production of maximum quantities of milk and butter fat at minimum costs. Such a result can be achieved by the use of silos and silage crops."

"The sunflower will set aside some of the objections which might be raised to the other ensilage crops. First, it is superior to corn for dry areas, as it outyields that crop during years of low precipitation. It is a crop which responds quickly to an increase in rainfall or to irrigation, as we have secured yields of over 34 and a half tons of sunflowers to the acre on irrigated ground, while this season we secured a yield of 12 tons to the acre on dry land and during a very dry season. Second; on the other hand the sunflower crop germinates and grows at a lower temperature than corn, and resists frost in spring and fall, thus enjoying in this climate a much longer growing season than corn."

"This crop, because of its weight per cubic foot, can be safely stored in the trench silo. Such a type of silo brings this class of fodder within the reach of thousands of dairymen. It means more than this to many farmers, for many of them will now be enabled to engage in mixed farming, keep dairy cattle, and thus stay on the land and get on their feet, whereas prior to the advent of this crop they were facing defeat and despair."

Other Silos
"In recommending the trench silo, I do not for a moment disparage any of the types of silos now in use as a means of storing feed. They have one disadvantage, however, and that is that they cost money. The trench silo affords a method of storing feed which is inexpensive apart from labor, and most men who are struggling to get on their feet are willing to make an expenditure of their own labor in order to achieve success."

"The quality of the feed so stored appears to be quite equal to that stored in the ordinary silo. It may be argued that there is a certain loss of moisture by drainage, and the

point is doubtless well taken. "I am certain that the silage stored in the trench will give excellent results, as we are now feeding some sixty-five late summer and fall calves in the open on sunflower silage from the trench silo. These calves are making excellent growth, and I have seen no thrifter lot this year nor at any time. My argument is, therefore, that even though there may be some loss of food value through moisture which drains away from the trench silo, the fodder which remains is highly nutritious and superior to any fodder ordinarily available."

Construction
"The method of construction of the trench silo is simple. It consists of an excavation on a fairly well-drained site. It is not lined with cement or lumber, nor is it provided with curbing to permit the filling of the silo above the surface. It is simply an excavation. It is about eight feet deep, sixteen feet wide and can be as long as desired, depending upon the size of the herd and the material to be stored. It is fed off one end, like a loaf of bread. The daily capacity per animal is from forty to fifty pounds, depending on the quantities of straw, hay or grain, if any, which is being fed. The weight of a cubic foot of ensilage in a trench will average about 35 pounds, and based on the above figures the length of the silo required to accommodate sufficient feed for the herd can be readily determined. The cutting box was set up outside the trench, and a short length of pipe and the hood provided the necessary piping. The silage was distributed and well tramped. This year the trench was filled only to the level of the ground, when it was well-covered with straw from an old stack bottom. I think it would be an improvement to round up the silage above the level of the ground a couple of feet, keeping it well tramped for two or three days. When the silage has finished settling the trench would then be approximately full. The straw or other covering to be used could then be put on. The trench method of storing has kept the silage with practically no loss and the quality of the fodder, as I have already said, is first-class."

Conditions Demand Economy.
"Conditions demand the strictest economy in the handling of any of our fodder propositions, and if the dairyman is prepared to do some manual labor in the way of cutting the crop by hand, the only equipment that he will require in order to provide his stock with ensilage is a cutting box, the cost of production of which could be handled by the community or a group of farmers, so that the cost would be a very small amount for each member of the "Silo Association" as it might be termed."

"In conclusion I simply want to point out that this matter has been sufficiently tested to remove doubt as to its feasibility. We have at hand in western Canada means by which the cost of production of dairy products can be reduced twenty to thirty per cent. in areas which have been dairying under former methods, which includes practically all western Canada. Figures indicate that a reduction of twenty per cent. in the cost of production of dairy products would mean a saving of nine million, six hundred and sixty-six thousand dollars."
