POISON IVY GETS DANCERS

New York, June 8.—Paul Popolous today cancelled an engagement he had made to appear with his 16 pupils of the classic dance in a moonlight presentation at the Westchester Country Club.

The reason, he said, was that a bed of poison ivy, virulent cousin to the vine with which classic brows were wreathed, was unwittingly chosen as the stage for the last "dress" rehearsal.

Some of the dancers were blistered to the knees. Others, Popolous said, suffered more extensively.

Maybe Lot's wife looked back to get another slant at the new hat on the woman she had just passed.

CORNS STOP ACHING, QUICKLY DISSOLVE AWAY

Immediate Relief Comes With First Application.

Success Guaranteed!

The misery of a sore corn comes to an end quickly when you apply Putnam's Corn Extractor. This statement means just what it says, and you can easily prove it in your own case. Full directions are given in each package for the hot water treatment, and for applying a few drops of Putnam's to the spot that is sore. You won't be disappointed. Putnam's is not an extract that painlessly removes warts, corns, callouses and thickened foot lumps. Sold for 25 cents by all good dealers.

APOLOGIES FOR GREEK CANARD

London, June 8.—The Ionian Bank and the Bank of Athens which a dispatch to the Daily Express from Athens yesterday said had been sufferers from a financial panic in the Greek capital have informed the newspaper that the Athens report was entirely untrue. They declare that they suffered no loss whatever. The Daily Express this morning prints an apology for the story in big type.

SPEED IN A TIN CAN.

The professor was trying to demonstrate a simple experiment in the generation of steam.

"What have I in my hand?" he asked. "A tin can came the answer. Very true. Is the can an animate or inanimate object?"

Inanimate.

Exactly. Now can any little boy or girl tell me how with this tin can it is possible to generate a surprising amount of speed and power almost beyond control?

One little boy raised his right hand. You may answer, Carter.

"Tie it to a dog's tail"

PAINFUL JEWELRY.

Anna—Is having the ears pierced for earrings painful?

Bella—Not half so much as allowing them to be bored for an engagement ring.

NORMAL SCHOOL STUDENTS WERE AT HOME TO THEIR FRIENDS FRIDAY NIGHT

(Continued from Page 2.)

great episode in our lives, and we are happy to feel that we have so successfully accomplished the tasks set before us during this year. But our pleasure is commingled with sadness for tonight we must sever these bands of friendship, which have existed between us and our class mates throughout this school year. Not only have we become attached to one another as well as to our teachers, but we have also learned to love this old building, itself, in which have developed some of the greatest minds of our fair Dominion.

We owe a great debt to Dr. Bridges our principal, and his colleagues, for indeed they have put forth their best efforts in our behalf. They have set us examples by their work which, if we heed, can but lead us to success. They have done more for us than we can hope to repay, but we shall go forth from this school, filled with a determination to better the educational conditions of this province and to instill into as many minds as possible these great principles and ideals placed before us in this noble institution.

A Stepping Stone

Many of us may use our teaching profession as a mere stepping stone to other walks of life, but all of us will remember this year spent at the Provincial Normal School and we shall treasure it among the most profitable years of our lives.

We must not forget tonight the members of our Board of Education, in whose hands has been placed the greatest of all responsibilities, that of promoting the interests of education in our province. They have taken a faithful interest in our school, and have done all in their power to enable students to attend it.

Large Class

Our classes of 1923 are the largest ever registered in the history of the Normal School. This year, as never before, it was necessary to form a class composed solely of boys. Our building has been filled to its greatest capacity, but, thanks to the untiring efforts of our faculty, we have been deprived of nothing in our course. During the last year our boys have brought great credit to our school through their prowess in athletics.

WHEN DOES BRONCHIAL TROUBLE BEGIN TO GET SERIOUS?

First it was a little throat tickle, then a cough which grows severe. This neglected cough travels down the lungs, and it's mighty hard to treat. To treat throat trouble right, use Catarrhoxone. It heals the sore spots, allays irritation, eases the cough, makes breathing regular, clears out the phlegm and frees the nostrils from crusts and accumulations. You can prevent colds, and keep free from Catarrh and bronchial trouble.

Our basket ball team especially has proved itself worthy the honor of ranking with the best ever organized in this institution. Our boys composed the only team in the Inter-Scholastic Basket Ball League of the province which was able to defeat the Routhes boys in their own gym. As a result of their strenuous training, directed by a most competent coach, in the person of Sergeant Major Oliver, they brought their season to a close, tying with Fredericton High School for second place in the Inter-Scholastic League. We were also fortunate in having with us this year a coming athlete in the person of Ralph MacCreedy, who proved that the Normal School boys were no mean competitors in the Inter-Scholarship track meet held in May.

The Great Adventure

We are now about to launch our lives into the great adventurous sea of life. We are no longer students, and yet in a wider sense, we are only beginning to study. Tonight we know little of the responsibilities and cares of this world, which, up to this time, our parents and teachers have willingly borne for us, but tomorrow the open door is before us through which we must pass and shape our own destinies. Let us face our professional calling, or whatever work we may choose, with an undaunted spirit, and let us ever strive to be numbered among those who have brought credit and honor to this institution. When difficulties confront us, let us not be discouraged, but "Carry on", as the boys used to say, and with our minds set ever on our goal, failure will surely hide itself. To this institution we came, that we might be made more efficient and better prepared to undertake the great work, which we have chosen. Here, through able teaching and good example, we have acquired those great principles, which comprise the beauties of life itself, and which if we use will bear us to that flood, which sweeps ever on to the harbour of success.

In Conclusion

The people of Fredericton have treated us with kindness. The churches have opened their doors to us and the Christian people their hearts, we thank them heartily and shall never forget their kindness. To the faculty of our Normal School, we wish continued success. To the old building, itself, we say, Hall and Farewell.

EDWIN A. STUART.

ROOT MAGGOTS CONTROLLED BY INSECTICIDES

The corrosive sublimate treatment is now regarded as the most economical and efficient method of controlling the cabbage maggot, says a recent pamphlet issued by the Dominion Department of Agriculture, Ottawa. Radishes, garden and field turnips, cabbages and cauliflowers may all be treated with this substance without fear of injury. At least two treatments in the spring or early summer are necessary, but three are advisable in the majority of cases. Not only are the plants rendered free from attack by the treatment, but the effect on their growth is beneficial. Corrosive sublimate is used at the rate of one ounce to ten gallons of water and should be applied to the stem and roots of each plant at weekly intervals after egg-laying has commenced, which in most sections of Canada is usually about the middle of May in a normal season. On the Pacific Coast of British Columbia however, eggs may be laid early in April.

The Onion Maggot

For control of the onion maggot, two methods that have been found satisfactory, namely, the poisoned bait method and the trap crop method. When the flies are active which occurs especially on bright, warm, sunny days, the following bait can be beneficially used: Sodium arsenite $\frac{1}{4}$ to $\frac{1}{2}$ an ounce dissolved in a gallon of boiling water and a pint of molasses added. Place from twenty to forty pans, dishes, china saucers, filled with the bait, on the soil surface of each acre when the seedling onions are from $1\frac{1}{2}$ to 3 inches high, and then on four or five later occasions as warranted. Excellent results have also been obtained by sprinkling the bait mixture in large drops over the soil and foliage of onions and neighboring vegetation.

Under the trap crop method, the culls of last season's crop are planted, 100 feet apart. Their earlier leaf growth attracts the fly. The trap plants are pulled up about June 15 and destroyed.

It should be remembered that both poisons are extremely virulent and should be kept out of reach.

The pamphlet referred to, is entitled "Root Maggots and Their Control", and can be had free on request.

A "health Sunday" is being arranged. One way to keep in good health on Sunday is to stay at home after going to church.
