McCORMICK-DEERING

POTATO DIGGER

The McCormick-Deering Digger changes the hardest job in potato growing to almost a pleasure. It speeds up the harvest, does away with a lot of hired help and cuts harvest costs so low that a good profit is assured.

To see for yourself the superior construction of McCormick-Deering Diggers call at our sales room and make a personal inspection. The performance of this Digger is well known by farmers in this vicinity who will tell you of the ability of this machine to stand up to this hard work—dig the potatoes clean without damaging them and leave them so that they are easy to pick up.

McCORMICK-DEERING POTATO DIGGERS AND SERVICE.

DEVELOPMENT OF PEAT BOGS IN NEW BRUNSWICK IS ATTRACTING ATTENTION

(The New York Sun, Editorial, August 5th.)

Peat is popularly associated with Ireland, in which country peat bogs are unusually plentiful and poets abound to sing of its fumes. However, imports of German and Dutch peat moss at North Atlantic ports have been increasing in response to the demands of American florists and landscape gardeners. Now Canada is entering the industry. A company backed by American and Montreal capital has been formed to exploit bogs near St. Stephen, New Brunswick, and to ship moss.

In addition to use in floral work the moss is employed in making new lawns. Peat bogs covering about 225,000 acres are situated in all parts of eastern Canada. The plant at St. Stephen is nearly completed and it is estimated that shipment will amount to 5,000 tons annually.

Peat—or bog—moss, also known as sphagnum, was gathered and prepared

in large quantities during the world war by voluntary qualities for use as a surgical dressing. Its highly absorbent qualities make it especially valuable for this purpose. Peat consists of the remains of sphagnum together with partially preserved remains of vegetation swamped and killed by its overgrowth. It owes its preservative power to its content of humic acid.

During the latter years of the great war peat came into greater use as a fuel, due to the scarcity and cost of coal, and this augmented use has continued since. Bacterized peat is now manufactured into blankets, carpets, rugs, wadding, paper and cardboard, and also produces peat gas for power purposes. It is also largely used in the cultivation of bulbs and other plants. The United States has vast peat deposits; it is estimated that, excluding Alaska there are 12,885,500,000 tons available in this country.

OFFICER OF U. S. NAVY GETS A REAL THRILL

(Continued from page eight)

fly here this season. The big fellow gave him a battle royal and he was over an hour bringing it to the gaff. That the Lieutenant Commander and his better half who witnessed his battle with the peer of all game fishes was delighted goes without saying. After landing the fish Lieut. Ainsworth motored to the city and shipped it to his home in Annapolis.

Are Guest Visitors

Lieut. Commander Ainsworth and wife arrived here during the week-end and are guests of their friends Mr. and Mrs. W. L. Heiberg at the Windsor Hotel. They plan to remain for the rest of the week. Mr. and Mrs. Heiberg and daughter, Jean, came to Fredericton six weeks ago and have been having the time of their lives. They own a summer home at Woodstock, Vermont but because of the lure of New Brunswick they have not seen much of it this summer.

Mr. Heiberg owns a movie camera which takes colored pictures and he made good use of it when Lieut. Commander Ainsworth was battling with his fish.

This morning Mrs. Ainsworth, who like her husband is a novice at the game, hooked and landed a nice salmon at the Hart's Island pool. She hooked another but it made a getaway. Mrs. Ainsworth is naturally delighted with her success as an angler.

EIGHTH ANNUAL FIELD DAY AT EXPR. STATION

(Continued from page eight)

dissolve the skepticism of some of the poultry men.

Annual Meeting.

Following this the N. B. Poultry Producers Association held their annual meeting and listened to an outlining report of the year's work and so to lunch.

After lunch the men inspected the farm.

The Registered Poultry Breeders' Association then elected officers for the coming season, following which the entire convention met in the Agricultural Hall and was addressed by Dr. C. H. Weaver, animal pathologist of Ottawa on poultry diseases and methods of control and prevention. An open discussion on the matter headed by Mr. S. L. Wood was productive of many practical suggestions.

Mr. W. A. Brown, Chief Poultry Expert of the Dominion Livestock Branch, Ottawa spoke on the Canadian Poultry situation. The day's work was concluded with an experiment conducted by Dr. Weaver and Mr. Taylor, demonstrating the use of blood tests in determining disease. Dr. Weaver in the course of his remarks pointed out that "colorum" could be eliminated if the use of blood tests was more widely adopted.

Mr. and Mrs. Julius Morrison, Mr. and Mrs. John Morrison and child, of Philadelphia, arrived here yesterday by automobile and are the guests of Mrs. J. A. Morrison.

AMERICANS ARE ARDENT TEA DRINKERS

Montreal, Aug. 18—Americans staying or travelling in Canada for any length of time become ardent tea drinkers, says Walter Pratt, General Manager of Sleeping and Dining Cars of the Canadian National Railways. The reason for this, Mr. Pratt adds, is not that Americans are unable to obtain in the Dominion the coffee they are accustomed to in the United States, but that they become acquainted many of them for the first time, with some of the excellent properties of tea as a beverage.

Generally speaking, Canadians and English people favor tea as opposed to coffee for general use. Americans, on the other hand, are known as coffee drinkers.

The numbers of people travelling in Canada from the United States of recent years undoubtedly has directed the attention of Canadian cooks and caterers more to the making of coffee than before. Coffee on the dining cars of the Canadian National Railways, where tens of thousands of Americans travel each summer, is made carefully.

Only one gallon of coffee is made at one preparation on a dining car. Full attention is given to "steeping" through a strainer, to procure full value from the coffee.

Tea, points out Mr. Pratt, long before it was popular as a beverage, was used as a medicine, later as vegetable or the main ingredient of sweet stew boiled with rice, chestnuts and condiments. Since tea came in as a beverage merchants have put together various blends making for a palatable drink. Almost all tea nowadays is a blend.

The most important factor in making good tea is to put in the proper quantity and to steep it with fresh boiling water. It should be made a few minutes before it is required for use and allowed to stand for the necessary steeping. Tea, if possible, should be made in an earthenware pot and prepared in small quantities at a time.

Camping and trail parties in the Rocky Mountains greatly favor tea as compared to coffee for an outdoor drink. This may be because it is quicker to make or because it has a greater immediate stimulating effect.

Died Here Yesterday

The death occurred here yesterday, of Dr. Harold F. E. Wilkes, at his home 138 Brunswick street at the age of 34 years, following an illness of a short time. Deceased removed here from Saint John only a month ago, and has not been in good health since his arrival. He was the son of J. Harry Wilkes, formerly of this city, and is survived by besides his parent, several brothers and sisters, his widow and one child at home. The late Dr. Wilkes had been engaged in business in Saint John as a dentist for some time and had only recently come here as the result of advice from his doctor. The body will be taken tomorrow morning to his former in Saint John from where burial will take place.

INTERNATIONAL NICKEL IS HOLDING UP WELL TODAY

The stock market today was active and there was a stiffening up of prices in many issues. Call Money continued at seven per cent, United States Steel sold at 250%.

On the Montreal Exchange, Steel of Canada, Common and Shawinigan had fractional advances but Nickel and Brazilian had fractional declines.

LONDON NOW FAVORS THE LADY SLEUTHS

London, Aug. 21—The Lady detective is coming into her own in London society, whose season is annually growing more elaborate. More costly plate is used, more jewels are in evidence and there are more gate crashers. London hostesses have found that the best safeguard to their functions is not a large flat-footed man, but a svelte, chicly-gowned woman who can mingle with the guests and arouse no undue suspicion.

Most of the women detectives have their own business and their own clientele. They are well acquainted with the outstanding members of the petty thieving tribe and can readily spot them on a crowded ballroom floor around a closely-packed dinner table or at a wedding where costly gifts are within easy reach of itching fingers.

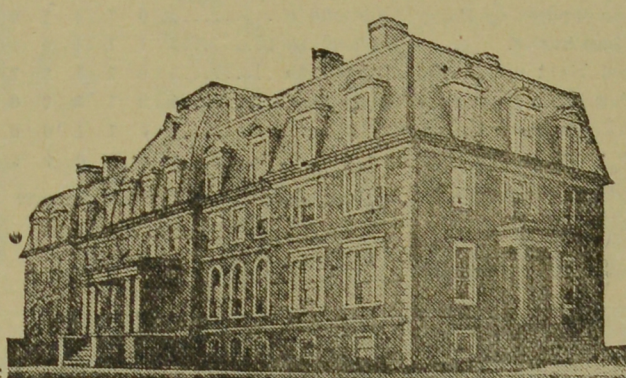

Late Harry G. Clark

The funeral of the late Harry G. Clark, who died yesterday morning, took place this afternoon from his late home in 617 Campbell street, with prayers at 1.50 o'clock by Rev. A. F. Bate. Service was conducted at the Church of St. Marguerite, at three o'clock by Rev. Henry J. Hoyt, assisted by Rev. A. F. Bate, and interment was made in the adjoining cemetery. A large number of friends and relatives of the deceased attended the service.

FREE VACCINATION

Dr. Loggie, Medical School Inspector, will be at the High School, George Street Thursday, August 22nd from 11 o'clock to 12 a. m. and from 1.30 to 4.30 p. m. for the purpose of vaccinating children entering Fredericton Schools.

ANNIE J. MACNUTT, Sec. Sub-District Board of Health.

University of New Brunswick FREDERICTON, N. B.

Session 1929-30 Begins September 19.

Courses in Arts and Pure Science

Special courses arranged for those intending to enter Medical and Law Schools, etc.

Modern well-equipped Laboratories. Excellent opportunities for specialization in regular courses.

Courses in Engineering and Forestry

Complete courses extending over four years and leading to the Degree of B. Sc. in Engineering or Forestry.
